Late-medieval England witnessed a remarkable rise in the prominence of poetry and the sophistication of the English vernacular, to which both writers and readers contributed in fundamental ways. But while the transition of the medieval writer into the modern author, with a modern understanding of authority and the ownership of a text, has been extensively studied, the crucial role of the reader has been overlooked.

Tracing affinities between digital and medieval media, this book explores how participation helped to define reading practices and shape relations between writers and readers from the late fourteenth to early sixteenth centuries. It draws on a wide variety of works – from Chaucer to banqueting poems and wall-texts – to demonstrate how medieval writers and readers engaged with practices familiar in digital media today. This includes such apparently modern ideas as crowd-sourced editing, nonlinear apprehension, mobility, temporality and forensic materiality. Writers turned to these practices in order to control readers’ engagement in ways that would benefit their reputations and encourage the transmission and interpretation of their texts. Readers, meanwhile, pursued their own agendas, which often conflicted with or simply ignored writers’ intentions.

Shedding light on a previously unexplored area, Participatory reading in late-medieval England will be of interest to students and scholars of medieval literature and the history of the book, as well as those interested in the long history of media studies.

Series founded by: J. J. Anderson and Gail Ashton

Advisory board: Ruth Evans, Nicola McDonald, Andrew James Johnston, Sarah Salih, Larry Scanlon and Stephanie Trigg

Manchester Medieval Literature and Culture publishes monographs and essay collections comprising new research informed by current critical methodologies on the literary cultures of the Middle Ages. We are interested in all periods, from the early Middle Ages through to the late, and we include post-medieval engagements with and representations of the medieval period (or ‘medievalism’). ‘Literature’ is taken in a broad sense, to include the many different medieval genres: imaginative, historical, political, scientific, religious. While we welcome contributions on the diverse cultures of medieval Britain and are happy to receive submissions on Anglo-Norman, Anglo-Latin and Celtic writings, we are also open to work on the Middle Ages in Europe more widely, and beyond.

Titles Available in the Series

6. A knight’s legacy: Mandeville and Mandevillian lore in early modern England
   Ladan Niayesh (ed.)

7. Rethinking the South English Legendaries
   Heather Blurton and Jocelyn Wogan-Browne (eds)

8. Between earth and heaven: Liminality and the Ascension of Christ in Anglo-Saxon literature
   Johanna Kramer

9. Transporting Chaucer
   Helen Barr

10. Sanctity as literature in late medieval Britain
    Eva von Contzen and Anke Bernau (eds)

11. Reading Robin Hood: Content, form and reception in the outlaw myth
    Stephen Knight

    Mark Allen and Stephanie Amsel

13. Roadworks: Medieval Britain, medieval roads
    Valerie Allen and Ruth Evans (eds)

14. Love, history and emotion in Chaucer and Shakespeare: Troilus and Criseyde and Troilus and Cressida
    Andrew James Johnston, Russell West-Pavlov and Elisabeth Kempf (eds)

15. The Scottish Legendary: Towards a poetics of hagiographic narration
    Eva von Contzen

16. Nonhuman voices in Anglo-Saxon literature and material culture
    James Paz

17. The church as sacred space in Middle English literature and culture
    Laura Varnam

18. Aspects of knowledge: Preserving and reinventing traditions of learning in the Middle Ages
    Marilina Cesario and Hugh Magennis (eds)

19. Visions and ruins: Cultural memory and the untimely Middle Ages
    Joshua Davies
Participatory reading in late-medieval England

As will surprise no readers of a work focused on participation, its production involved the support and contributions of many members of my family, friends, and communities of colleagues. I would like to thank them for their aid and contributions, great and small.

To Mary Erler, Martin Chase, Mary Bly, and Jocelyn Wogan-Brown, who read and commented on the nascent version of this book when it began life as a dissertation, most sincere thanks. My grateful appreciation goes to James Sutton, Nathaniel Cadle, Jason Pearl of the Department of English at Florida International University for welcoming me when I arrived, and supporting me in the years that have followed as I laboured to bring this book to fruition. Jason and Nathaniel, to you, Nandini Dhar, Martha Schoolman, Wanda Raiford, and Vanessa Sohan, I offer my heartfelt thanks for wise counsel, helpful feedback, and timely prodding. I would also like to thank Tovah Bender for critical insights on the framing of this book, and Mary Flannery and Carrie Griffin for their suggestions on a chapter, and the encouragement their interest provided to my work on the whole. To other colleagues and friends, Janice McCoy, Erika Harlitz Kern, Rhona Trauvitch, Allison Adair, Mary Kate Hurley, and Sarah Noonan, thank you for wading through drafts early and late, and offering the insights and suggestions that improved it immeasurably. My appreciation to Elizaveta Strakhov for her enthusiasm over my naming of ‘extra-codexical texts’, which inspired me to engage in the timely and necessary revision needed to incorporate it here. To Lois Swales, who worked with me on a project that became the seed that led me to study medieval reading practices, thank you. Maija Birenbaum assisted me with some tricky bits of the French of England, for which I’m very appreciative. For brief, but influential comments at conferences that encouraged me to continue work at pivotal
moments, I thank Robert Yeager, Michael Sargent, Holly Crocker, Martin Foys, Julia Boffey, and Christopher Baswell.

My appreciation extends to the staff members who assisted me at the Morgan Library & Museum, the Newberry Library, the British Library, the Bodleian Library, and the Special Collections department at the University of Chicago. Finally, to the editors and anonymous readers at Manchester University Press, my thanks for your feedback, which helped to make this a better book.

Introduction: Reading practices and participation in digital and medieval media

‘Where is the moralizynge?’ So asked a friend of the early fifteenth-century clerk and writer Thomas Hoccleve when shown a copy of Hoccleve’s newly translated poem ‘Jereslaus’ Wife’. Hoccleve describes this exchange in his long poem Dialogue, in which he explains that he had ‘endid’ the tale a ‘wike or two’ before his friend visited. Taking up the work, the friend read the poem eagerly, but objected to its ending. After storming home for his copy of Hoccleve’s source, the friend returned, book in hand, to regale Hoccleve with the moral. In response, Hoccleve adds it following the end of his poem.\(^1\)

The interaction Hoccleve describes represents one of the under-reported ways in which medieval readers could participate in the development of texts. Hoccleve clearly views his work in translating and composing the tale as finished and complete before his friend confronts him with an alternative view of the work that prompts Hoccleve to add the interlude and the moralizing. He then identifies the moral as an addition for which his friendly reader holds responsibility. His friend’s participation alters both the text itself, through the provision of an explicit moral, and Hoccleve’s own nascent role as author. This alteration enacted through participation responds to the reader’s casual assumption that he possesses authority sufficient to counter Hoccleve’s own authority. Neither he nor Hoccleve view the writer as the sole determinant of the work. Instead, his friend asserts authority as a reader to contribute to Hoccleve’s work, and the friend’s suggestions lead to its modification.

This relationship Hoccleve depicts between a writer who accepts and responds to the authority of a reader occurs at a critical moment in the history of medieval English literature. From the late fourteenth to the early sixteenth centuries, expanding literacy among the upwardly mobile mercantile and professional classes
of England created new audiences desirous of vernacular reading material. At the same time, writers approached composition in Middle English with increasing interest and vigour, exploring the shifting boundaries of their role in the transition from the medieval writer – subordinate to the creativity and influence of the authorities of antiquity – to the modern notion of the author as the sole creator of unique works.

To the culture of late-medieval England that witnessed the rising prominence of poetry, and the growing facility of the English vernacular, both writers and readers contributed in fundamental ways, among which can be included the shaping of their own roles. Although the transition of the medieval writer into the modern author, with a modern author’s understanding of authority and creative ownership of a text, has been well studied, the reader plays an often overlooked, albeit central role. For, among the topics to which late-medieval English writers repeatedly turn when considering both their authority and that of their texts, the issue of what readers, not just writers, should do develops as a central concern. This both recognizes the identity of an English reading public, as Katharine Breen has discussed, while building on that recognition to consider what the lay vernacular reader could and might do. Hoccleve’s friend did not volunteer this response to Hoccleve’s work without context or precedent: Writers in late-medieval England imagine readers as possessing the authority to change the text, turn a page, or move away from a work, all modes of participation, and they established a discourse that emphasized these and other modes of readers’ participation. Along with recognizing readers’ capabilities, writers also recognize both the potential and the threat offered by this participation to support or undermine writers’ own authority. In other words, the attention paid to writerly authority is incomplete without attending to its complement, readerly authority; one cannot understand medieval writers without understanding also medieval readers, their relations to each other, and the profound role played by readers – both through the ways writers anticipated their participation, and as readers effected it. It is this subject of participation that provides the basis for this study, and offers a needed corrective to a view of medieval literature dominated by the role of writers. How was the participation of readers elicited by writers and texts? What readers were invited to participate? And what did their participation achieve for themselves or others?
The context: reading, participation, and agency

The central subject of this project thus focuses on participation, a concept for which I am indebted to digital media studies. Perhaps because of the autobiographical self-interest of a writer raised in a print-centric culture but currently inhabiting a culture impacted by a new technology of writing and reading technology, I find great interest in studying a culture on the cusp of a parallel, earlier change. Yet beyond the bounds of self-interest, digital media can offer much to those studying media studies, literary culture, and book history in the late Middle Ages. In digital media, participation relates to interaction, which together have been used to emphasize the ground-breaking nature of the digital, initially perceived as setting ‘new’ media aside from ‘old’ media. While that divisive view has since diminished in the current approaches of digital media studies, which recognize greater continuity among historical forms of media, the attention given to participation still proves beneficial for current work. Henry Jenkins, who coined the term ‘participatory culture’, offers a useful distinction between participation and interaction, which might otherwise seem synonymous. Interaction is mediated by tools; clicking a link that takes one from one web page to another constitutes interaction. Participation, in contrast, develops through social relations, casting light upon not simply the technology, but also the culture it shapes and by which it is shaped. To use participation as a concept through which one can scrutinize a literary culture requires evaluating the processes and procedures that condition relations between, for example, medieval readers and writers, who interact through the technology of the manuscript or printed text. Participation thus creates the grounds for studying interactions among the different facets that contribute to medieval literary culture in general: writer–reader relations, the materiality of medieval manuscripts, reading practices, and the book as a technology.

In late-medieval England, developing participatory reading practices often centres around eliciting and guiding readers’ choices. Consequently, the participatory reading practices I focus on can be described as ‘proleptic’ reading, which is determined in advance of the moment of reading. Writers recommend or use their texts to model a variety of practices that seek to elicit, shape, and frame the choices readers might make as they apprehend texts. Focusing on participation as a determining condition of medieval literary expression and interpretation enables a reframing of the
Participatory reading in late-medieval England

traditional approaches to studying relationships between writers and readers and texts in medieval literary culture, in which the work and aims of writers occupy the centre frame, and readers are considered secondarily for the evidence they provide supporting assessments of those writers. In attending to participatory reading, it is readers who occupy the central role, and the work of writers supplies the evidence needed to understand perceptions about and constructions of readers’ roles and capabilities in late-medieval literary culture.

Attending to the choices medieval readers were encouraged to make – and the choices they then chose to make – thus necessitates considering how writers anticipated that readers might express agency. Agency itself has generated much enthusiasm among critics of digital media. Such critics have viewed digitally mediated interaction and participation as anticipating and instantiating post-structuralist, postmodern theories of the open text. Representing the first wave of new media criticism, George Landow argued that hypertext, for example, ‘provides an infinitely recenterable system whose provisional point of focus depends upon the reader, who becomes a truly active reader’ by choosing the order in which to link together sections of a hypermedia work. In contrast, the experience of reading a novel or other traditional print text was perceived as supporting ‘passive’ reading, which conveyed readers from beginning to end of a work without necessitating their input.

Criticism that partook of this and similar views thus often supported anxieties about the book, and even touted its demise.

Yet such discourse has not gone unchallenged. Scholars of digital media have since resisted the liberatory and excessively democratizing rhetoric of earlier criticism to argue that digital media in many cases perpetuates, if not increases, restrictions on interactors. Considering such, Henning Ziegler highlights how digital media creates these restrictions through the very mechanism that had previously been lauded as the hallmark of digital media’s liberation from the passivity and fixity of print: the hyperlink. Ziegler explains that ‘The link necessarily partakes in a hegemonic framework that actually highlights the limits of choice rather than its possibilities.’ Ziegler emphasizes that, by creating coded links within a work of hypermedia, writers and designers restrict the ability of readers to determine extra- or intertextual connections for themselves. In consequence, the choices readers can easily effect are limited to the links presented to them. Ziegler’s assessment does not stand alone.
Critics now argue that digital media can disempower users and provide mechanisms for their restraint. For example, as one critic has observed, ‘[A]uthors may actually have more control over the work than in conventional fiction, where readers are free to read the end of the story first if they wish’. In the field of popular media, journalist Nicolas Carr turns to print history, and even the culture of medieval manuscripts, to argue that today’s digital media negatively affect intelligence and attentiveness. As these and similar comments suggest, examining how participation functions in a particular work or media context can raise awareness of how its accompanying instructions or design can facilitate or restrict agency. These critiques, however, all too often elide use and the discourse and evidence of subsequent use, focusing instead on the technology in acts of technological determinism – suggesting that technology itself controls behaviour.

In contrast, I do not focus exclusively on the manuscript as the technology through which participation emerges. Rather, I examine how the social mediation of participation manifests through late-medieval English reading practices, which may rely on or function independently of manuscript technology. Indeed, many of the practices studied here continue well into the early age of print, and other practices rely on media other than the manuscript, giving rise to what I call – and discuss further in Chapter 3 as – ‘extracodexical’ texts. What takes centre stage in place of the manuscript and alternative media are the choices enjoined upon and elicited from readers through the activity of reading. I therefore offer an overarching argument about how the modes of participatory reading examined here represent practices elicited for and applied to socially contextualized purposes. As each of the chapters examines a particular practice, whether as modelled in a text, elicited from readers through the guidance of writers, or necessitated by the interpretive demands of texts themselves, I demonstrate how the medieval work of reading is viewed and enacted through readers’ participatory work. In other words, I use connections between digital and medieval media to illuminate constructions of readers and reading practices; in so doing, I explore their contributory role in shaping late-medieval literary culture.

**Medieval media, digital media, and book history**

Tracing the affinities between participation in digital and medieval literary cultures situates the medieval as participating in the long
history of media forms and practices. This project is not the only to have broken ground in exploring the relevance of the digital to the medieval; engaging with digital media criticism and theory has gained standing in recent years as scholars identify productive ways to initiate these cross-temporal studies. Martin Foys's *Virtually Anglo-Saxon* represents an early, influential pathbreaker that demonstrated how digital media might contrast usefully with medieval media in ways that demonstrated the historical specificity of each period's media. Focusing on one particular genre of digital and print media, the multi-threaded narrative, Andrew Higl explored how this genre might illuminate readers' ludic engagement with early manuscripts of the *Canterbury Tales*. With a similarly tight focus, Seeta Chaganti analysed virtuality in the medieval *danse macabre*. Chaganti argues that dance provided a metaphor for interpretation that evokes virtual reality in response to a single poem. These and *Participatory reading in late-medieval England* demonstrate that perspectives offered by interdisciplinary engagement with digital media studies continue to offer medieval studies productive ways of rethinking our assumptions about medieval literature and culture.

In particular, examining participation in late-medieval literary culture through the perspectives offered by digital media criticism and theory facilitates identification and evaluation of the processes and procedures that shaped how readers engaged with works, interpreted texts, thought of authors, and practised reading. Indeed, focusing on participation in late-medieval English literary culture reveals how commonly writers turn to participation as a mode of reading in order to envision possibilities for interaction among themselves, their texts, and their readers, and both facilitate as well as constrain those possibilities in order to try achieving ones viewed as desirable. This historical moment illuminates a period that categorically differs from that of previous periods in which vernacular, lay readers' participation is an occasional act, not a sustained focus of attention. Furthermore, how writers treat readers from the fourteenth to early sixteenth centuries anticipates and relates to many similar concerns in later literature, particularly in the current digital era. Consequently, the way that late-medieval writers anticipate, depict, model, and shape reader participation demonstrates a developing understanding of readers as participants, and a growing reliance upon and expectation of their participation – in other words, a literary culture focused on ways to make readers work.
Analysing the role of reader participation in late-medieval English literary culture consequently provides an opportunity to inform the history of books and reading with the approaches of contemporary digital media theory and criticism. As the critic Thomas Pettitt has suggested when arguing for the idea of a ‘Gutenberg Parenthesis’, in which pre- and post-print media share more in common with each other than either does with print media, medieval literature and modern digital culture intersect in a variety of ways. As I trace these historical intersections of medieval and digital media studies through participatory practices, I show how experiences now perceived as characteristic of digital media, such as open emendation, nonlinear apprehension, and immersion, offer parallels to practices that emerge in the context of medieval reading.

To help provide a framework through which to identify and assess these practices, I thus turn to digital media criticism, in which studies of the ‘new literacies’ required by digital media have flourished. Reading has come under scrutiny in digital media studies partly because the remediation of texts into digital formats, along with the new possibilities for design and artistry in digital media, have led to questioning the nature of the reading experiences such works prompt. For example, in the iPad work *Pry*, whose creators identify it as both a novella and a ‘book without borders’, how much does the experience of apprehending it resemble reading when the work required involves not only comprehension of text, image, and video, but also manipulation of the screen via using one’s fingers to ‘pry’ open the eyes of the paralysed main character? To help distinguish how digital media constitute and facilitate reading, one model of reading applied to digital media proposes distinguishing among three different, but overlapping acts: manipulation (the processes of handling a text), comprehension (understanding a work), and interpretation (the relationship between the text and the context, such as other texts, the reader applies to its explanation). As the term ‘manipulation’ suggests, critics view this reading act in relation to physical engagement with a text, whether in digital or print form; such an approach needs modification for the literacy conditions of the late Middle Ages, in which reading might not require physically engaging with a text. I refer to this task more generally as apprehension, which involves processes that can include but are not restricted to manipulation.

This methodology thus positions *Participatory reading in late-medieval England* as drawing on three disciplinary modes of
Participatory reading in late-medieval England

In this context of the relationship between reading and changes in media culture, participation not only offers a discourse and procedures to shape relations between writers, readers, and texts,
but also becomes a framework used by writers to explore the developing authority of themselves and their texts, and the limits of this authority when contrasted to that of readers, thus casting light upon the literary culture of late-medieval England. Such concerns were vital in the context of the rapid expansion of lay literacy that characterizes England from the late fourteenth through early sixteenth centuries. As has become a critical commonplace to note, assessment of literacy proves a slippery issue, in part because literate practice in the Middle Ages involved skills that did not necessarily require an individual ability to read. Rebecca Krug thus advocates for the term ‘literate practice’, which acknowledges how literacy among vernacular readers in late-medieval England could encompass a range of skills.\(^{16}\) Offering a useful way to frame the various skills that could be involved in literate practice, Paul Saenger distinguishes between ‘phonetic literacy’ and ‘comprehension literacy’, where phonetic literacy marks a reader able to sound out words and pronounce them orally, whether in English or through that mainstay of the popular medieval book trade, the Latin book of hours. Comprehension literacy involves gazing upon a written text and apprehending it silently and fully.\(^{17}\) Estimates of literacy consequently vary. Conservative estimates suggest perhaps as little as 5 per cent of the overall population could read, but in urban locations perhaps as much as 50 per cent of the male population could read English. This expansion was concentrated among the mercantile, gentry, and noble classes for whom literacy and literary engagement marked opportunities for developing social prestige. Late-medieval England represents a period and place characterized by developments in literate skills that are concentrated in urban locales and expand down the social scale.\(^{18}\)

In consequence of these changes, the growing audience of vernacular readers in this period evidences eagerness for new works, and eagerness for instruction, while not sharing in the formal training and sophisticated Latinate practices writers themselves possessed. At the same time, writers were becoming increasingly aware of and interested in their own authority and ownership of their literary work. This increased interest in writers’ authority marks the transition from the early medieval notion of a writer who copies and reworks the ideas of ancient authorities to the modern notion of an author who bears the authority and responsibility of original, creative production.\(^{19}\) Yet writers did not define themselves solely in contrast to ancient authorities and other writers. Readers, too, played a vital role. They could support or upset a writer’s plans for
his text and, by extension, his reputation; readers could also read in ways that supported beneficial interpretations of a text, or not read in such a productive way. Thus readers were, in their actions and in their potential, figures whose status provoked the ongoing interest and concern of writers. Readers presented the potential for productive partnership with writers through their participatory engagement with texts even as they simultaneously proffered the possibility of disruptive work. By distinguishing themselves from readers, and by exerting control over them, writers both emphasized their own authority and promoted a particular ideology of readerly identity and readerly work as complementary to that of writers, but separate and subordinate. Accordingly, writers in late-medieval England, in order to maintain and develop their own status and engage readers in their projects, focus on how readers can help and hinder through participatory reading practices. What becomes particularly clear in assessing reader participation in England from the late fourteenth to the early sixteenth centuries is that the changing status of writers is accompanied by developments in the role of readers in vernacular literary culture.

Reading practices thus emerge as crucial to the definitional strategies of readers, writers, and their relationships. While the reading practices discussed herein are seldom new to Latin-literate writers, and are often drawn from Latinate scholastic traditions, they are frequently presented to readers treated as unaware of them and in need of education in sophisticated reading practice. These readers occupy a variety of categories, among which approaches to the assessment of reading practices in medieval studies have long focused on distinguishing. Such distinctions have helped draw attention to overlooked communities, such as those of women readers, or have addressed the differences in skill levels between scribes, considered to be professional readers, and the general untrained layperson, considered to be an amateur reader. Other approaches have attended to evidence for the occurrence of reading, as, for example, through marginal annotations or in the layout of a manuscript. Some of the most specific work on reading practices emerges in studies of devotional reading. These latter studies tend to address the experience of reading in particular genres, examining reading for its devotional affect or performative qualities. Yet space remains in which to push consideration of reading further by examining the specific reading processes through which writers urged readers to make meaning of their works and, in the process, shed light on the role made for readers in
late-medieval vernacular culture. Further assessment of reading in these directions is needful particularly because studies of medieval reading often focus on the goal of the reading experience, or the literary genre that forms reading matter; the former can result in mistaking the goal for the process, and the latter can overlook how the same reading practice can be applied or elicited across genres. Focusing on reading through the practice of participation helps illuminate the variety of processes that supported apprehension, as participation itself requires making readers work. Attending to the participatory practices of reading apprehension in late-medieval England also helps distinguish the different modes of reading that contributed in the period to intensive reading, which historians of reading view as characteristic of reading work before the end of the eighteenth century.  

In order to both sketch the outlines of the discourse and practices of participatory reading, I focus on a wide, eclectic range of texts that often circulated independently of each other, and whose authors were seldom responding to one another. While in some cases a writer’s response to an earlier writer’s treatment of a participatory reading practice comes into focus, in most the writers and texts studied herein circulated among different audiences whose common, defining characteristic is their choice of vernacular reading material. In this way, I show how the practices identified and studied herein were not the purview of a small group of writers or their coterie readers, but instead develop, contribute to, and reflect a widespread engagement with participatory reading practices.  

The first section of the book, ‘Participatory discourse’, examines two reading practices writers used explicitly to invite readers’ participation, and details the characteristics and work of readers as constructed through these reading practices. These practices were used by influential writers including Chaucer and Langland, although neither established the practices, which are employed by writers across a variety of genres, secular and religious. Highlighting this widespread use of such practices facilitates recognition of how participatory reading became a prevalent, systematic practice. In this way, participatory reading practices shaped readers’ identities and their relations with writers and texts. The second section of the book, ‘Evoking participation’, reviews texts that elicited particular participatory reading practices not reliant upon explicit descriptions or invitations. Examining the strategies for eliciting participation demonstrates how participatory reading became so
ingrained and expected in late-medieval literary culture that it need not be addressed explicitly, but could nevertheless structure readers’ behaviour and textual interpretations.

Through exploring the shift from invited to elicited participation, two themes emerge throughout *Participatory reading in late-medieval England*: one focused on materiality and the other focused on the body of the reader. Materiality emerges through corrective and nonlinear reading practices, which in different ways involve interaction with the book as material object. Material engagement becomes a way of framing the experience of immersive reading, which also relies on the materiality not simply of objects, but also on the materiality of the reader’s body. In addressing how participatory practices engage the material body of the reader, I show how participatory reading practices evidence a late-medieval awareness of the significance of bodily experience to the work of reading. In other words, studying the participatory work of reading involves assessing how reading was understood as a bodily, embodied activity. Embodiment becomes manifest in reading practice through the mobility of readers in architectural space, through the practice of immersion that led readers to situate themselves as if physically embodied in narratives, and to other reading experiences that rely upon bodily experience and perception. This approach thus expands the understanding of not only the range of medieval participatory reading experiences, but also the roles of medieval multimedia texts.

In Chapter 1, ‘Corrective reading’, I focus on invitations issued to readers by writers who describe a reading practice focused on the process of emendation. Emendation invitations emerge in conjunction with a popular topos of humility, in which the writer expresses insecurity regarding the text. Writers in late-medieval England often add an additional, overlooked feature to the topos: they invite readers to correct the text as they read. This practice of corrective reading relies on a characteristic shared by medieval manuscripts as well as much digital media: that of accessibility to correction. A reader able to write and in possession of a pen and ink might effect changes with almost as much ease as that of a modern reader who can, with only a few clicks of a mouse, add to, edit, or remove passages in a Wikipedia article. In digital media studies, this accessibility to reader intervention is termed ‘openness’. Medieval writers, in their recommendation of corrective reading, reflect a similar awareness of the openness of the material form of manuscripts. Whereas readers’ marginal contributions have
conventionally been studied as individual actions following the act of reading within a specific manuscript, this chapter demonstrates that writers were deeply engaged in shaping the practice of readers’ corrections, seeking to guide how and to what readers responded before readers ever set pen to parchment.

In tracing the boundaries of emendation invitations, Chapter 1 tightens focus on one of the much-studied moments of Chaucer’s *Troilus and Criseyde* that arrive near the poem’s final lines, when Chaucer dedicates the text to his colleagues Gower and Strode, granting them the authority, where ‘ther need is, to correcte’ the text. Chaucer presents a model that, viewed through the perspective of today’s digital media approaches to crowd-sourced editing, is defined as closed-access, for he restricts permission to change a text only to a select few. Chaucer’s most prolific and ardent follower, John Lydgate, develops a dramatically different approach in his response to *Troilus and Criseyde*, the *Troy book*. There, Lydgate creates an open-access model of editing when he invites ‘alle þat schal it rede or se’ to correct his work. More than five hundred years ago, Lydgate recognizes the potential seen today in developing open-access relationships with readers through digital media, and turns to this potential to engage with his readers, shape his reputation, and contribute to the transmission of his text.

In effect, Chaucer articulates a closed-access mode of emendation, while Lydgate emphasizes an open-access model characterized by invited correction. Through their disparate attitudes towards error, Chaucer and Lydgate demonstrate their perceptions about the role of readers as participants in textual correction after the release and dissemination of their texts, and use corrective reading practice as a means by which to shape the responses of the readers that they anticipated would engage with their texts. In these ways, addressing corrective reading becomes a dominant method for guiding readers’ interaction with and contribution to English literary culture. The resistance to such participatory reading displayed by writers like Chaucer also points to the tension developing in response to the increasing ability of readers to exert their own authority over a text. Consequently, corrective reading becomes a practice inflected by contemporary concerns about readers’ authority, the gender of readers, censorship, and the developing technology of print in ways that reveal reading as a contested practice.

Chapter 2 attends to the practice of nonlinear reading, which has long been viewed as a defining feature of digital media. Through
the use of links and the juxtaposition of disparate forms of media on the same page, hypertext and hypermedia works have been celebrated for enabling and making widespread a reading practice defined as selective, discontinuous, nonlinear. Through this way of mediating text, readers choose where to begin and end their reading. This selective approach to reading is facilitated by links that enable readers to read non-linearly among other pages or nodes of text in whatever order they choose. They are not simply bound to read linearly from start to finish. Depicting a similar interest in nonlinear reading practice, Middle English devotional texts written in the fourteenth and fifteenth centuries often explicitly recommend this practice to their audiences. Yet, although most commonly articulated in devotional works, evidence for nonlinear reading and nonlinear narrative structures can be identified in secular works as well. Strikingly different, however, are the purposes critics treat as served by nonlinearity in digital media when compared to the purposes medieval writers viewed as facilitated by nonlinear reading: today’s nonlinearity is viewed as facilitating a speedy, ‘hyper’ practice of shallow engagement, while medieval nonlinear reading was recommended as a way to encourage deeper, more intense focus on a work or a passage. Contrasting these two perspectives on nonlinear reading points to the culturally determined consequences of reading.

To explore how writers engaged with or promoted nonlinear reading, Chapter 2 examines three texts that represent different modes of nonlinear reading: the Orchard of Syon invites female readers to determine their own nonlinear reading pathways that they might customize their devotional experience, introducing the issue of how reading can facilitate or control readers’ agency; in doing so, the translator of the Orchard draws on metaphors of mobility, the body, and time that become central to the subsequent participatory reading practices described in the following chapters. In contrast to the Orchard stand Titus and Vespasian and the Siege of Thebes. The former models nonlinear reading for its audience through the assemblage of a poetic text from diverse sources, demonstrating how a writer might seek to recreate the experience of nonlinear reading for an audience apprehending a linear text; and John Lydgate’s sequel to the Canterbury Tales, the Siege of Thebes, invites a hybridized approach to nonlinear reading, both guiding readers and eliciting readers’ own choices, much as does the Canterbury Tales. These texts reveal how medieval writers viewed nonlinear reading as a practice crucial to facilitating partici-
pation in literary culture across the divide of secular and devotional works. In addition, considering manuscripts of *Titus and Vespasian* and the *Siege of Thebes* reveals the complex material politics of nonlinearity, in which writers’ aims could be supported or undermined by scribal choices of layout beyond the writers’ control.

Even as increasing scholarly attention has been devoted to the significance of the material nature of medieval manuscripts, attention has only begun to focus on how the materiality of a text affects readers’ apprehension of it. John Lydgate’s ‘Soteltes for the coronation banquet of Henry VI’ represents one of these texts that gestures to one of the alternative material contexts favoured by late-medieval writers, for the ‘Soteltes’ text, extant in multiple surviving manuscript copies, offers a series of stanzas that accompanied, described, and spoke on behalf of figurative dishes presented at the 1429 coronation feast. Movement, initially discussed in Chapter 2 as a metaphor for nonlinear textual navigation, returns here in Chapter 3 with a difference: in the case of the ‘Soteltes’, it is the physical mobility of the text that contributes to one mode of its apprehension, alongside the visual, aural, textual, gestural, and performative. This chapter thus shows interaction among multiple participatory reading practices, a subject that returns again in subsequent chapters. Through their reliance upon movement and, in anticipation of Chapter 4, space, texts like the ‘Soteltes’ demonstrate how different aspects of materiality affect and give rise to distinct participatory reading practices. Furthermore, in the identity of the ‘Soteltes’ as banqueting texts, they can be situated along with texts represented on wall hangings, vases, plates, and decorative boxes. These represent a little-studied category of medieval textual media that I refer to as ‘extracodexical’. Extracodexical texts present a challenge to literary critics and manuscript scholars, for they gesture to the commingling of different modes of apprehension predicated upon the material conditions of a text. These materialities could incorporate elements of the visual, physical, aural, and gestural. Such multiple modes of apprehension point to the role of performative materiality, an approach that has been applied to how digital media manifest meaning through participation. In the case of the ‘Soteltes’, as the audience at the coronation banquet witnessed the performance of the ‘Soteltes’ from their seats, the figurative dishes themselves were ceremoniously ushered into the hall and moved into the sight of all. Space, place, movement, image, and text work with and through readers to shape recognition of the new king’s authority. In such cases,
then, reading can be understood as an act that requires not simply participation through the apprehension of a textual message either visually or aurally – the most basic understanding of medieval literacy – but as an act that requires familiarity with other, material modes of meaning-making, all deliberately selected, as well.

Reading was not only an experience that could occur as audiences sat reading a text, or metaphorically navigated a text described as a garden. Participatory reading could also be enacted through the efforts of a reader who negotiated architectural spaces. Exploration of the moving body in medieval textuality, then, invites consideration of what happens to that body as it negotiates architectural space to engage in specific reading experiences. In Chapter 4, I examine how texts painted onto walls in the Percy family’s principal estates of Leconfield and Wressle, preserved in the British Library manuscript Royal 18 D.ii, and in the mural of the *danse macabre* installed in a cloister at medieval St Paul’s Cathedral in London, invite consideration of the relationship between architecture, text, and image within and without the manuscript space. By turning to digital media theorists focusing on space, particularly those addressing architecture and embodied space, I argue in this chapter that the wall texts in their architectural frames elicit participation from readers whose bodies become the framers of knowledge as they move through and read the different estate spaces provided with wall texts. This chapter further argues that, by describing the original locations of the texts, the Percy family manuscript Royal 18 D.ii, and John Stow’s manuscript containing Lydgate’s text of the *daunce macabre*, Trinity College, Cambridge R.3.21, create opportunities for the virtual tourism of a fabricated space. In this way, Chapter 4 shows how the presentation of the wall texts evokes virtual space that the reader can then negotiate. In addition, the two wall texts in their manuscript and architectural contexts produce a tension between lived and virtual space that invites readers to engage in types of mental pilgrimage. Finally, forging a link between the manuscript as enabling virtual travel and the body of the reader who negotiates that space shows how mobility as part of reading experiences alters and extends the reach of the human body, a turn to the medieval posthuman.27

Given that the ‘best-seller of the Middle Ages’ was the book of hours, a devotional text whose reading was determined by calendars, clocks, and church hours, it is a striking oversight that little attention has been paid by medievalists to the relationship between time and reading, even as late antique and medieval thinkers like
Augustine have themselves considered the subject. Books of hours were not alone in situating reading within a temporal frame: medieval writers advocating nonlinear reading also refer to the relationship between time and reading. For these writers, temporal choices made by readers determined interpretation. Returning to digital media criticism about the relationship between time and agency in video games, and developing further the metaphorical relationship between reading and time first introduced in Chapter 2 as it becomes reading practice, Chapter 5 explores the significance of time to reading experiences. Time and temporal participation develop markedly in three fifteenth-century texts that encourage readers to make temporal choices as part of their reading experiences: *Thomas of Erceldoune’s prophecy*, a prophetic text focused on the relationship between Thomas Rhymer and the Queen of Faerie; Dame Eleanor Hull’s *Commentary on the penitential Psalms*; and Thomas Norton’s *Ordinal of alchemy*. In the way these writers and texts invite readers to make temporal choices and interpretations through the reading process, they encourage readers to perform reading shaped by temporality. Such temporal performativity includes inviting readers to rethink relationships created by the chronology of history by moving nonlinearly through time. Indeed, *Thomas of Erceldoune’s prophecy* provokes readers to reorganize chronologies, with the effect that readers craft individual narratives of past and future. Hull and Norton focus on modes of temporal manipulation, engaging readers in choices that affect their temporalized experiences of reading. These texts encourage readers to shape their understanding of personal history, political history, and the future of the political or spiritual self through temporally mediated reading. In this way, specific perceptual views of time emerge from individual acts of reading. Reading becomes an experience shaped by temporalities, and the mode in which one reads evokes a particular performative relationship to time.

The conclusion of *Participatory reading in late-medieval England* introduces the topic of resistance to reading and the relationship between the refusal to read and the participatory reading practices discussed in previous chapters. As writers struggled to both solicit and guide readers’ exercise of agency through reading practices, they also reflect ongoing concerns that what readers could do might easily escape the boundaries writers sought to establish. One practice that reflects how readers might act in ways that not only countered writers’ attempts to guide reception and interpretation of texts is through what Leah Price calls ‘nonreading’. When the
Wife of Bath in Chaucer’s *Canterbury Tales* takes up a book of wicked wives with which to beat her husband Jankyn over the head, her use of the manuscript illustrates a moment in which, instead of turning to the book for its designed role, the Wife repurposes it into a weapon. In the Wife’s moment of nonreading, the book has become ‘more valuable for some other purpose’, and that new value places it into a fresh network of social relations. Other examples of nonreading that attend to the material nature of texts include readers’ signatures and doodles, where the book becomes useful in ways that have little to do with their textual contents. Considering the role of nonreading through the lens of digitally inspired object-oriented theory that focuses on assemblages and relations within networks, this chapter argues that, when letters or books are more valuable for nonreading, their meanings, and the ways in which readers participate with them, change. This change affects books even in moments of reading, for it highlights their ever-present potential to act and be used in ways contrary to how writers might want them to work. Analysing the role of nonreading through its literary instantiations in scenes like that from the Wife of Bath’s Prologue, and in manuscripts where readers draw or inscribe their names, extends the argument of *Participatory reading in late-medieval England* to encompass acts of participation that resist and critique modes of participatory reading like those studied in previous chapters. In this way, I demonstrate how nonreading could shift books into alternative networks, and highlights how medieval readers could take charge and make books and reading work for themselves.

In arguing for recognition of the emergence and dissemination of a wide range of participatory, vernacular reading practices throughout *Participatory reading in late-medieval England*, I also show how these participatory reading practices enhanced tension between writers and readers. Such tension reveals an overlooked aspect to late-medieval literary culture of which I trace the importance: just as tensions surface in the developing notion of authorship, so too do they emerge around the practice of participatory reading. Reading involves culturally constructed practices; in a changing literary culture, what reading entails undergoes change and changed meaning. The growing tension between writers and readers thus requires revising accepted perceptions of the roles of the writer and reader, along with reading practices. I thus argue that the writer was not perceived as an unchallenged authority, nor were the readers’ contributions limited to marginal additions.
Instead, I show that the boundary between writing and reading is less stable, that writers explored what readers might be to them by anticipating readers’ enthusiasm for textual participation, and viewed readers as possessing a growing authority to contribute in sophisticated ways to late-medieval English literary culture. I thus cast new light on the literary practices of a period pre- and post-print to demonstrate how participatory reading vitally contributed to and shaped these negotiations of fragile authority. Finally, I end by revealing how readers resisted and critiqued participatory reading practices in ways that allowed readers, not writers, to set the agenda for their reading experiences.

Notes

2 Katherine Breen, Imagining an English reading public, 1150–1400 (Cambridge: Cambridge University Press, 2010).

5 In the seminal and still-influential discussion of agency offered in Hamlet on the holodeck: the future of narrative in cyberspace (New York: Free Press, 1997), Janet Murray defines agency through participation as ‘the satisfying power to take meaningful actions and see the results of our decisions and choices’ (126). This view of agency represents it partly as an aesthetic experience (it can be ‘satisfying’) and as linked to meaning, in which a person’s intentional decisions and choices determine their relationship to, and understanding of, a work.

7 Some scholars have even taken the increase in annotations appearing in early modern print books as encouraging passive readers, though William Sherman cautions against this view: *Used books: marking readers in renaissance England* (Philadelphia: University of Pennsylvania Press, 2007), xi, 5, 45.

Participatory reading in late-medieval England

24 The distinction between intensive and extensive reading, which is characterized by frequent and wide-ranging access to a great number of books, as opposed to focused concentration applied to a small number, was developed by a seminal historian of the book, Rolf Engelsing, and is best summarized in his influential article, ‘Die Perioden der Lesergeschicte in der Neuzeit’ (The phases of reading in the modern age), in Zur Sozialgeschicte deutscher Mittel-und Untersichten (Gottingen: Vandenhoeck und Ruprecht, 1973), 112–54. David Hall has shown a similar difference in kinds of reading at play in early modern New England; see ‘The uses of literacy in New England, 1600–1850’, in David Hall, Cultures of print: essays in the history of the book (Amherst: University of Massachusetts Press, 1996), 36–78. Scholars have critiqued Engelsing’s work, however, on several grounds.

Part I

Participatory discourse
This chapter focuses on a trope, one so common in medieval English literature that its critical work in the construction of late-medieval reading practices has gone unnoticed. This rhetorical device, often simply referred to as the humility topos, flourishes in Middle English during the fifteenth century, although it has its roots in fourteenth-century French of England and was common in Latin hagiographies before that.\footnote{1} In the humility topos, a writer draws attention to the spectre of his or his work’s flaws in order to elicit a kinder reception by readers.\footnote{2} It is a trope used by two of the three most influential poets of late-medieval England, Geoffrey Chaucer and his successor John Lydgate, and is turned to repeatedly by the merchant and translator who first introduced the printing press to England, William Caxton. In the hands of all three, and in its use by scores of other writers from the late fourteenth to the early sixteenth centuries, the topos accomplishes work that extends beyond the performance of humility and its consonant structuring of writerly authority. It does so through an additional feature in which writers anticipate readers’ responses to the flaws of a work and, most significantly, request that readers correct them. For example, as the fifteenth-century poet John Lydgate writes in *The Fall of princes*, he ‘requyr[es] of humbles / That all thoo which shal this makyng rede, / For to correcte wher-as they se nede’, that is, he humbly requires all those who read his poem to correct it wherever they see need.\footnote{3} I call this feature of the humility topos the ‘emendation invitation’, and it serves to promote – or discourage, in the variations of the discourse it establishes – ‘corrective reading’. For its expansive late-medieval deployment by writers, corrective reading elicited through emendation invitations deserves closer scrutiny. In particular, its reliance on participation positions emendation as crucial to understanding how late-medieval writers explored what the growing audience of vernacular readers might
be capable of achieving, for good or ill. In other words, through the vehicle of the humility topos, emendation occupies a central position contributing to a discourse of participatory reading that exemplifies how late-medieval writers articulated, anticipated, and responded to the participatory work of readers.

An early emendation invitation can be found in the Anglo-Norman *Roman de toute chevalrie*, a version of the Alexander legend composed by Thomas of Kent around 1175. This and other texts that followed attest to use of the invitation written in the French of England and the Continent. The emendation invitation thus possess long-standing status among the vernaculars of medieval Europe. It is not until the late fourteenth and fifteenth centuries, however, and in Middle English, that the emendation invitation reaches the pinnacle of its utility, versatility, and popularity. Over the course of the century, variations emerge in its use. These variations demonstrate a systemic reliance upon the emendation invitation that reveals it as foundational to a discourse of participatory reading, one well established enough that variant expressions and uses of it become possible. Such variations also proliferate widely in late-medieval English literature, to the extent that patterns can be identified in the deployment of variations on the emendation invitation, and these variations distinguish among groups of readers to encourage some and discourage others, and similarly encourage or discourage types of corrections.

The emendation invitation thus depicts participatory reading expressed through correction, and it emerges in numerous contexts that touch upon defining features of England’s late-medieval literary scene, such as writerly authority, censorship, gendered audiences, vernacular reading practices, and the technological shift from manuscript to print. In its emergence, it most commonly demonstrates varying attitudes towards readers’ corrective reading that seek either to encourage or restrict its practice. These attitudes strongly resemble those adopted towards open- and closed-access participation possible today in digital media, suggesting a longer, premodern history of practices today considered characteristic of digital media, such as crowd-sourced editing.

**Open and closed-access invitations**

What follows will delve more deeply into an example of each of these variations on the emendation invitation, selected from among the many writers who use the invitation partly for clarity of expres-
sion and partly because all three examples come from writers associated with Chaucer: Chaucer himself, Lydgate, Chaucer’s most influential follower, and Thomas Norton, a late fifteenth-century Chaucerian. Chaucer’s contributions to the development of a modern understanding of the writer as author, possessing authority and creative originality, has long been explored by critics. Yet constructing authorship also implicitly constructs readership as well. Thus, even though emendation invitations predate Chaucer, his adoption of the emendation invitation signals both recognition of its influential work in constructing readership through a participatory reading practice, and promotes to other writers its utility in constructing relations among writers, texts, and readers—a promotion traceable through how Lydgate and Norton, and many other authors influenced by Chaucer, adopt the emendation invitation even as they use variations of it. That these examples, and many others, emerge across a variety of genres from courtly romance to history to alchemical treatises testify as well to its systematic use in late-medieval literary culture.

As Lydgate, referenced above, depicts an open example of the emendation invitation through inviting all readers to correct the text, Chaucer occupies a middle ground in his offer of an early example of the emendation invitation in Middle English at the end of *Troilus and Criseyde* following the ‘Go, little book’ address of the Envoy. There, Chaucer famously expresses concern about the stability involved in the transmission of his text, and envisions a compensation for this instability. In doing so, he relies on the discourse of participation exemplified through the emendation invitation. Yet, rather than inviting any readers to contribute, Chaucer restricts participation only to a named few:

```
And for ther is so gret diversite
In Englissh and in writing of oure tonge,
So prey I God that non miswrite the,
Ne the mysmetre for defaute of tonge;
And red wherso thow be, or elles songe,
That thow be understonde, God I biseche!
```

```
... O moral Gower, this book I directe
To the and to the, philosophical Strode,
To vouchen sauf, ther need is, to correcte,
Of youre benignites and zeles goode.6
```

Commonly assessed for what it might indicate about Chaucer’s literary circle, critics most often refer to this passage as a dedication.
and commentary on the capabilities of English as a literary lan-
guage, expressed through the focus on the writer’s incapability, so
familiar in humility topoi. However, Chaucer moves beyond the
expression of authorial humility through his evocation of emenda-
tion. Chaucer charges two specific people, Strode and Gower,
to intervene in the work of manuscript transmission by acting as
editors and preservers of Chaucer’s text.

Chaucer’s use of the emendation invitation demonstrates an
emendation invitation restricted to only two people, specified by
name; it is neither fully open, nor is it entirely closed, forbidding
correction by any and all readers. In representing himself as pos-
sessing both the authority to secure the future of his work and its
treatment at the hands of readers, Chaucer employs the emenda-
tion invitation to contribute to his writerly authority, interest
in and control over textual transmission, and his interest in and
limitation of readers’ participation. Considering how writers use
the emendation invitation to shape relations with readers and the
text provides opportunity to resist (in the words of Gilles Deleuze
and Felix Guattari) ‘cut[ting] the book off from its relations with
the outside’. In other words, viewing Chaucer’s dedication of the
book as merely an example of the humility topos overlooks how
writers sought to use the trope to imagine and guide relations with
readers. Instead, in its use by Chaucer, the passage depicts how
Chaucer both assessed the roles of his readers and envisioned his
relationship to his audience. He deploys his authority as creator of
the text in order to influence who should care for the work after
it leaves his hands and control, even as he anticipates who will
not care – like the scribes who would copy his text. Accordingly,
Chaucer’s emendation invitation can be situated in conversation
with his later short lyric, ‘Chaucer’s Wordes unto Adam, His
Owne Scriveyn’, in which Chaucer chides – perhaps playfully,
perhaps seriously – his scribe for the many infelicities that Adam
has introduced into Chaucer’s works, which Chaucer must then
correct. Intimately familiar with the problems a scribe can create
for his texts, Chaucer seeks to forestall those problems by placing
Gower and Strode in charge of overseeing the correction of Troilus
and Criseyde. That ‘Adam Scriveyn’ was composed after Troilus
and Criseyde indicates that Chaucer was, perhaps, aware that
seeking to encourage a restricted audience of correctors to oversee
and emend his text had little impact.

In crafting his authority to limit emendation to specific readers,
Chaucer draws on terms commonly found in humility topoi:
the terms of correction and emendation. Gower and Strode are ‘to correcte’ the text where they determine that need exists. In asking them to ‘vouchen sauf’, Chaucer requests that they guide and also that they permit such correction, consequently placing Gower and Strode in charge of determining the emendation the text undergoes. Furthermore, in doing so, he suggests that they form a particular class of reader, that of the professional reader whose experience and education situate them as learned and familiar with sophisticated literature and its transmission. Chaucer thus turns to the emendation invitation to provide language and practice through which to guide engagement with the text. Such examples of the emendation invitation as Chaucer’s perform key work in establishing a discourse of participation focused on soliciting specific readers’ contributions to the text’s correction and transmission.

The emendation invitation both informs us about writers’ expectations regarding what work readers should or should not perform, and it highlights the diverse strategies writers employed in anticipating and shaping participation with their audiences. It also, and quite explicitly, provides instructions for readers regarding how they should participate with and respond to the text or author. Recognizing this also highlights how the emendation invitation makes reading a visible activity, and articulates sophisticated subject positions for readers, whom the topoi represents in the role of overseeing the text after its copying and dissemination.

These instructions consequently act as guidance that attempts to shape a subsequent reading experience. One of the challenges of studying medieval reading is that its performance, at the cognitive level, leaves no material traces, and what usually offers itself for study is the retrospective evidence of reading, such as that presented by manuscript marginalia. Examining the variety of means by which writers chose to phrase their invitations to emend, or discouraged readers from doing so, provides access to a critical backdrop against which to situate specific medieval readers’ manuscript marginalia. In this context, the invitation to emend crafts expectations regarding readers’ participation in manuscript transmission and treatment: it maps out the details of reading in advance – proleptically, rather than retrospectively. Considering the invitation emendation in this way thus invites us to situate studies of individual manuscripts’ marginalia against this context, when evaluating what manuscript marginalia contribute to the picture of late-medieval English readers and reading practices.
The discourse of participation figured through emendation invitations also invites researchers to consider how specific texts and their readers participate in that discourse. In its simplest form, this assessment might begin by considering whether the text in a specific manuscript includes an emendation invitation. Such assessment would refine understanding of the marginalia of that manuscript by further characterizing its readers as responding to, resisting, or ignoring such invitations.

An example of an emendation invitation that strikingly contrasts with and almost certainly responds to Chaucer’s invitation to Gower and Strode at the end of *Troilus and Criseyde* is that provided by John Lydgate in his response to *Troilus and Criseyde*, the *Troy book*, in which Lydgate extends and refines his invitation to emend the text no fewer than six times. Rather than strictly modelling his use of the invitation after that of Chaucer, which might be expected given how strongly and frequently Lydgate affiliates his work as a writer with Chaucer’s, Lydgate employs an alternative approach. Whereas Chaucer envisions restricted, limited participation in the work of emendation guided by Gower and Strode, Lydgate, at the end of the *Troy book* prologue, invites correction of his work in expansive terms:

```
Preynge to alle þat schal it rede or se,
Wher as I erre for to amenden me,
Of humble herte and lowe entencioun
Commyttyng al to her correccioun,
And ther-of thanke; my wille is þat þei wynne,
For thoruȝ her support þus I wil begynne.10
```

Lydgate invites all readers – not simply a learned subset of the author’s contacts, or the audience of scribes as professional readers – to participate in the work of textual correction. In his expansive conception of a broad audience eligible, fit, and likely to correct the text, Lydgate’s use of the emendation invitation exemplifies the open type of emendation invitation, one that sees value in encouraging corrective reading. For Lydgate, adopting a model of openness facilitates the kinds of participation with readers that leads to the improvement of his text in the face of the inevitable vagaries of manuscript transmission. Lydgate’s open-access model of emendation relies on the technological qualities of a manuscript as a writing surface accessible to modification by readers. Corrective reading is thus a process both interactive and participatory; the interactive participation possible through
Corrective reading encourages the development of a collaborative relationship between writer, text, and readers. For Lydgate, corrective reading is a form of social reading with benefits accruing to writer, text, and readers alike.

As with Chaucer, Lydgate relies on his role as writer to provide the grounds for instructing readers and constructing the basis of their work as such. Reading should be an act embarked upon not simply to benefit the reader by gaining an understanding of the matters a text expresses, but also performed with a critical eye for where the text might need correction, benefitting the reputation of the writer and the reliability of the text. To facilitate this corrective reading, Lydgate also specifies the types of emendations he desires when he restates his emendation invitation at the end of book five. Expecting similar types of scribal alterations as Chaucer seems to have unhappily anticipated at the end of *Troilus and Criseyde*, Lydgate beseeches ‘al þat shal þis noble story rede’ to correct ‘falsely metrid’ lines and emend lines where they observe that ‘any word [is] myssit’.11 (‘Myssit’ here describes words that can be absent, unbecoming, or unsuitable.) He then links this collaborative work of review and editorial correction to moral and intellectual improvement – his own and his readers’; not to emend a passage in need of correction ‘is no worshippe to hym þat is wys’, as Lydgate explains.12 This form of participatory reading thus, as Lydgate sees it, conveys benefits to the reader, the writer’s reputation, and the stability and truth of the text.

Lydgate’s encouragement of reader emendation also speaks to one of his poem’s central projects, the provision and preservation of truth. His use of the emendation invitation promotes corrective reading, which he views as conveying moral benefits to his readers. In correcting the text as Lydgate invites, participatory audiences would put the moral instruction the text offers to practical use by assisting in correcting it and Lydgate. The work of such readers would thus contribute to the preservation of textual and personal truth, preventing Lydgate’s translations and elaborations from ‘hyd[ing] trouthe falsely under cloude’ (265) as had been done in other literary retellings of the Trojan War. Readers protect the truth of *Troy book* by correcting its errors and winnowing false from true as they read. Furthermore, the connotations of ‘amenden’ and ‘correccioun’ that evoke practices of textual emendation enhance the moral valence of readers’ corrective work, for ‘amenden’ and ‘correccioun’ are also common terms in the discourse of moral improvement.13 In effect, Lydgate positions
corrective reading as enabling readers to participate in the work both materially and morally. How readers participate, what they change, why they change it, and what the results are – all is initially left to their discretion. Yet, by yoking reader participation to moral correction, *Troy book* does not simply instruct its readers in virtues; instead, *Troy book* directs readers to a practice that enables them to perform virtue through emendation. Corrective reading transforms *Troy book* into a dynamic, moral learning space for its readers.

One of the fundamental effects of emendation invitations is their emphasis on the development of readerly agency, for the invitations suggest that readers can and should make choices about how they participate in response to a text. In addition, the invitations suggest that the decisions readers make carry significance for themselves, the writer, and the text. In the way that they emphasize agency, the emendation invitations both create a discourse of reader participation, and further normalize an identity of readers as participants whose work matters. This carries significance because, in the inclusivity of invitations addressed to ‘alle’ of the readers of a work, these emendation invitations speak not to the audience of professional readers alone, but to the audience of amateur readers as well. Such treatment conveys legitimacy upon their efforts, encouraging them. It also distils from the sophisticated interpretive and textual practices of professional readers basic building blocks – paying attention to the metre, to word choice, or other errors – that provide guidance to amateur readers desirous of education in more formal modes of reading. Finally, it facilitates and directs their investment in literary culture, much as open-access editing today does, by encouraging audiences to read a text seriously.\(^\text{14}\) Given that some of the invitations occur at the end of the text,\(^\text{15}\) rather than the start, they could also have been a spur to reread with another focus in mind than readers might have had in their initial engagement with the work.

While Lydgate’s attempts to encourage amateur readers to participate in emendation express optimism that their contributions can be useful for a text, and value the prospect of reader participation, other writers explicitly and comprehensively condemn reader participation in the creation of a text’s meaning, or limit participation to specific people, as Chaucer does in *Troilus and Criseyde*, and as other writers do in suggesting that corrections be managed by the patron who commissioned their texts. Such attempts to close access to emendation indicate concern regarding
the negative repercussions of reader participation, and lead to attempts to control the participation of readers by encouraging readers to receive passively the text as transmitted by its author. One writer interested in maintaining authorial control over the text was Thomas Norton. The *Ordinal of alchemy*, a text the author began composing in 1477 to introduce the science of alchemy to a lay vernacular audience, offers a dissenting view on the work of readers that sharply contrasts with the more inclusive invitations of Lydgate and other writers who openly invite reader emendation. It is a contrast that emphasizes anxieties about readers’ abilities and enables the assemblage of a more detailed picture of expectations for, and about, readers. These anxieties seem to cluster around texts whose topics or genres were viewed as weighty or dangerous: alchemy, and also religious writing.

Norton cites Chaucer’s ‘Canon’s Yeoman’s Tale’ when discussing the Philosopher’s Stone and thus situates himself within a tradition of English poetic works on alchemy, even as he also situates himself within the Chaucerian tradition, thus making his work a particularly fitting example of an approach that contrasts with the Chaucerian Lydgate and Chaucer himself. The diversity of responses among these three writers indicates that, while attentiveness to readers and their relations to a text is certainly an aspect Chaucer draws attention to, his example does not become a template adopted by his followers. In contrast to Lydgate’s open invitation to all readers, Norton does align himself more closely to Chaucer’s model of restricted access to corrective reading – but does so to an extreme, by forbidding emendation altogether. Accordingly, Norton’s approach exemplifies a highly restrictive model that also allows Chaucer’s version to be identified as a hybrid example of the emendation invitation, partly open (to Gower and Strode), and also closed (to all others). Norton, in contrast, closes access to all readers: the only person eligible to change the text is the author himself. Yet Norton also demonstrates awareness of the work of readers and presumes them inclined towards corrective reading, even if he does not view the consequences of this reading practice in a positive light. Indeed, unlike Lydgate and other authors interested in open-access emendation, Norton views readers’ emendations as an especially undesirable outcome, potentially dangerous in the hands of the ‘rude peple’ he aims to educate. In the *Ordinal of alchemy*’s prologue, he explicitly and bluntly seeks to dissuade readers from participating materially with his text:
And that no man for better ne for wors
Change my writing, for drede of Goddis curs;
For where quyck sentence shal seme not to be,
There may wise men fynd selcouth privyte;
And changing of som oone sillable
May make this boke unprofitable. (170–5)

Fear, first of the curse of God – a rote phrase describing excommunication – and then for the integrity of author-developed meaning, becomes the tool Norton initially uses to forestall reader engagement with textual emendation and transmission. Norton seeks to evoke doubt in his readers regarding their fitness to engage with the text, however insignificant they perceive their emendations to be. Even changing ‘oone sillable’ may obscure meaning and render the book of little use. Perhaps motivated by the genre of his work as a treatise in the scientific mode, Norton views readers’ attempts to correct seemingly obvious errors as opening the floodgates to textual corruption. He, as does Chaucer in ‘Adam Scriveyn’, views readers’ and scribal modifications as corruptive, a view shared by modern editors for much of the nineteenth and twentieth centuries.

Not only does Norton engage to forestall readers’ drive to correct what might be perceived as minor orthographical errors, however, he also attempts to circumvent reader contributions based on what he anticipates will be mistaken acts of interpretation. Even when an initial reading leaves a reader struggling to identify the ‘quyck sentence’, Norton asserts that meaning exists, available to closer rereadings. ‘Trust not to oon reading or twine’, he further declares, ‘But xx. tymes’ (176–7). Neither one nor two readings will suffice; only rereading twenty times will do. This advice responds to his concern that readers will alter his work to draw out or correct places where the meaning seems obscure, a practice he emphatically condemns. He views readers who are interested in participating through corrective reading as engaged in a shallow mode of apprehension. In this way, Norton finds emendation lacking in substance and benefit. He turns away from corrective reading to promote another reading practice instead, one defined by disciplined rereading.

Norton’s efforts to control reader participation reflect his desire to preserve his treatise as a fixed work, and he expresses concern about the ease with which an emendation made in ignorance by a reader could disturb his system of concealed messages, such as his use of acrostics to identify himself as the author of the text.
Consequently, Norton advocates textual stability as authorially determined. He ends at the last by developing another form of control: intellectual. In order to maintain textual stability and the primacy of authorial meaning, Norton encourages the development of the omnivorous reader, who will ‘rede many bokis’ but not emend them. Accordingly, Norton adopts a stance that favours readers whose consumption of the text focuses exclusively on interpretive reception, and further promotes recognition of authorial autonomy. His adoption of this stance further indicates that ‘intensive’ reading viewed as characteristic of pre-eighteenth century reading practices, which focuses on the close study of a small number of books, is countered here by Norton’s advice to read not intensively alone, but also ‘extensively’, consulting and consuming a high number of books.21

Like all the Middle English writers who articulate a policy of closed or open access, Norton conveys his concern for the afterlives of his work, and envisions readers’ immediate response to a text as likely to pursue corrective reading. Whereas Lydgate and Chaucer, to varying degrees, promote the participation of corrective reading and imply it as unlikely to occur without prompting, Norton tries to forbid participation altogether. They may also be responding in different ways to practices they already perceived as common and likely to be undertaken by their readers, and thus seek to shape particular effects of such anticipated engagement. Their differing stances, articulated over the course of nearly a hundred years, reveal the degree to which participatory reading through emendation had pervaded fifteenth-century vernacular literary discourse. Emendation invitations, and the corrective reading strategy they shape, not only intersect with expectations about readers’ capabilities, but also demonstrate how corrective reading might be perceived as harmful, and therefore in need of efforts to control or even prohibit. In response to these concerns, Norton encourages a mode of reading that produces immaterial work from his audience: he focuses on the interpretive work of reading, rather than the kind of close reading encouraged by Lydgate’s recommendation that his participatory readers pay attention to matters of syntax, spelling, and metre. Norton’s choice may have reflected the higher stakes for him as a writer producing an alchemical poem that also critiqued the king; in such a context, he may have felt more cautious regarding what his readers might do with his work than Lydgate, who in focusing on history pursued a less fraught path.
Medieval emendation, modern crowd-sourcing, and collaboration

The treatment of the emendation invitation in these examples by Chaucer, Lydgate, and Norton exemplifies the three major types of emendation invitations: the open invitation, the closed invitation, and the hybrid invitation. The language used to describe these three types of the emendation—open and closed—highlights a parallel between medieval and contemporary media practices. In particular, it draws on the discourse of open access that has developed in response to the technological, economical, and social conditions that shape and are shaped by the internet and digital media. That is, the shift from analogue and print to digital media, and the subsequent development of digital media, emphasized interaction—interaction not simply in accessing or sharing media, but in contributing to it. This interest in enhancing participation, insofar as it connects with emendation and participatory reading, can be best exemplified by three developments that linked a media platform to reader participation. The first of these is Wikipedia, whose culture of open-access, crowd-sourced editing is fuelled by readers who become contributors to the site; by blogging software that facilitated the development of communities of commentators that writers could encourage to participate in specific ways, as did Noah Wardrip-Fruin when he invited readers of his blog Grand text auto to submit questions, suggestions, and corrections to drafts of his then in-progress book; and the adoption of crowd-sourced editing applied to open peer review within academic journal publishing, initially explored by Shakespeare quarterly in their special issue on ‘Shakespeare and New Media’. That these developments became possible can be attributed partly to the emphasis on participation that emerged as a hallmark of what is referred to as ‘Web 2.0’, that is, second-generation internet culture, but also because this nascent culture emphasized an approach to digital media defined not by the mainstream capitalism-driven consumer economy, but by sharing and open access.

The sharing economy of second-gen digital media development countered traditional hierarchies that limited interaction between creators and consumers by enabling consumers to participate in media creation and development. The digital sharing economy also challenged the long-standing capitalism-driven framework that has developed around authorship, which constructs writing and editing as forms of labour recognized through copyright and consonant
Corrective reading

financial remuneration, and reading as a form of entertainment with no labour value, and therefore no financial value. Through digital sharing economies, writers, texts, and readers can interact freely. This sense of ‘free’ connotes both freedom of access and freedom from the constraints of institutionalized financial valuation of writing and the lack thereof for reading. That these qualities can also apply to descriptions of late-medieval literary culture is neither coincidental nor irrelevant to how, in both cultures pre- and post-print, an interest in reader participation flourishes. In these literary cultures, value is expressed socially through reputation and influence, which readers can contribute to or hinder through their own efforts. In this context, the late-medieval emendation invitation, which identifies audiences of readers who are guided in accessing and contributing to a work, can be firmly situated within this long history of media access discourse.

The strikingly different approaches toward corrective reading that Chaucer, Lydgate, and Norton demonstrate also represent how late-medieval English authors grappled with models of review, correction, and reception. Their uses of corrective reading – whether encouraging or discouraging it – highlight issues including the authority of writers and readers, writer participation with audiences, and preservation the integrity of works whose every manuscript transmission invited fresh changes. Many of these are issues that have also emerged in contemporary debates about the state of academic publishing in the context of new approaches made possible by social media platforms, and have invited evaluation of the challenging economies of publishing, perceptions of collaboration, and opportunities to alter writer–reader participation. In this context, Chaucer’s act of committing the text to the attentions of Gower and Strode, for example, evokes the academic peer-review process, for Chaucer authorizes the review of his work by an educated audience of his peers. Their learned review and emendation will help ensure the integrity of the text and, thereby, the writer’s and text’s reputation. Similarly, Lydgate also seeks to ensure the integrity of his text and its reputation along with his own, but he instead turns to his broad community of non-professional readers. Situating Chaucer, Lydgate, and Norton within the discourse of open and closed access asserts connection between the pre- and post-print media cultures. The analogues between medieval emendation invitations and modern editorial practices provide an alternative way to consider associational, rather than chronological, narratives of book history.
Participatory reading in late-medieval England

Considering Chaucer’s, Lydgate’s, and Norton’s emendation invitations through the lens of closed/open access and crowd-sourcing also sheds more insight on the role of corrective reading as a practice advocated by Lydgate and other fifteenth-century writers. As noted by Kathleen Fitzpatrick, open-access practices, in particular, represent a form of interaction. Fitzpatrick uses the term, as do many, as a synonym for participation. In this light, she observes that ‘[T]he key issue is interaction. The author is not operating – and has never operated – in a vacuum, but has always been a participant’.25 When the author participates or envisions participation through the invitation to emend the text, engagement with a reader becomes the focus. Furthermore, this participation depicts a collaborative relationship – or, in a closed-access invitation, resists collaboration – among writer, text, and reader. Corrective reading, articulated through the emendation invitation, can consequently be positioned as a nexus of social reading practices. Although the dominant narrative of reading in the later Middle Ages explores the rise of silent reading that made solitary reading a possibility, and a contrast with public reading practices, the emendation invitation points to a narrative of reading as a social act. Even if performed silently, emendation invitations structure social relations between writers and readers through promoting a model of readership that figures textual correction as a participatory activity furthering writer–reader relationships.

This focus on the social aspects of reading were furthered through the way some writers, in their emendation invitations, addressed their audience. Lydgate and most other writers address invitations to those who ‘rede or se’ the text, with William Caxton preferring to address those who ‘see or here’ the text.26 Together, the ‘see and here’ and the ‘rede and se’ constructions gesture to the encompassing nature of medieval literacy and reading practices, where both those who see or hear the text engage in the work of reading.27 Even the person who reads the text through aural apprehension can identify where the metre of a line has gone astray, and see to its correction. This construction first points toward the multivalent understanding of medieval literacy practices: hearing the text, as well as apprehending it with the eye, are both modes of reading. It does mean, however, that members of Lydgate’s anticipated audience may not have possessed the writing skills that enabled them to follow through with the provision of corrections. Corrections may then have been enacted more by the most
sophisticated and learned of readers, such as scribes, instead. Yet the ‘see or here’ construction, in particular, emphasizes corrective reading as a social practice, in which participation furthers relations among readers in dialogue with each other as they speak of needed emendations to a text. Although readers invited to participate in corrective reading may only effect changes to a single manuscript (although corrections could proliferate through its descendant copies), Lydgate, Caxton, and other writers figured corrective reading as a social activity that provides immediate benefit to its participating practitioners.

In the assumption that readers can correct texts, writers employing the emendation invitation recognize a hallmark of crowdsourced editing today that makes such contributions possible: that is, the accessibility of the medium to non-professional, amateur contributions. The reader who makes corrections to Wikipedia can do so because of its accessible design; in the fluidity and accessibility of manuscript culture, corrective readers simply needed access to a pen and ink in order to register their changes – and only to a knife to scrape away ink in order to rewrite a passage altogether. Fluidity, participation, and interaction mark the convergence among the technologies, practice, and study of open-access editing today and the materials, reading practices, and textual culture of late-medieval England. Both point to how late-medieval English writers, through the invitation to emend their texts, situate readers as participants in the creation of meaning through not reception alone, but also through production. Reading is thus represented as an activity that can include writing; readers and writers exist in a collaborative partnership of mutual benefit.

Lydgate clearly recognizes the possibilities of reader collaboration through emendation, and the value of including readers in the literate community presupposed by his texts. In *Troy book*, for example, Lydgate employs the humility aspect of the invitation to emend the text in order to engage more directly and equally with his readers: he refers in the prologue not to the text alone, but also to himself as the recipient of his readers’ corrective work. At one point, he also enhances this sense of community participation between himself and his readers by addressing them as ‘ȝe’: ‘ȝet in þe story ȝe may fynde plesaunce / Touching substaunce of þat myn auctour wryt. / And þou ȝe so be þat any word myssit, / Amendith it, with chere debonaire’ (V.3492–5). The plurality of this pronoun figures readers as participants both in a relationship with Lydgate and as participants in a literary community of all those who ‘rede
or se’ the text, where membership is gained through the work of participatory reading.

Even for those readers approaching the text alone or in isolation, emendation invitations remind them that others also participate in similar ways, and each reader contributes to the continuing circulation of copies of the work that are ever improved. In this way, Lydgate envisions how reading with an eye turned to emendation becomes a means for participating in a shared literary endeavour. Furthermore, participation carries personal consequences for both text and writer, in addition to the gateway it provides for participation in literary culture of fifteenth-century England. Through his open invitation to emend the text of *Troy book*, Lydgate presents participation in literary culture as an attainment accessible to all possessing a basic degree of literacy. He does not require the ability to visually apprehend a text, but enough ability to understand metre and sense, so as to identify when a word has been left out or written in such a way that the formal qualities of the verse have been affected. For Lydgate, basic literacy involves familiarity with literary and artistic modes of expression. As participatory reading establishes a sense of community figured around beneficial contributions to a text, *Troy book* and texts that similarly invite open access to emendation offer a counter to the ‘hostility to writing’ that had erupted in the late fourteenth century, particularly during the Uprising of 1381.28 Rather than figuring texts as a locus of divisiveness between the literate and illiterate, emendation invitations frequently gesture to the inclusivity and accessibility of reading and writing to the author’s primary audiences, and to the possibility of furthering relations between writers and their readers.

How emendation invitations charge participatory reading with a sense of community participation invites another association to today’s media culture, in the latter’s emphasis on the relationship between participation and community. Indeed, scholars of digital media often credit participation with enhancing the social relationship of writers and readers by simulating presence and the give-and-take of conversation, thus providing the grounds for development of trust and familiarity.29 In digital media open-access editing projects, with their feedback loops that facilitate interaction, a sense of community among author, text, and user can be sustained and developed.30 In this way, when Noah Wardrip-Fruin asked for readers of his blog to offer corrections to his then-forthcoming monograph *Grand text auto*, he anticipated being
able to discuss suggestions with his readers through the comment features on his blog interface. The situation clearly differs in manuscript and print cultures, where exchange is limited to the physical text and its reader, with the writer’s presence simulated but not actualized. A change to a reader’s copy of a manuscript or print edition does not automatically update a copy to which the writer has access. Yet, by relying on the use of first- and second-person forms of address as exemplified in Lydgate’s emendation invitations, writers in medieval manuscript culture relied on participation through emendation ‘to facilitate interactions similar to interpersonal communication’. In other words, corrective reading offered medieval writers and readers a simulation of interpersonal interaction and education, an evocation of community participation in literary culture that views readers’ textual participation as enabling desirable, essential, and beneficial contributions on behalf of a writer, not a text alone. Furthermore, the reliance by Lydgate and other writers on corrective reading, predicated as it is on accepting and developing the accessibility of the manuscript text to readers’ contributions, emphasizes how medieval notions of literary community contrast with the idea of the solitary writer that developed over the course of the print era. Corrective readers, today and in the fifteenth century, are social readers. As social readers, they participate in relationships both with the text and the writer as the objects of their correction.

Changing attitudes towards emendation

One of the fascinating developments in the use of emendation invitations that emerges over the course of the fifteenth century occurs through the wide range of variance in attitudes towards open- or closed-access emendation by readers. These attitudes are not static, but change over time. Although many readers today might expect attitudes towards emendation to change in the wake of the advent of the printing press, seeing it as stabilizing and fixing the form of the text, neither Caxton nor his immediate successors treat print as fixed in ways that prevent the transmission of reader emendations. This expectation regarding the transformative nature of print owes much to the work of Elizabeth Eisenstein’s influential work on the introduction of the printing press. More recent studies, however, attest to how printers and readers, even two centuries after the advent of the printing press in Europe, viewed it as adding little to textual stability, and, in some cases, worsening the reliability
Participatory reading in late-medieval England

of the text.\textsuperscript{34} This recognition of the fallibility, malleability, and motility of the printed work may explain much about Caxton’s continued reliance on the emendation invitation. Developments in the treatment of emendation invitations appear, instead, to correspond to the genre of the texts offering invitations to emend, the gender of the texts’ intended audience, and the professional affiliations of a text’s audiences. Surveying emendation invitations written between 1385 and 1499, during which more than thirty authors deploy emendation invitations, reveals trends that can better situate emendation invitations within the literary discourse of late-medieval England.

In general, the ratios of open to closed to hybrid change in significant ways over the course of the fifteenth century. Between 1380 and 1399, the ratio of open to closed to hybrid is 1:1:2, representing parity between open to closed and a preference for hybrid invitations.\textsuperscript{35} By the end the fifteenth century, that ratio has flipped in dramatic favour of open invitations. Between 1480 and 1499, the ratio is 5.5:1:2.\textsuperscript{36} There are more than five times the number of open invitations for every closed invitation extended to readers.\textsuperscript{37} The general trends suggested by changing ratios of types of emendation invitations reveals, from 1380 to 1430, a preference for hybrid review that closes participation except to specific groups of participants, particularly among writers of devotional works. The situation then changes markedly. From 1431 to 1495, the preference is for open invitations. This increase in the solicitation of open-access emendation by readers is facilitated by Caxton, who contributes a significant portion of them, but the rise in numbers predates Caxton and his press largely due to Lydgate’s preference for open-access emendation, particularly in poems written in the latter years of his career.

In other words, the technology of the printing press facilitated the change in the ratios towards open-access invitations to emend texts, but did not create that change. Nevertheless, print contributed significantly. Contrasting the ratios of emendation invitation types found in print with those in manuscript from 1475 to 1499 indicates that texts in print trend in favour of open emendation and, with it, corrective reading, 14:1:4. Texts that circulate in manuscript, in contrast, prefer closed invitations, 0:2:1. These ratios reflect changing behaviours and attitudes towards emendation and readers’ access across genres and technologies of text. While Lotte Hellinga said of Caxton that his early choice to print short books that might be collected into a volume, followed
by his publication of Chaucer’s *Canterbury tales*, reflected a way that he had ‘made readers’, the use and treatment of emendation invitations additionally reflect how writers from the late fourteenth to the early sixteenth centuries represent their investment in the project of making readers. Making readers, and making them work, involves considering how to encourage, direct, or limit corrective reading practices. These considerations were further emphasized by Caxton and his own followers in the early years of the printing press’ contributions to English book culture, suggesting that early printers saw the press as providing an opportunity to enhance and further build upon the changing attitude toward readers displayed by other late-medieval writers. Furthermore, in focusing on participation expressed through the practice of corrective reading, writers locate readers within a constructive, participatory, frequently collaborative understanding of England’s literary culture.

These changing attitudes toward emendation and access suggest further developments in behaviour towards and understanding of non-professional readers. Whereas Chaucer emphasizes his authority over that of his readers, and restricts participation to a select few, writers over the course of the fifteenth century appear vigorous in seeking ways to engage readers’ direct participation in literary culture. Readers become viewed as capable of contributing to a text in sophisticated ways. The emendation invitations in Lydgate’s *Troy book* to all his readers depict them as capable of doing for his text what only Gower and Strode were represented as capable of doing for Chaucer’s. Accordingly, the discourse differentiating the ‘learned’ from the ‘lewid’ diminishes and readers gain prominence as collaborative communities whose assistance and participation writers increasingly chose to value and solicit. In this way, Chaucer, Lydgate, and their fellows are evaluating not only their goals for the dissemination, reception, and futures of their works, but they are also considering how engaging the interest and participation of readers in different ways can contribute to the outcomes they seek.

Tracking reader responses to these invitations suggests that they worked with mixed success, either in encouraging or discouraging participation. The majority of changes to Chaucer’s *Troilus and Criseyde*, for example, come from the hands of professional readers, the scribes who recopied Chaucer’s work. Analysing scribal variants in *Troilus and Criseyde*, Barry Windeatt describes how scribes regularly altered Chaucer’s more obscure or non-standard diction as they attempted to simplify or literalize the figurative complexity
of his verse, and demonstrates that these alterations frequently changed the syllabic content of Chaucer’s lines.  

His analysis has been extended by Daniel Wakelin’s broad assessment of scribal correction in late-medieval England, which reveals scribes to have pursued the alterations they made with thoughtful deliberation.  

In this light, Chaucer’s commendation of his text to Gower and Strode seems as prescient as it was futile: professional readers did as they wished regardless of Chaucer’s discouragement. As the majority of marginal comments and glosses appear to be scribal in origin, this suggests that Chaucer’s discouragement of generalized corrective reading enjoyed limited success among amateur readers, who more often than not left the text clean of marginalia and, when providing it, did not offer the kinds of corrections other writers sought to elicit.

Perhaps aware of this treatment of Chaucer’s texts, Lydgate’s opposing invitations to emend *Fall of princes*, following the pattern established by the invitations of *Troy book*, also seem to have enjoyed mixed success. Of twenty-nine manuscripts of *Fall of princes*, twenty-six contain marginalia from readers other than the text’s scribes. Of these twenty-six, only two contain the kinds of reader corrections Lydgate specifically elicits, University of Chicago Library MS 565 and British Library Harley 1766 – and in the latter, the changes seem to have been motivated not by a desire to improve the text, but to erase references to the papacy. By and large, scribes effected more corrections to texts in the act of copying them than did amateur readers, whose desire to participate in texts seems to have pursued other imperatives than textual emendation, such as that of noting passages of personal and moral significance.

This seeming disregard by readers of invitations to engage in corrective reading evokes a parallel with the current treatment of crowd-sourced editing. Aside from the highly publicized examples of crowd-sourced editing, such as that employed by Noah Wardrip-Fruin and *Shakespeare quarterly*, the practice of crowd-sourced, open-access peer reviewed editing has subsided since 2011, and attention has shifted to developing tools that facilitate open access to published work, rather than work pre-publication. While diagnosing the challenges facing such a complex practice that extends across disciplines and fields of study is beyond the scope of this book, let alone this chapter, and while noting that implementation of crowd-sourced peer review today differs in scope and aims than the medieval writer inviting his original audience to correct the text, one issue both rely on is the social aspect
of corrective reading. This social aspect, however, is largely fictive: medieval writers and readers can only enact participation with the text, not with each other; modern crowd-sourcing attempts like that developed by *Shakespeare quarterly* rely on novelty to draw attention and participation. Situating crowd-sourced editing projects within pre-existing communities has been attempted only by Wardrip-Fruin, who then found himself too overwhelmed to attend to the feedback. It could be, then, that audience take-up of corrective reading in medieval and digital media foundered in part because of how communities that foster investment in the writer–reader relations promoted by crowd-sourced approaches such as corrective reading struggle to coalesce around the texts. Its lack of success may – to inch out further on the limb of speculation – centre around the core of its activity: making readers work. Readers, as will be discussed further in the final chapter, may be resistant to the forms of labour enjoined upon or elicited from them through participatory reading practices, choosing instead to apply their efforts elsewhere.

The absence of widespread engagement in corrective reading in late-medieval England thus speaks to how the invitations to emend have contributed to literary culture in other ways than textual correction, primarily by creating recognition of the agency and ability of readers to participate in literary culture through their reading practices, by creating a discourse focused on that participation, and by the various ways these invitations legitimize the participation of certain groups in contrast to that of others. One of the important consequences of the promotion of open, corrective reading by late-medieval writers is that it positions the community as validating a work and the standards it represents. This is an issue cogent today in ongoing debates about open access, which suggest both promise and threat in the way they offer to shift the responsibility of validation away from closed-access models and institutionalized authority. The transition away from validation of a work by the learned, Latinate elite to the lay, vernacular commons suggests that late-medieval writers, even as they desired to develop and defend their own growing authority, viewed readers – if properly educated about how to read effectively in ways that subordinated their work to the aims of writers – as powerful partners in the development of literary culture. That the interest in corrective reading emerges around and continues to develop and flourish even after the introduction of print suggests that writers and printers, too, saw in it a valuable tool for developing literary community.
The positions taken by Lydgate in *Troy Book* and Chaucer in *Troilus and Criseyde*, as well as that of Norton in the *Ordinal of alchemy*, and other writers who invited readers to emend their texts, are marked by encouraging emendation by all readers, by some under specified limitations, or discouraging it altogether. In the hybrid invitations mentioned previously, writers qualify open access to emendation in significant ways. A common element of these restrictions on open access includes the gender of their readers. Between 1385 and 1495, for example, 20/23 texts cite gender as a primary or secondary issue in promoting hybrid, not open, access to corrective reading. Furthermore, 11/23 of these texts can be classified as religious in focus, suggesting concerns that perhaps respond to the restrictions of Arundel’s *Constitutions*. Published in 1409, the *Constitutions* are often credited with creating a perilous climate for writers, translators, and readers of devotional material, because of concerns about being affiliated with Wycliffitism.\(^{42}\) While critical discussion in recent years has nuanced long-standing perceptions about the repressive influence of the *Constitutions*, certainly the discourse focused on restricting open access to corrective reading that emerges in the intersection of religious texts and audiences of women indicates that writers attended to how emendation invitations and the reading practice they promoted might affect or respond to such topical concerns.

A prominent example of this awareness of the topical implications of corrective reading can be identified through the emendation invitation provided in the prologue to the *Mirror of our lady*. This commentary on and partial translation of the Bridgettine Office used by the nuns at Syon was composed between 1420 and 1450. The writer of the prologue establishes a partially open, partially closed hybrid invitation to emend the text when he states, ‘Lowely I submyt me and all oure wrytynges, and other werkes to the correccyon of oure mother holy chyrche, & of the prelates and fathers therof, and of all that are wyser and can fele better’. The text conveys some openness to emendation, in that the writer directs the invitation to unspecified male religious, while at the same time discouraging participation from the audience to whom the text is directed, nuns of Syon. To them, he immediately turns and says instead that he, ‘Besch[es] you all way mooste dere and deuoute systres to praye that bothe thys, and all other dedes be euer rewlyd to oure lordes worship’.\(^{43}\) That is, the work of correction should be left in the hands of men. For the male, clerical audience,
emendation is an open possibility; in contrast, the writer encourages women readers to pray.

This attempt to limit performance of corrective reading to a subset of the text’s audience creates an equivalency between emendation and prayer. Emendation and prayer are opposing, but equivalent responses. This gesture also seeks to control readers’ participation by gendering a particular type of reading activity, textual correction, as masculine work. Emendation is men’s work; prayer, women’s. Accordingly, the practice of corrective reading, which can be leveraged to establish a discourse of control over readers even as it authorizes readers’ agency, thus contributes to a gendered discourse of late-medieval censorship. By restricting women’s responses to prayer rather than emendation, the text seeks to curtail women’s scholarly activities. This gendered treatment of corrective reading additionally represents women’s participation as ephemeral, eschewing material textual legacies.

Similarly, concerns that readers or media consumers might go too far, do too much to the media with which they participate, drive much legislation aimed at controlling or even supporting digital media today. For example, the non-profit organization Creative Commons provides text for licenses that help rights owners negotiate the permissions given to others for the use of their works. Licenses address permitted forms of audience participation, interaction, and transformation of works, attempting to mediate among the agency, authority, and rights of users and those of a work’s creators. These and other efforts address contemporary concerns regarding the sometimes-threatening ability of media consumers to become creators of modified and re-envisioned material. As participatory media have increased in popularity and ease of access, a ‘backlash’ has developed ‘of new technologies, softwares, and legal methods that actively seek to prevent alteration and re-distribution of texts’. Such concerns form a modern practice in comparison to which we can consider late-medieval attempts to control the creative, participatory abilities of readers, who may, at any moment, assert their own control over a text.

In views that express concern regarding how readers’ changes could threaten the integrity of their works, medieval writers’ comments can consequently be seen to reflect a developing awareness of their works as the product of their own creative effort. This presages a developing recognition of creative literary production as intellectual property that goes hand-in-hand with the developing notion of authorship as discussed by Alastair Minnis. That is,
as writers explored strategies to define and secure their status as authors, not merely copyists collecting or adding to the work of ancient authorities, writers saw readers as possessing the ability to affect that status. The developing authority of writers could be threatened by corrective readers running amok. These concerns regarding the agency of readers are part of the landscape of late-medieval England, for reader authority intersected with concerns about heresy, particularly in the wake of Arundel’s *Constitutions*. As has been discussed by Katherine Kerby-Fulton, however, modes of literary censorship antedate and postdate the *Constitutions*, and an attitude of tolerance existed even in the climate from which the *Constitutions* arose. In consequence, recognizing the role of participation as articulated through the discourse of corrective reading in late-medieval English literature provides insight on premodern ideas of textual ownership. Yet, as in today’s culture, reader participation could be as problematic as it was desirable. Participatory reading practices, even as they offered a means for instructing readers in how they should behave towards texts, motivating them, and engaging them in a literary community, could be – for some writers – too accessible, too extensive, and too empowering.

Although the roles of women in restrictions imposed upon corrective reading are especially telling for how medieval writers distinguished among their potential audiences and the abilities or potential of those audiences, women were not the only readers subject to restrictions placed upon corrective reading. Some writers also articulate separate approaches to Latinate readers and vernacular audiences, whom they view as differently able to engage with the text through corrective reading, and whose participatory reading is, consequently, differently valued. This attitude towards the participatory reading of diverse audiences is articulated in the *Pricke of conscience* around 1400 and in a Wycliffite glossed Gospel of Matthew written in the first half of the fifteenth century. Both restrict corrective reading to the learned, inviting emendation only from ‘any man þat es clerk’ and any ‘lerid man in holy writ’.

John Capgrave, in his *Life of St Norbert*, tells the ‘noble men’ who wish to ‘race / Or rende my leuyys’ – a rather violent means of interacting with the text – that he leaves the work in their hands to do so if they wish. In *Stans puer ad mensam*, Lydgate’s verse instructions about etiquette for children, he simply claims responsibility for errors without encouraging youthful readers to correct them or offering to emend them himself. Lastly, John Russell, who wrote his *Boke of Nurture* on the life of royal household service in the middle of
the century, invites corrections from the ‘yonge gentilmen’ for whom he has written. These attitudes suggest that, even as many writers viewed ‘all who rede or se’ a text as able to engage in corrective reading, they nevertheless distinguished some audiences as better fit for it, and better able to offer productive responses.

Conclusion

The comments about corrective reading described in the texts cited here, from Chaucer to Caxton and beyond, manifest how the participatory practice of corrective reading, as noted today in conversations about open-access editing, enables conferment of ‘group identity’, and facilitates ‘the textualization of social relations’. Through emendation invitations, late-medieval English texts become bodies through which not only changing ideas about readership, authorship, and participation in literary culture become worked out, but that also reflect the complex networks of social relations in an increasingly socially mobile culture. Emendation invitations depict how writers distinguished their work’s reception among various audiences, and categorized these audiences according to networks of patronage, political hierarchy, gender, education, and professional relations. These varying attitudes towards corrective reading further attest to how – as Deleuze and Guattari have observed of the book more generally – late-medieval invitations to emend texts were understood to ‘fix territories and genealogies’. In other words, some texts offered territories open to the emendation of many categories of potential readers, whereas others closed these territories to a select few; through opening or closing the territory of the text, writers sought to shepherd and guide the transmission of their works across generations of copies.

Corrective reading functions as a participatory, interactive reading practice responsive to the materiality of the manuscript as a writing technology. Medieval manuscript culture was predisposed to participatory practices, given the number of ‘nontrivial efforts’ required ‘to traverse the text’ for instance, the work required to expand abbreviations. That corrective reading continues to be deployed as a strategy for relating to readers in printed texts attests to the slowness of recognition that print represented a technology that functions in ways other than how manuscripts function. The use of corrective reading invitations in print books for decades after their introduction also attests to the ongoing influence of the idea of the participatory reader who contributes productively to
the transmission of a text. Furthermore, in a practice to which I will return in later chapters, materiality becomes significant for the way it shapes the possibilities of participatory reading practices. Corrective reading can be made possible and recommended to readers because the material body of the manuscript is accessible to readers’ interventions. In advocating for its use, medieval writers give careful thought to the different ways material conditions impact and facilitate reading experiences. Finally, the invitational strategies that focus on emendation have not been recognized as contributing to late-medieval constructions of readers, yet manifestly they fashion the reader in important ways. They also affect the reception of medieval texts. Scholars now recognize that such contributions – emendations, modified prefaces, added passages – create texts worth study, not texts viewed as ravaged by the errant interventions of wayward readers. Beyond the reconsideration of the value of reader emendation stands the participatory reader, whose figure gave focus to writers’ expectations about their audiences.

References to reader participation, rare in Middle English or Anglo-Norman works before the late fourteenth century, flourish in the fifteenth. This rise in the articulation of a discourse of participation provides insight on developing expectations for lay vernacular readers, as the increase in literacy intersected with the growing popularity of the English vernacular and the heightened production of books. Participation facilitates transformative reading practices: in the late Middle Ages as now, the spread of access to materials and technologies created both controversy and acclaim, those who wanted to support and those who wanted to control. The presence of participation gestures toward textual practices and a concept of the reader that we have only recently begun to access, a reader whose deep engagement with texts could create as well as receive, and traces a more communal relationship between writer and reader that was later lost as the authority of print became fixed.

Texts inviting or discouraging participation, such as *Troy Book* and the *Ordinal of alchemy*, illustrate tensions among author, text, and readers that were occasioned by participation. They also demonstrate that such participation, as useful as it could be, was not always desirable. The empowered reader could at times be a threat as much as an ideal, and the tensions raised by participation could occasion ‘a struggle for control over the authorial “purity” or “authenticity” of the text’. Such struggles encompass a variety
of participatory practices. These struggles also reflect ongoing negotiations about emergent ideas of authorial control, textual integrity, and reader control. Lydgate, Caxton, and other writers position themselves as writers willing to collaborate with readers who are eager to engage deeply and constructively with their works – a position that does much to inform readers of the attitude with which they were expected to receive texts. Encouraging or discouraging corrective reading thus became a means of educating readers regarding how they were to read, and the behaviours appropriate reading entailed. Corrective reading and participatory reading practices more generally, in effect, contributed to a discourse of reading etiquette. Accordingly, the study of participation in medieval texts enables us to understand previously overlooked details of the reading process. Corrective reading practice, as elicited or discouraged in these works, including Lydgate’s and the dozens of others that explicitly invite it, also demonstrates medieval recognition of the fluidity of texts within the register of reading practices.

By seeking out evidence for participatory reading practices, and recognizing how corrective reading offers a practice for textual participation, we can also turn to studies of other readers, such as the professional readers of the Douce *Piers Plowman* or Guillaume Machaut’s *Voir Dit*, and re-evaluate such responses. The professional readers who modify, alter, or otherwise leave their traces through the text of these works respond to them within what is clearly becoming a participatory tradition focused upon the practice of corrective reading. We may, then, also look for how other readers might resist or alternatively interpret the discourse of corrective reading, as exemplified by Norton, who discourages corrective reading only to promote, instead, an alternative of disciplined, temporally contextualized rereading.

In considering who participated in response to emendation invitations, I have here and above distinguished in some contexts between the category of all readers and that of scribes as professional readers. Doing so follows recent critical trends that examine how scribes acted as the first readers of texts. Yet this is a point worth re-evaluating in the light of emendation invitations and the corrective reading they promoted, particularly with reference to writers’ own sense of authority. That is, by themselves treating scribes as part of the community of their readers, late-medieval writers distinguished more emphatically between their roles and their authority and that of scribes. Given that St Bonaventure’s long-standing definition of a writer included scribes in their role
as copyists, the choice of late-medieval writers to treat scribes not as fellow-writers, but as readers, signals how these writers sought to use emendation invitations to further authorize themselves. In other words, emendation invitations offered a rhetorical, persuasive discourse by which to distinguish authorial from scribal work. This makes a distinction between creative effort, textual reproduction, and emendation: in these writers’ eyes, they are not only different types of work, but they belong to different literary identities. One type of work is that of the author. The others are situated as enjoying a lesser status that provides the ground for reclassifying scribes not as writers, but as readers. That writers nevertheless occasionally sought to distinguish scribal work as somewhat other than that of the general reader also testifies to how uneasily scribes fit into the category of readers. Consequently, the emendation invitation crafts a writer–text–reader triumvirate that strategically elides how scribes moved between the roles of writer and reader. In this way, variations in the discourse of corrective reading attest not only to the tension that surrounded the identity of the writer and the identity of the reader, but also to how the definition of who belonged in the category of ‘reader’ played a crucial role relative to the changing definition of ‘writer’.

These are conversations pursued today in discussion of academic publishing trends. That they arise in a moment that, in parallel to the situation of late-medieval England, is characterized by increasingly diverse modes of literacy and accompanied by technological developments that increase ease of access to both books and writers, is not coincidental. Such conditions clearly impact how boundaries between writers and readers are both distinguished and deterritorialized; they also influence participation and its development as a culture of practice. Accordingly, it may be worth consideration, today, how Lydgate, Caxton, Chaucer, Norton, and other writers viewed the possibilities of accessible emendation and its potential to shape communities. Rather than pursuing the model of the text that eventually develops in the long history of print, that of the fixed text to whom the readers’ contributions materially and socially remain constrained and marginalized, it could benefit to think of alternatives. The open-access style of emendation invitation situates the manuscript text and its iterations, as its copied and recopied, as a nexus for social interaction between writers and readers; it contributes to the development of a social economy of writer–reader relations that has not yet become dependent upon economic exchange. Instead, the social economy facilitated by
Corrective reading figures participation as central to responding to a defining characteristic of manuscript culture: the possibility for textual flexibility. The work, even after its dissemination to the public, is never fixed. In its lack of fixity opportunity arises for ongoing social exchange, mediated through the pages of the text. Given the as-yet inability of crowd-sourced editing to affect in substantial ways the institutional editing practices of academic publishing that might, as I have suggested above, struggle in part because of the absent social culture around sites for disseminating work pre-publication, what culture might flourish within the realm of academic publishing today if digitally distributed essays and monographs were viewed as sites for ongoing conversation and exchange between writers and readers?

Finally, the practice of corrective reading, demonstrated through the emendation invitations that solicit it, continues into the first centuries of print culture. As David McKitterick discusses in his detailed account of reading practices and book history, ‘From the sixteenth to the eighteenth centuries, readers were requested by authors, stationers and printers alike to amend with the pen what had been set and printed in type’. Writers did not cease to invite readers to participate and contribute materially to their texts with the introduction of print; such invitations continued to be a commonality of the possible ways in which readers could participate with those responsible for textual production and dissemination. Reliance upon modes of participatory reading, even well after the development of print culture, continued and flourished. Yet in how these invitations to emend identify the person to receive corrections, emendation invitations also reflect growing awareness of the particular material considerations of print. Readers, no longer able to effect changes to texts themselves in ways that would be transmitted to successive copies of a work, were invited to submit suggested corrections not only to authors, but to printers and publishers as well. The identification of alternatives to authors for receiving corrections gestures to the role played by printers both as gatekeepers to publication and as professionals concerned about, and interested in increasing, the fixity and reliability of printed texts. Thus, although Caxton represents the continuation of medieval practice in how he invites readers to engage in effecting corrections themselves, subsequent reliance of the emendation invitation, by the late sixteenth century, reflects how technological change affected not the act of corrective reading itself, but the material realities of changing modes of textual tradition. The continuance
of emendation invitations also suggests that, even though the fixity of the printed text limited the transmission of readers’ corrections to subsequent copies of the work, corrective reading continued to play a valued role in shaping relations among writers, readers, and printers, and the texts that interested them all.

Notes

1 Representative comments about the humility topos describe it as no more than the passing offer of ‘a hackneyed humility’ (Margaret Connolly, in John Shirley: book production in the noble household in fifteenth-century England [Aldershot, UK and Brookfield, VT: Ashgate, 1998], 45) or the merely ‘topical expression of (usually false) modesty’ (John Dagenais, The ethics of reading in manuscript culture: glossing the Libro de Buen Amor [Princeton: Princeton University Press, 1994], 24).

5 See in particular Seth Lerer, Chaucer and his readers: imagining the author in late-medieval England (Princeton: Princeton University Press, 1993), and Stephanie Trigg, Congenial souls: reading Chaucer from medieval to postmodern (Minneapolis: University of Minnesota Press, 2002).

6 Quotes from Chaucer’s works come from the Riverside Chaucer. 3rd ed., ed. Larry D. Benson (Boston: Houghton Mifflin Co., 1987). Here, the lines cited are from V.1793–8 and 1856–9 in Troilus and Criseyde.

Corrective reading

9 The terms ‘proleptic’ and ‘retrospective’ are discussed more fully by Wakelin in ‘Instructing Readers in Fifteenth-Century Manuscripts’, at 433–4.

10 Quotations here and following are from the *Troy Book*, lines P.379–84. See Appendix A for other examples of emendation invitations.

11 *Ibid.*, V.3476, 3484, and 3494. Shortly after this passage, Lydgate echoes Chaucer’s words in his poem to Adam Scriveyn when he writes that he wonders if there might be anyone capable of following in Chaucer’s traces, and if there is anyone, Lydgate is, ‘Besechyng hem, with her prude loke, / To race & skrape þoruʒ-oute al my boke, / Voide & adde wher hem semeth nede’ (V.3537–9). In addition to his earlier open call for emendation, here Lydgate makes a Chaucerian, learned request for editorial intervention from a colleague.

13 See, for example, Thomas Hoccleve’s *Regiment of princes*, in which Hoccleve explains: ‘For whan a man y-falle in-to errour is, / His brother ought hym counselle & rede / To correcte & amende his wikked dede; / And yf he be vexed with maladie, / Mynystre hym helpe, his greef to remedie’ (lines 2488–92, in the edition ed. by F. J. Furnivall, EETS extra series [hereafter e. s.] 72 [London: K. Paul, Trench, Trübner & Co., 1897]).

15 See, for example, John Lydgate’s *Troy Book*, where one of the invitations (discussed earlier in this chapter) occurs in book five of the poem.

16 Norton has been little-studied even in the wake of the publication of a critical edition of the *Ordinal*, which circulated in more than two dozen manuscript copies. In what is perhaps the most substantial article devoted to the study of Norton since the publication of the critical edition in 1975, Cynthea Masson argues that Norton approaches his audience with a ‘pedagogical agenda’ (‘Poetry and pedagogy in Norton’s *Ordinal of alchemy*’, in *Florilegium* 17 [2000], 45–58, at 46). For the critical edition, see John Reidy, ed., *Ordinal of alchemy*, Early English Text Society o. s. 272 (London: Oxford University Press, 1975), from which all quotations are drawn.

17 See Appendix A for examples of other writers employing open-access corrective reading invitations.
Norton explains that the text is ‘sett owte in englishe blonte & rude, / For this is so made to teche a multitude / Of rude peple’ (lines 3089–91).

Norton and Lydgate both write from the perspective of authors utilizing manuscript for the transmission of their works, but the sentiments they express change little with the introduction of print. Many of Caxton’s prologues may be viewed almost as quotations of Lydgate (see Appendix A), and the expectation that readers may alter the texts they view in error flourishes over the course of the sixteenth century. For example, see Percy Simpson’s *Proof-reading in the sixteenth, seventeenth, and eighteenth centuries* (Oxford: Oxford University Press, 1970), 25–31. Simpson’s offers the most extended analysis of the continuing use of what I call emendation invitations in early modern print culture.

For entries into the discussion about open and closed access, see Peter Suber, *Open access* (Cambridge, MA: MIT Press, 2012); Martin Paul Eve, *Open access and the humanities: contexts, controversies, and the future* (Cambridge: Cambridge University Press, 2014).

For posts by Wardrip-Fruin with readers’ comments, and for Wardrip-Fruin’s evaluation of the process, see [https://grandtextauto.so.ucsc.edu/category/expressive-processing/](https://grandtextauto.so.ucsc.edu/category/expressive-processing/). For the *Shakespeare Quarterly* crowd-sourced editing issue (61:3, Fall 2010), see its introduction by Katherine Rowe, guest editor, at [http://mediamjomns.futureofthebook.org/mcpress/ShakespeareQuarterly_NewMedia/](http://mediamjomns.futureofthebook.org/mcpress/ShakespeareQuarterly_NewMedia/).

On the development and identification of this generation of internet culture as a sharing economy, see Nicholas A. John, ‘Sharing and Web 2.0: The emergence of a keyword’. *New Media and Society* 15:2 (2012), 167–82.

26 See Appendix A for other examples of invitations to emend; that quoted from William Caxton can be found in his publication of the *Golden Legend*, excerpted in *The prologues and epilogues of William Caxton*, EETS 176, ed. W. J. B. Crotch (London: Oxford University Press, 1928), at 73.

27 This point also applies to the expansiveness of medieval media practices, an issue addressed further in subsequent chapters.

30 Although not to any great degree – no work of interactive fiction of which I am aware positions the writer at the keyboard, able to respond in person to each interaction of readers with her text. Rather, the modifiability of hypertext fiction produces an illusion of readers and writers engaged in dialogue through the text and the technological means of displaying it. This point further illustrates what Wendy Chun refers to as the fantasy of freedom (here, the freedom to converse beyond the physical boundaries of immediate presence) developed in digital media discourse (*Control and freedom: power and paranoia in the age of fiber optics* [Cambridge, MA: The M.I.T. Press, 2006]).

31 It is worth noting that Wardrip-Fruin discovered this expectation to be a fantasy: he did not have time to address the comments he received. See ‘Blog-based peer review: four surprises’, *http://grandtextauto.org/2009/05/12/blog-based-peer-review-four-surprises/*, at paragraph 21 and following. This suggests, as will be discussed below in its medieval application, crowd-sourced, open-access approaches did not produce a sustainable practice for writers or readers.

34 For a magisterial response to Eisenstein’s argument, along with a detailed counter depicting seventeenth-century attitudes towards the instability of printed texts, see Adrian Johns, *The nature of the book: print and knowledge in the making* (Chicago: University of Chicago Press, 1998).

35 In this and all the ratios following, the first number represents the portion of open invitations; the second, closed invitations; and the
third, hybrid invitations. For this first ratio, the raw totals of open, closed, and hybrid invitations are: 1, 1, 2.

36 For 1480–99 the raw numbers of invitations total 11, 2, 4.
37 See Appendix A for quotations from texts providing invitations to emend.
41 As Daniel Wakelin argues in *Scribal correction and literary craft: English manuscripts 1375–1510* (Cambridge: Cambridge University Press, 2014), however, emendation is one of the ways scribes commonly adjusted and interacted with the texts they copied.
42 Subsequent scholarship has complicated the argument that the *Constitutions* generated a climate of censorship and can be partly held responsible for the ‘dullness’ of fifteenth-century literature, but for the most influential voice supporting this analysis of the *Constitutions* as exerting a repressive effect on vernacular religious literary composition, see Nicholas Watson, ‘Censorship and cultural change: vernacular theology, the Oxford translation debate, and Arundel’s Constitutions of 1407’. *Speculum* 70:4 (1995), 822–64. For an overview of responses to Watson’s argument, see the special issue of *English Language Notes* 44:1 (2006), ‘Vernacular theology and medieval studies: literary history and the religious turn’, ed. Bruce Holsinger and Elizabeth Robertson, dedicated to this topic.
45 See Minnis, *Medieval theory of authorship*.
47 The *Pricke of Conscience* quote comes from *The pricke of conscience (stimulus conscientiae): a Northumbrian poem by Richard Rolle de Hampole*, ed. Richard Morris (Berlin: A. Asher, 1863), line 9587; the Wycliffite gloss is transcribed in Margaret Deansely, *The Lollard Bible and other medieval biblical versions* (Cambridge: Cambridge University Press, 1920), at 457. Excerpts from both texts are available in Appendix A.

48 All the texts referenced above are excerpted in Appendix A. The Capgrave quote comes from *The life of St. Norbert by John Capgrave*, ed. by Cyril Lawrence Smetana (Toronto: Pontifical Institute of Mediaeval Studies, 1977), lines 19–28. John Lydgate’s *Stans puer ad mensam* and John Russell’s *Boke of nurture* are available in *Early English meals and manners*, ed. F. J. Furnivall. E.E.T.S. o. s. 32 (London: N. Trübner, 1931); the relevant lines of *Stans puer* are 92–9 and, of the *Boke of nurture*, 1235–8.

Published in 1549, *The book of common prayer* for the first time presented the reformed services for worship as reconceived in the wake of English separation from the Church of Rome. In considering medieval reading practices, a passage from its preface deserves particular attention. The preface targets for condemnation the consequences of what it considers flawed Catholic practices of textual organization, stating that the Bible ‘hath be so altered, broken and neglected by plaintyng in uncerteyne stories, Legendes, Responds, Verses, vaine repetitions, Commemorations and Sinodalles’, and asserts that such additions ‘breake the continual course of the reading of the scripture’ (Aiir–iii’). *The book of common prayer* thus targets practices of textual organization that can be considered collative, relying on the collation of multiple external texts or excerpts drawn together into a single work.\(^1\) Perhaps the most commonplace example of such a work is one that dominated literary and devotional culture in the later Middle Ages, the book of hours. How books of hours compiled texts together, drawn from the Bible and liturgical books, leads directly to the condemnation issued in *The book of common prayer*. As addressed in the preface, this type of textual organization also prompts a particular reading practice.

This reading practice is known as ‘nonlinear’, ‘nonsequential’, or ‘selective’ reading, and it is most conventionally performed when apprehending a text organized into sections, called ‘nodes’ or ‘lexia’ in digital media.\(^2\) The number of terms to describe the concept refers to an inherent contradiction: nonlinear, discontinuous, nonsequential reading can still be said to occur linearly, continuously, or sequentially, as a reader follows the order of words in grammatical sequence or creates a sequence even out of image and text located in separate regions of the page. I have followed the usage of digital media critics in my preference for the term ‘nonlinear’, in part because it also relates to terms used
Nonlinear reading

to describe both structural and narrative organization, as will be discussed below. In nonlinear reading, readers select their own paths of navigation among lexia, as, for example, when someone clicks from one link to another to move between pages of a website. In its discussion of textual organization and reading, *The book of common prayer* represents texts designed to facilitate nonlinear reading as characteristic of outmoded, misleading ideology. In their stead, *The book of common prayer* encourages religious reform by promoting changes to reading practices, focused in particular on a linear approach to reading scripture.3

The passage from *The book of common prayer* demonstrates several points relevant to the study of medieval reading practices. It indicates that the form of the codex was not viewed as inherently linear, for the way that texts were included and arranged could invite readers to navigate its pages in nonlinear ways. It also shows how, by the mid-sixteenth century, textual organization and reading practices could be linked together to such a degree that the kinds of ‘broken’ or ‘continual’ reading that modes of textual organization prompt scarcely need explanation. In effect, *The book of common prayer* demonstrates that writers understood how their organization of texts bore consequences for the ways people apprehended them. For example, arranging a work to be uninterrupted by the ‘plaintyng’ of other lexia prompts a ‘continual course’ of reading. In other words, at its most basic, linear textual organization prompts linear reading, and nonlinear organization prompts nonlinear reading.4 Building on these points, in this chapter I contend that medieval writers produced texts shaped by norms of textual organization to influence the results of reading practices, in terms of both apprehension and interpretation.

Although nonlinear reading invitations flourish in late-medieval English literature, they do not originate in this period any more than nonlinear reading originates in the era of digital media. Rather, as with emendation invitations, they trace their roots to a long tradition of sophisticated Latinate reading practices stretching back for centuries. Martin Foys argues that Anselm’s use of nonlinear reading – particularly through the hypertextual organization of his *Orationes sive meditationes* (Prayers and meditations) into sections accessible nonlinearly and dynamically – ‘erases [the] interface’ of the physical text’s material manuscript instantiation in order to ‘rende[r] the act of reading transparent’ (46).5 In contrast, consider how Walter of Chatillon, writing in the 1170s, references nonlinear reading in *The Alexandreis*: at the end of the prologue, he
writes, ‘Nunc autem quod instat agamus, et ut facilis que quesierit quis possit inuenire, totum opus per capitula distinguamus’, that is: ‘Now let us undertake what is at hand and mark out the whole work with chapter headings, so that the reader can more easily find what he seeks’⁶ (ll. 40–3). Walter’s explanation of the division of his work into chapters conveys his recognition that his Latin-literate, learned readers already know how to read nonlinearly, and will read nonlinearly regardless of the organization of the text. He indicates that he only hopes to make that practice easier for them through his provision of markers to identify textual divisions.

Late-medieval English writers’ attempts to introduce these practices to their audiences of the fourteenth and fifteenth centuries testify to how they used these Latinate reading practices to teach their readers. These readers did not resemble the writers themselves, learned in Latin, nor did the writers even closely resemble those of previous centuries. In their turn to practices like nonlinear reading, such writers, as Vincent Gillespie notes, were ‘prompted by the increasing range of vernacular materials available to compilers and collectors and by the increasing sophistication of readers and of the demands they were likely to make on books’.⁷ Yet, in their approach to nonlinear reading, late-medieval writers also move beyond the demands of readers by transforming it, for writers recommending its use to their readers turn to nonlinear practice to teach their readers not only how to read in a sophisticated way, but also to reflect writers’ growing understanding of themselves as authorities on their texts and creators of a relationship with their readers that relies on their readers’ participation with them and their texts. This use of a reading practice to represent writers’ and readers’ authority again, as with emendation, testifies to a developing discourse of participatory reading that also reflects increased understanding of what reading by unlearned audiences could entail, and shows how writers conceived of the ways they might participate through their texts with readers. It also describes what work readers could be expected to accomplish.

Nonlinearity in the Orchard of Syon

One of the expressions of nonlinearity in late-medieval English literature most familiar to today’s audiences of medieval literature appears in the Orchard of Syon, a fifteenth-century translation of the dialogues of Catherine of Siena. The instructions given to readers in the prologue by the translator deploys language common
to other explicit descriptions of late-medieval nonlinear reading. Consequently, it represents an exemplary norm by which to assess nonlinear reading. The translator writes:

> Therefore, religiouse sustren, in þis goostli orchard at resonable tyme ordeyned, I wole þat ȝe disporte ȝou and walke aboute where ȝe wolen wiþ ȝoure mynde & resoun, in what aleye ȝou lyke, [and] namely bere ȝe savouren best as ȝe ben disposid. ȝe mowe chese if ȝe wole of xxxv aleyes where ȝe wolen walke, þat is to seye of xxxv chapitres, o tyme in oon, anoþir tyme in anoþir.8

Comparing the text to an orchard and its chapters to the paths within it, the translator encourages readers to ‘savour’ the chapters in the order that suits them best. This recommendation immediately links the mode of apprehension, nonlinearity, to interpretation. Apprehending the text nonlinearly promotes its interpretation as desirably consumable in an intense, lingering way. This is a feature shared among the instructions to read nonlinearly in the Orchard and other fifteenth-century Middle English works, and it depicts a practice that supports the kind of intensive reading predominant in book culture in the Middle Ages and early modern periods. In the Orchard and texts like it, apprehension is frequently and explicitly connected to interpretation, specifically in the way nonlinear apprehension promotes affective interpretation.9

In contrast to Walter of Chatillon, who represents his readers as employing nonlinear reading in order to seek out particular passages already known in advance, and therefore already familiar with its practice and simply in need of navigational aids, the Orchard translator takes an approach that implies that his readers, an audience of nuns, will not initially understand how to take advantage of the division of the work into chapters unless he explains to them how they should access this division of the text through nonlinear reading, and describes the advantages nonlinear reading offers to interpretation. As with emendation, the treatment of participatory reading differs in its application to different genders. The majority of explicit invitations to read nonlinearly emerge in texts aimed at audiences of women, whom writers assume need the basic instruction in nonlinear reading – even as most women readers learned to read via the book of hours, inherently a nonlinear text. In contrast to Anselm’s use of nonlinearity, the author of the Orchard’s prologue emphasizes the textual organization not to make it transparent, but to explain it to readers that they become mindful of how they read and how the organization of the text can
further their experiences with it in ways that help them develop as more sophisticated readers.

Another prominent feature shared among the Orchard and other invitations to read nonlinearly emerges through how nonlinear reading works relationally by allowing readers to juxtapose sections or chapters of a text. The reader, at her own discretion, determines the sequence in which she proceeds through the text. It is a nonlinear sequence in which, as another fifteenth-century translator explains, ‘is not nede to begynne at the begynnyng, but where it plesith hym best’: the reader begins and concludes reading in whatever passage of the text she prefers.\(^{10}\) Any text can be apprehended in this way, although the Orchard and a few other texts that advocate nonlinear reading explicitly turn to textual division to explain how it might be accomplished.

In addition to its explicit promotion of nonlinear reading as a reading practice requiring participation among reader, text, and writer, the Orchard of Syon prologue uses the metaphorical language of participation that in later chapters will be explored as literal aspects of reading praxis. These metaphors focus on place and mobility, consumption, and time. Use of this metaphorical language of participatory reading in this fifteenth-century English text demonstrates how deeply participation as a mode of reading experience functions in late-medieval literary culture, and how it conveyed meaning that also shapes perception of its literal practice.

First, the translator recommends readers treat the text as a physical space, an orchard, which is laced through with many divergent paths. This speaks to the nonlinear work of reading, but also contextualizes it in a location remediated by human hands, characterizing Catherine of Siena’s Dialogue concerning divine providence dialogue as both cultivated and organic in nature: in other words, blending divine creation through the filter of humanity. This metaphor, of course, evokes the conventional medieval understanding of nature as reflecting divine teachings, and humanity’s role as engaging with nature in order to learn moral and theological lessons.\(^{11}\) The orchard metaphor, in its reliance upon a cultivated place, encourages readers to think about nature in subordination to both the will of God and the will of humans. Yet this metaphor gains refinement in how it positions the translator as the gardener, cultivating the place for his readers, whom he invites to walk along the paths criss-crossing the orchard, itself a place conventionally feminized through its long association with the virgin Mary, often depicted as reading in a hortus conclusus, an enclosed garden. The
human will to which the garden is most directly subordinate, then, is that of the translator, who presents himself as possessing the authority to shape and control, and invite readers in at his will. The metaphor thus enables the translator to represent his own writerly authority and present readers as subordinate to it: they walk along paths he has created through the textual divisions he recommends they attend to, even as he encourages them to apply their own agency to the pace of reading – lingering to savour – and the paths along which they start or end their reading. Furthermore, readers, acting in accordance with the metaphor, are invited to think about reading as a cultivated activity, one requiring a writer’s guiding hand, but also their discerning engagement. The garden metaphor thus carries the additional weight of negotiating participation between writer and reader played out through the organization of the text and how readers use it.

The text as ground for expression of readers’ agency introduces the second aspect of the metaphorical language of the Orchard, that of mobility. Readers of the Orchard can express their agency through movement within the text, marked by following the paths laid out by the translator as indicated by the division of the text. Movement thus becomes a metaphor describing how the work of interpretation takes place: as readers move through the text, pursuing what paths they choose from among those made available by the translator’s textual organization, they can draw meaning forth from the text, and with that meaning, shape their affective response. The translator so explains in an additional passage from the prologue expanding on the metaphor of the orchard:

In þis orcherd, whanne ȝe wolen be comforted, ȝe mowe walke and se boþe fruyt and herbis. And albeit þat sum fruyt or herbis seeme to summe scharpe, hard, or bitter, ȝit to purgynge of þe soule þei ben ful speedful and profitable, whanne þei ben discreetly take and rescuyed by counceil. (1)

Reading as an act of walking enables orderly reading that facilitates encounters with material that might be appealing or unappealing, but productive either way. Thus readers know that even their difficulties arise from planned encounters shaped by the text and the translator who organized it for their access. Yet by emphasizing mobility, the translator proleptically frames his audience’s reading experience in a way that draws attention to the agentive work of readers who have to thoughtfully select their paths, choose their textual encounters, and work through the savoury or bitter
consumption of the text in order to interpret it effectively and to evaluate its relevance to themselves. Walking thus offers a metaphorical frame for conceiving of the participatory work of reading in a way that emphasizes the authority of the reader, even when that authority is conceived of as a subordinated authority (‘resceyued by council’). Furthermore, reading as walking represents mobility as an active work of development, moving the reader from one state to another. Mobility becomes progression, progression both spatialized through the garden metaphor and also conceptualized as intellectual and spiritual growth. Mobile reading, in this metaphorical usage of walking through the garden of the text, gestures to how reading affects the identity of the reader.

The relationship between participatory reading effected through nonlinear apprehension attains additional prominence through the third use of metaphorical language that suffuses the prologue, the language of consumption. The translator has designed the Orchard to promote the savouring of its text, as he states, and uses the language of taste (‘bitter’, ‘sharp’, and ‘hard’) to represent the affective experience of its interpretation. He returns again to this metaphor in the conclusion of the Orchard, in which he writes, ‘I sey to þou aȝein, seekiþ þis goostly mete wiþ biþ bisye & ofte redyng’ (421). The text is as meat, food for the soul. Consumption and taste function as a metaphorical language of participation representing how the text can be internalized by its readers, signifying their acquisition of knowledge and spiritual improvement through the visceral medium of the body that consumes words as food. Reading becomes a means for gaining sustenance; knowledge becomes written on the body through its metaphorical internalization. Readers thus participate through consumption in the medium of their bodies.

The notion of sustenance implied in the way the Orchard represents reading as consumption introduces the fourth metaphorical category employed in the prologue, that of time. For the translator, reading as consumption can produce ‘speedful’ effects, an adjective that means the effects of this reading are both beneficial and also swift. The translator evokes time again in the prologue when he states that reading can be performed ‘at a reasonable tyme ordeyned’, and recommends readers select among the alley-chapters of the text to spend ‘o tyme in oon, anþir tyme in anþir’ (1), and again in the conclusion when referring to ‘ofte’ reading, reading frequently (421). These references indicate a variety of engagements with time, from the scheduling of reading (presum-
ably according to the affordances for reading incorporated into the daily schedule enjoined upon the nuns by the rules of Syon), to the sequence of reading, to the frequency of reading and rereading, and to the time within which one might expect to experience the effects of reading. In these various treatments of time, the translator of the *Orcherd* shows himself sensitive to the myriad ways temporality enters into the reading experience, and represents these diverse temporalities as subject to the control of readers. For nonlinear readers, time becomes an additional element of this reading practice through which readers might express their agency and control over their reading experiences.

Altogether, these metaphorical representations of nonlinear reading experiences can be adduced, along with the language of emendation discussed in the previous chapter, as contributing to a discourse of participatory reading that pervades late Middle English literary culture. The language draws on many facets of readers’ daily experiences, from the medium of the body as walking and consuming, to the organization of inked words on the page, to the landscapes that surrounded the places they lived and visited. Emerging in the vernacular with vigour corresponding to the increasing audience of vernacular readers, the discourse of participatory reading demonstrates how writers sought to address the challenge these unlearned but eager readers posed to writers, who sought to introduce their readers to reading practices that shape textual interpretation, while at the same time trying to figure out where the limits of their increasing agency ended and that of readers began.

As implied by the prologue to the *Orcherd of Syon* and similar instructions on nonlinear reading, writers by the late fourteenth and fifteenth centuries assumed that readers – particularly women readers – defaulted to a linear reading practice, and needed encouragement or instruction to effect the practice of nonlinear reading. As, however, evidenced by the overwhelming popularity of books of hours, vernacular audiences – including women and other audiences characterized as non-elite – already understood and frequently, commonly performed the practice of nonlinear reading. Consequently, instructions in the practice of nonlinear reading like those attested in the *Orcherd* demonstrate the assumptions writers bore regarding their less-educated audiences. Indeed, explicit instructions addressing any reading practice will demonstrate stereotypes that writers harbour regarding their audiences. In the case of corrective reading discussed in the previous chapter, writers...
Participatory reading in late-medieval England

clearly assumed readers would either fail to read productively if not prompted to correct, or they would alter the text, but not in productive ways; these assumptions were further inflected by the gender of audience and genre of texts. Here, in the case of nonlinear reading, gender also plays a role in the writers’ assumptions that an audience of women will not understand the purpose of textual organization, nor how to use it for reading, unless explained. The instructions thus speak less to readers’ capabilities than they do to the writer’s expectations about his prospective readers.

Yet instructions about nonlinear reading serve more purposes than documenting the application of conventional medieval gender stereotypes to the practice of reading. The instructions in the Orchard emphasize that writers relied on textual organization to make their works accessible to particular practices of reading, whether nonlinear or linear. These writers’ expectations regarding how readers would apprehend their texts also suggest that nonlinearity played an influential role in late-medieval English literary culture. Nonlinear invitations like the Orchard’s were not there simply to teach readers how to read, but how to read in particularly sophisticated ways their writers judged them capable of achieving only with some guidance. Understanding nonlinear practice in this way speaks to the pressures surrounding the work of readers. It also attests to the tension between readers and writers who attempted to use nonlinear reading to shape their works’ reception and interpretation. For the Orchard, being able to place disparate chapters in conversation with each other and the readers’ needs enhances the reading experience and readers’ affective interpretation. In the eyes of Protestant Tudor audiences and writers, struggling to forge a new religious identity and practice, the way nonlinear reading enables the juxtaposition – and even collection – of texts threatens the integrity of the Bible, and becomes associated with Catholicism as a reading practice characteristic of it.

Hallmarks of nonlinear reading are, nevertheless, not exclusive to devotional works like the Orchard. As nonlinear reading responds to textual organization, and as textual organization can intersect with narrative organization, the organization of any text invites scrutiny of the kinds of reading practice it promotes. Indeed, Chaucer suggests the applicability of nonlinear reading to the Canterbury Tales when he suggests that readers who dislike one story may ‘Turne over the leef and chese another tale’. Examining evidence for nonlinear reading across a number of texts further demonstrates different approaches to nonlinear reading. Three modes that
emerge most prominently can be described as elicited nonlinearity, as invited in the prologue of the *Orchard of Syon*; modelled, performed nonlinearity, as evidenced by the late-fourteenth-century poem *Titus and Vespasian*, about the fall of Jerusalem; and hybrid nonlinearity, which combines elicited and performed modes of nonlinearity, as found in John Lydgate’s fifteenth-century sequel to the *Canterbury Tales*, the *Siege of Thebes*.

Assessing the modes of nonlinearity demonstrated in these works, and how nonlinearity becomes a practice facilitating relations with readers, reveals how three late-medieval writers composing both devotional and secular texts leveraged nonlinear practices. The different approaches to nonlinearity adopted by these three writers, particularly marked for the attention of readers in these three texts, demonstrate that the use of nonlinearity as a participatory reading practice was not exclusive to religious works, but instead employed by writers both to organize texts and also to guide reading practice across a range of literary genres, from the devotional to the historiographical. The independence of these texts from one another and the range of genres in which nonlinearity emerges thus testifies to its widespread influence in late-medieval literary culture and reading practice. In addition, these treatments of nonlinearity indicate that writers relied upon the choices that readers could make in ways that could affect not only interpretation, but also literary reputation. Far from viewing readers as passive recipients of instructional work, the writers of these texts figure their audiences as involved participants in the construction of meaning and authority. Consequently, how these texts address and use nonlinearity discloses much about their shaping of readers’ agency and the writers’ own authority in late-medieval England. The study of nonlinear reading practices thus provides an essential contribution to our understanding of medieval reading history and the conditions that determined readers’ literary experiences in the late Middle Ages, even as its frame in the theories of digital media demonstrates an approach for evaluating ‘old media’ practices.

Elicited nonlinearity and guiding readers in the Orchard of Syon

As stated above, the explicit invitation found in the prologue to the *Orchard of Syon* seeks to encourage readers to engage in nonlinear apprehension, thus situating it as an explicit example of elicited nonlinearity. Its reliance upon nonlinearity reading to influence
interpretation based on how readers devote their emotional labour to negotiating and understanding the text emphasizes the agency of readers to determine meaning. Such meaning emerges interstitially, as interpretation takes place through the convergence of the explicit message of the text and the message of the text as readers comprehend its relevancy to their own personal situation. In the context of digital media, nonlinearity elicited in this way is considered a valuable support to motivating readers’ interest in a work, for determining the connection between the text and the reader, and which section of text to negotiate to after reading the current section – these offer a way of making the work personally relevant to readers. As will become clear, medieval writers saw similar possibilities for how their readers might benefit from nonlinear apprehension.

This nonlinear reading practice emerges from what has, in hypertext media, been termed the ‘promiscuous possibilities’ enabled by the comparisons and associations between lexia. The juxtapositions of nonlinear, associative reading (termed hyper-reading) can provoke critical thinking. By eliciting nonlinear reading, the translator of the Orchard urges his audience to adopt an interpretive strategy that enables them to take charge of their spiritual development. The Orchard thus anticipates an audience of readers able to determine thematic connections between chapters, and between their spiritual state and the subjects of each chapter. In this way, the prologue exemplifies the ahierarchical possibilities of nonlinear textual negotiation and underscores the importance of reader participation and choice.

Yet, even as the Orchard emphasizes the centrality of readers’ choices, the reading paths – the ‘xxxyv aleyes’ identified by the translator – are nonetheless predetermined through the organization of the work into chapters and paragraphs. While readers might make any juxtaposition that occurs to them, textual organization facilitates only a specified range of choices, which it makes available through a ‘pre-programmed’ system presented to readers, a situation that evokes the control exerted by the hypertext link. That is, while the hyperlink enables readers to apprehend a text or move between texts in nonlinear ways, the existence of the link itself facilitates a single, predetermined connection between a text and its subsection or another text. In ways similar to the controlling function of the link, the division of texts into chapters imposes structure on nonlinear reading practice that has been determined by someone other than the reader, whether author or scribe.
In the *Orcherd*, the text has not been designed to facilitate connections between nodes smaller than each alley-chapter. Freedom is thus encouraged for readers along certain confines or, more precisely, along emphasized connections. Such gestures as walking among the *Orcherd*’s alleys lead nonlinear readers to be ‘positioned in particular pathways’. As another scholar puts it, the *Orcherd* enables the ‘strategic but controlled empowerment of the text’s reader or recipient’. In this way, the alleys of the *Orcherd* prologue cast into relief the tension between freedom and control in reading the work, even as they also highlight how readers’ ability to effect choices about what they read and in what order they read it was viewed as essential to understanding the text. According to the *Orcherd*, reading is most meaningful when it emerges from readers’ exercise of controlled agency, and the translator designed the structure of the text to elicit, guide, and limit that agency in order to direct his readers’ attention towards the goal of spiritual development.

One consequence of such nonlinear reading in both medieval and digital media is its emphasis on individualized experiences. The choices readers pursue while navigating a work allow them to ‘make sense’ of their nonlinear experience with the text, but in order to make sense of it, ‘the reader must produce a narrative version of it’. Every individual act of nonlinear reading can create, in a sense, a variant based upon the paths taken and texts and portions of text juxtaposed by each reader. The digital media approach to nonlinearity thus draws attention to how a text reflects an act of narrative creation as the reader assembles it. This narrative may differ in its arrangement from the text as presented on a printed page, depicted via the computer, or written in a manuscript.

The individual path negotiated by a reader of the *Orcherd of Syon*, for example, becomes that reader’s narrative experience of the *Orcherd*: a devotional narrative, so to speak. Yet that path is also shaped by the materiality of the manuscript and its practices of textual organization. In the *Orcherd*, and emphasized by the layout of its manuscripts, the ‘kalender’ following the prologue promotes such individualization when it describes several chapters as containing ‘a repeticioun of summe wordis seid bifore’ or ‘a profitable repeticioun of manye þinges, whiche ben seid’. Such summaries can suggest to a reader that these chapters might offer ideal introductory points for beginning reading, or provide chapters that one might read without or before having to read the foregoing chapters. In some of the surviving manuscripts, the
textual organization, its *ordinatio*, is strikingly complex, belying the simplicity of the translator’s description in the preface that the work has simply been divided into chapters for the ease of nonlinear practice. For example, British Library Harley 3423, which dates to the early fifteenth century and represents one of the earliest surviving manuscripts of the text, has an organization that is quite complex. Not only are several folios given elaborate, four-sided borders, but chapter summaries are also noted in red ink, as are the abbreviation of chapter numbers in the text. Each folio is provided with a running title above the text, identifying the book and chapter, and marginal, rubricated glosses are also provided. Consequently, the organizational apparatus of the text and its layout on the page, its *mise-en-page*, serves inexorably to catch the reader’s eye, demanding attention be paid to the ways the text supports nonlinear access.

In these ways, the Orchard yokes proleptic instruction for the reader to organization and layout of text and manuscript in order to facilitate nonlinear reading focused on crafting affective interpretation of the text. In so doing, it exposes the tension between freedom and control that underlies the relationship between late-medieval writers and readers engaged in participatory reading practices. Nonlinear reading relies on readers’ agency even as its treatment by these writers exposes concerns about the consequences of agentive readers for writers and the texts they increasingly saw as theirs. As nonlinear reading relied on readers to draw meaning from the text in ways that put them in the centre of literary activity as the source of interpretive meaning, potentially displacing writers’ authority and even that of the text, how could writers ensure that readers engaged in responsible nonlinear reading and, consequently, interpretation?

**Modelled nonlinearity in Titus and Vespasian**

One particular response to promote effective nonlinear reading required writers to model such reading for their own audiences. Exemplifying performed nonlinearity, the late fourteenth-century poem *Titus and Vespasian* presents a work that models the writer’s own collative, nonlinear reading process. While its presentation of that collative narrative invites linear apprehension, it nevertheless demonstrates the effects of nonlinear reading. In particular, the writer explicitly comments on shifts between narrative episodes. Through performed nonlinearity, the writer of *Titus and Vespasian*
both demonstrates how nonlinear reading can enable readers productively to juxtapose episodes and passages in ways that promote effective interpretation and, in consequence, highlights how nonlinear reading creates space for readers’ interpretive participation.

Although focusing its narrative on the subject of the fall of Jerusalem, the writer’s frequent and repeated emphasis on the foundational tenets and events of Christianity suggests that *Titus and Vespasian* offers a homiletic text aimed at a lay audience desirous of religious and historical education in the vernacular. The writer treats the narrative of Jerusalem’s fall as an occasion for affective devotion, focused in particular on the theme of vengeance. Critical assessment of the poem has primarily focused on its relationship to the *Siege of Jerusalem*, with which it shares anti-Semitic sentiment. Discussion of the poem has largely focused on this element in the context of medieval Christian romance and pious discourse, suggesting that it worked affectively to discourage its audience from sympathizing with Jews. This research has been critical for understanding how these poems functioned culturally for their medieval readers. Yet in comparison to the *Siege of Jerusalem*, *Titus and Vespasian* has been singled out for critical dismissal, which may also respond to the organization of the poem and the reading practice it prompts, as I will discuss. In an unusual move that has occasioned comment from critics, it begins not with a focus on Jerusalem or Titus and Vespasian, but with a lengthy account of Christ’s life and miracles.

Over the course of its more than five thousand lines, *Titus and Vespasian* provides its audiences with a poem organized for linear reading. Yet it is notably episodic in its structure, and comments on this nonlinear organization, which consequently enables the poem to model the results of nonlinear reading based on the author’s collation of passages drawn from a variety of sources. Its organization thus serves to depict the writer’s work as a nonlinear reader, for it presents a text assembled from the juxtaposition of lexia. Modelling nonlinear reading begins in the poem with its incorporation of several other lives and episodes into its account of Jerusalem’s fall, which adapt and expand on a variety of sources identified from the outset, for such incorporation relies upon negotiation among, and selecting from, diverse resources. The poet explains how he has composed the poem through nonlinear associations when he describes how he has relied upon ‘The Gospelles … [a]nd the passioun of Nicodeme … [and] the geestes of emperoures’. Later in the poem, when supplementing the
Participatory reading in late-medieval England

narrative from a new source, he adds after a description of Pilate’s death that ‘The Sept Sages þus doth us telle’ (4391). By identifying his sources as ones from which he has extracted material to incorporate into the work, the writer thus relies upon and embeds within the text his own nonlinear reading experience, his performance of developing a narrative drawn from multiple narrative sources. For example, the writer’s performance of nonlinear reading is staged not only through the identification of sources, but also through extensive, frequent insertions of additional narratives into the story of Jerusalem’s fall in a way that highlight the episodic nature of the poem. This is made more transparent in a description of the poem’s sequencing of a particular collection of episodes: lines 1169–1226 address Vespasian’s illnesses (leprosy and a distressing plague of wasps in his nose), but it is not until more than a thousand lines and several scenes later – after the poem has related the life of Pilate, the story of St Veronica, her encounter with St Clement, his conversion, Clement’s sermon to Vespasian about the Christian faith, and a few other events – that Vespasian is cured. Drawing attention to the moments where he joins episodes together, the poet announces, ‘Agayn to þe story wil we wende’ (1630), and, after explaining the signs that betoken the destruction of Jerusalem and extending the discussion to include St Helen’s discovery of the true cross, the poet declares, ‘Lete we now þe Jewes dwelle. Here gynneth her wrech for to telle’ (1163–4). This episodic structure has been the subject of much of the critical dismissal aimed at the poem, which often focus on its lack of narrative unity.24 Rather than treating these references as providing evidence of inferior poetic craft, however, it is worth considering that different aesthetic preferences may be at play among both medieval audiences and modern critics, for whom literary culture has long been dominated by the linear form of the novel. Indeed, twelve manuscripts of the poem survive, attesting to its steady popularity.25 Survivals of a single poem in more than ten copies is noteworthy, and, although not approaching the numbers of surviving manuscripts of outliers such as the Canterbury Tales, which survives in more than sixty-five manuscripts, speaks to medieval audiences’ enjoyment of Titus and Vespasian. This generous number of surviving witnesses suggests that, despite modern critics’ aesthetic dissatisfaction with it, medieval readers of Titus and Vespasian certainly did appreciate the poem and responded to its marked engagement with nonlinearity.

Through emphasizing the diverse sources brought together to assemble the poem, Titus and Vespasian re-creates for its
Nonlinear reading

Thus, even as readers apprehend in a linear sequence a poem initially designed for linear apprehension, they experience a performance of nonlinear reading laid out through the organization of the text and the stylistic aspects that identify the work of assembling and linking narrative lexia. Furthermore, the writer’s repeated emphasis on his performance of nonlinear reading also reinforces the poem’s and writer’s authority as to guiding readers among various events. Its modelling of nonlinear reading and writing indicates to readers that the events it relates come from richly complex historical moments that would be a challenge to the general reader to negotiate in order to identify which ones bear particular importance and relevance to the subject. By flagging for readers’ attention how he has collected these sources into a single narrative, the writer emphasizes that this work has already been accomplished for the reader through provision of the poem. In this way, the writer of Titus and Vespasian turns to nonlinearity as a means for exerting control over readers: the writer is the judge of relevancy and intersecting historical events, and guides readers’ apprehension to how these events can be juxtaposed. Consequently, the writer also guides readers to practice how such juxtapositions enable them to discern what actions or themes connect episodes and events.

Comparing Titus and Vespasian’s use of nonlinearity to that of the Orchard of Syon emphasizes how diversely medieval texts present nonlinearity to their audiences, inviting them to make it a feature of their reading practice. The Orchard requires nonlinear reading be performed by readers and Titus and Vespasian performs nonlinearity for readers. In order to facilitate the performance of nonlinear reading, the Orchard urges readers to decide the order in which they negotiate among its chapters and thereby determine the rationale that forges connections to or among chapters. In contrast, Titus and Vespasian recreates the experience of nonlinear reading for its audience by emphasizing the text’s creation from and continued juxtaposition of varied sources, events, and lives. In elicited nonlinearity, as in the Orchard, readers create a sequence of texts or textual segments for themselves as they navigate a work. In performed nonlinearity, as in Titus and Vespasian, the text provides readers with a sequence of textual segments linked together not by temporality but by thematic parallels. Whereas the translator of the Orchard expects readers to determine how the chapters apply to
their own lives, and through this personal application develop the connecting, thematic, devotional tissue that will link their experience of the text’s chapters, the writer of *Titus and Vespasian* has already determined the themes that connect its events, and invites readers to determine what these are. A text can also mix these forms of nonlinearity, offering readers both performed and elicited nonlinearity within the same text, as will be demonstrated below in John Lydgate’s *Siege of Thebes*.

Performed nonlinearity enables *Titus and Vespasian* to make available to readers the various texts needed to emphasize the lessons that can be derived from the siege of Jerusalem, including thematic connections among the lives of people who do not meet directly and are brought together only through their presence in Jerusalem. This use of nonlinearity in *Titus and Vespasian* emphasizes the writer’s devotional aims, which emerge most intensely when he concludes the account of Jerusalem’s destruction by juxtaposing it with Pilate’s suicide and the life and suicide of Judas Iscariot. These comparisons emphasize the fates of those who – whether they be people or cities – betray Christ through deed or by harbouring those who injure him. As Maija Birenbaum mentions in her discussion of the juxtaposition of these episodes, layering events linked by shared themes allows the poet to urge readers towards a particular experience. ‘[T]he episodes of miracles of healing and conversion interspersed throughout *Titus and Vespasian*, Birenbaum asserts, ‘supplement and enrich the reader’s affective devotional experience’. Such devotional engagement arises through nonlinearity, which guides readers to recognize the instructive relevance of apparently unrelated episodes and to understand the consequences to those who refuse Christ’s message. Used in a devotional context, this reading practice could underscore particular hermeneutic goals by encouraging readers to interpret the concepts, themes, experiences, or ideas that connect episodes. Performed nonlinearity, because it does not require readers to seek out connections between lexia according to their own associations, can be used as a technique for instructing readers in a predetermined manner. It thus closes down some of the interpretive agency made possible by readers in texts such as the *Orchard of Syon*, which allows readers to choose which lexia to assemble and compare, and thus exercise their own interpretive agency in a highly personalized manner, by predetermining the lexia for comparison, and thus limiting the types of interpretations readers might effect.
Strikingly, however, *Titus and Vespasian* does not directly identify or explicate the thematic connections among its juxtaposed lives and events: that work still remains left to the reader (and, of course, the modern critic). For example, the conclusion of Pilate’s life moves with only the most minimal of interpretive glosses to the story of Judas’s death. Pilate has committed suicide, his body tossed in a barrel thrown to sea; like the Wandering Jew, he will never find rest:

> He nas not worthy, I understande,  
> To have noo rest in water ny londe,  
> He þat demede Jhesu to be spylt  
> To shamefull deth withouten gylt.  
> Now wil I tellen of a aventure  
> Of Judas, Goddes treytoure. (4483–88)

Pilate is found unworthy of rest in death, whether on land or sea, because of his condemnation of Jesus and resistance to acknowledging his guilt for that act. In essence, he becomes subject to God’s vengeance for refusing to acknowledge the significance of Jesus’ status. In a poem that repeatedly emphasizes Jesus’ salvific grace and the several conversions that he inspires – Vespasian’s, Titus’s, Veronica’s, Clement’s – Pilate and the Jews destroyed in Jerusalem’s fall are marked as those who continually reject him. Similarly, the description of Judas’ end concludes with the brief comment that ‘Pus cam Judas to the ende, / To dampnacion withouten ende. / Lete we Pilate and Judas dwelle; / Of þe Emperour I wil you telle’ (4883–6). Instead of explicating the connections between these lives and the fall of Jerusalem, however, the author of *Titus and Vespasian* relies upon readers to identify the thematic, devotional rationale behind his juxtaposition of the death of the city, Pilate, and Judas. Consequently, in its use of performed nonlinearity unaccompanied by extensive explanation, *Titus and Vespasian* provides evidence for the poet’s assessment of his vernacular audience. The poet clearly anticipates readers capable of identifying for themselves themes used to link the events, lives, and stories related in the poem.

In consequence, although inviting reader participation through identification of themes and subjects that arise from its connection of episodes, *Titus and Vespasian* also structures its engagement with nonlinearity in such a way as to limit the choices of readers. These readers are expected to negotiate the text linearly in a way that has them recreating the writer’s nonlinear experience. They
should not associate just any episode with any other, but instead
follow the juxtaposition of specific episodes that evoke didactic,
thematic connections. The work thus exemplifies the controlled
use of performed nonlinearity to enhance readers’ devotional
experience and understanding. Furthermore, drawing on the dis-
course of the previous chapter, it presents nonlinear reading within
a closed network. By collating the relevant sources into a single
poem, the writer of Titus and Vespasian makes it unnecessary for
readers to turn elsewhere for instruction. Other texts that gesture to
nonlinearity may, however, grant more license to readers, a license
afforded, for instance, in Chaucer’s sly comment that readers who
would dislike the ribaldry of the Miller’s Tale may ‘Turne over the
leef and chese another tale’.27

Hybridized nonlinearity in the Siege of Thebes

A work that grants greater license to nonlinear readers is John
Lydgate’s so-called sequel to the Canterbury Tales, the Siege of
Thebes. The first generations of Chaucer’s readers viewed the
Canterbury Tales as needing completion, since Chaucer’s pilgrims
never arrived at Canterbury or returned to London to finish their
story-telling game as promised in the General Prologue. Among
these fifteenth-century responses that sought to complete the work
by adding links to the frame or extending the frame narrative,
Lydgate’s Siege of Thebes circulated most widely in manuscript
and, today, has been assessed by critics as crucial to how Lydgate
authorizes himself and his work in the wake of Chaucer’s influence
and his desire to develop himself as a poet in Chaucer’s mould.28
In the poem’s prologue, Lydgate relates the arrival of Chaucer’s
pilgrims in Canterbury. Lydgate thus depicts the reading practice
of immersion – most familiar to readers today by its deployment
as the primary participatory practice operative in video games
that function through the selection and play of user-chosen, user-
designed avatars – by inserting himself into the frame narrative of
the Canterbury Tales. From Lydgate’s pen then flows the story of
how he joins the pilgrims on their return to London and shares
with them a story about the destruction of Thebes. The destruc-
tion of Thebes offers a further connection to the Canterbury Tales,
for it is an event that takes place before the events addressed in
the Knight’s Tale. Lydgate’s prologue thus follows the sequence
of the frame narrative of the Canterbury Tales, while the story he
relates sequentially precedes Chaucer’s first tale. This juxtaposi-
tion of multiple sequential relations to the *Canterbury Tales* makes reading practice central to the poem in ways that extend beyond how it might represent Lydgate’s presentation of his own reading practice. In specific terms, the poem’s chronological and structural relationships to the *Canterbury Tales* and Lydgate’s own relationship to Chaucer relate directly to the practice of nonlinearity.

Lydgate first elicits nonlinear reading from his audience by crafting a seeming contradiction into the structure of the *Siege of Thebes*: its frame narrative follows the events of the *Canterbury Tales* chronologically by situating its initial action in Canterbury, where Chaucer’s pilgrims encounter the monk John Lydgate at their inn. In contrast, the story told by John Lydgate after joining their company relates events that chronologically precede the actions in the Knight’s Tale. The *Siege of Thebes* can thus be associated with the *Canterbury Tales* in two ways, either linked after it by following the chronology of the frame narrative, or before it by following the chronology of the story of Thebes’ destruction. This juxtaposition that Lydgate presents his readers with is clearly one of textual organization. The multiple organizational possibilities Lydgate crafts position the *Siege of Thebes* as a challenge to reading sequence. Consequently, Lydgate’s use of nonlinearity contrasts with its use in the *Orchard of Syon* and *Titus and Vespasian*. Whereas the *Orchard* relies upon elicited nonlinearity and *Titus and Vespasian* models nonlinear reading, the *Siege of Thebes* exemplifies hybridized nonlinearity. It models nonlinear reading in the way Lydgate juxtaposes and associates his work with the *Canterbury Tales*. It also elicits nonlinear reading, for the dual chronological relationship between the works, that of sequel and prequel, invites readers to choose how to associate and sequence the two. Furthermore, readers’ associations have interpretive consequences for Lydgate’s relationship to and with Chaucer, which Lydgate seeks to further guide in the poem.

The structural relationship of the *Siege* to the *Canterbury Tales* has gained the attention of scholars writing on the poem for the place it holds among Lydgate’s many self-authorization strategies and what it indicates about Lydgate’s aspiration to fame. Lydgate’s decision to compose a work that incorporates such a layered chronological relationship to the *Canterbury Tales* has often been viewed by critics as an aggressive, anxious work of self-fashioning, particularly when set beside Lydgate’s decision not to omit Chaucer from the company of Canterbury pilgrims in the frame narrative of the *Siege*. Specifically addressing the structure
of the Siege’s relationship to the Canterbury Tales, James Simpson describes the Siege as a poem constructed ‘praeposterously’, that is, in a back-to-front order in which ‘events that are recounted later in the fictional time of the newly enlarged Canterbury Tales happen earlier in history’.30 Another critic describes the relationship between the two poems as ‘circular’, for ‘[t]he end is made to join with the beginning’. This circularity reflects Lydgate’s ‘vision of a historical past in which heroes and their civilizations constantly re-enact the ritual of rise and fall upon Fortune’s wheel’.31 Yet more than a parallel to Lydgate’s view of history emerges from how readers could negotiate between the Siege and the Canterbury Tales. While these views treat the relationship between the poems as complex but fixed, in fact that fixity is not a given. A consequence of the organizational relationship between the two texts is that the very multiplicity Lydgate effects creates a space for the exertion of readers’ agency.

The possibility of choice is embedded even in the terms used by modern critics to describe the texts’ relationship: sequel or prequel. These terms reflect a decision Lydgate thus invites readers to make. How should the two texts be linked? What conditions should influence that choice? Here, Lydgate’s careful use of textual organization to prompt choice also turns to guidance, as made evident by considering more fully the work of linking lexia. In digital media, links are crucial tools in staging the expression of readers’ agency, for they request the performance of agency even as they forge predetermined connections. In effect, a hypertext link limits readers’ choices even as it makes possible the appearance and expression of choice through the exercise of nonlinear apprehension. The link goes from one location to one location; a reader can choose to traverse it bidirectionally, but its end points are fixed. As Paul Delany observes of this practice in literary contexts, nonlinearity ‘weakens the boundaries of the text’, and this weakening of boundaries can ‘be thought of as either correcting the artificial isolation of the text from its contexts or as violating one of the chief qualities of the book’.32 Lydgate weakens the boundaries between his text and the Canterbury Tales in order to open a space for reconsidering the texts’ relationships. In the parlance of the previous chapter, applied here to the organization of the text, Lydgate crafts an open network that connects his work to another. In opening the network of the text in this way, and by further relying on nonlinear reading practice, he urges readers to perform comparative interpretation
of his work in relation to Chaucer’s. He also capitalizes on the limitation of choice enabled through the links his chronologies create with the *Canterbury Tales* to enforce a decision focused on sequence. Which view of the text dominates, sequel or prequel, is decided by the choices readers make. The stakes of readers’ choices, however, are not limited to the chronological relationship between the texts.

Lydgate relies on nonlinear practice in writing and reading to, in effect, re-found the Knight’s Tale as part of a Theban tradition which begins with himself, whom Chaucer, though the earlier writer, follows in precedence. In order to achieve this re-foundation, Lydgate must elicit from his readers a reading of the *Canterbury Tales* that does not follow the linear trajectory of literary history. Whereas elicited nonlinearity in a devotional context might respond to the explicit initiation urging readers to make decisions about thematic or spiritual connections between passages, Lydgate elicits nonlinearity in a way that invites readers to determine his literary reputation. By relating the *Siege of Thebes* to the *Canterbury Tales* in a way that provokes readers to determine how to associate the two texts, Lydgate invites them to determine whether he is Chaucer’s follower and successor, or – despite the temporal relationship imposed upon them by chronological history – whether he is someone capable of superseding Chaucer. Lydgate thus treats the choice readers make in associating the *Siege* with the *Canterbury Tales*, whether viewing and reading it secondarily as a sequel, or reading it first as a prelude to Chaucer’s work, as carrying interpretive weight for their view of Lydgate’s reputation. Consequently, nonlinear practice supports Lydgate’s self-authorization strategies. It reflects his perception of readers as able to effect choices regarding textual organization that carry consequences for the presentation and interpretation of the writer’s authority and reputation. This view of the relationship between writer and reader was arguably a fresh development in the late-medieval literary scene. As Deborah McGrady describes this changing relationship between late-medieval writers and readers, writers granted readers authority through a variety of reading strategies in order to promote closer study of their texts, a shift that forged deeper connections between texts and readers. In such a way, ‘the concept of the individual reader promised for [vernacular writers] and their works an aura of authority’.33 Lydgate similarly turns to his readers as a source for granting both his work and himself greater authority.
Having presented his readers with a choice, Lydgate does not rely on them to effect their choice without guidance, however. He thus turns repeatedly to nonlinearity throughout the *Siege of Thebes* to organize, thematize, and comment on workings of chronological history. In doing so, he emphasizes repeatedly that what makes history meaningful is the interpretation people draw from events they associate as meaningful when juxtaposed. That is, history offers a narrative the interpretation of which can be determined by how people – how readers and writers – organize and associate events. Linearity becomes notional, and nonlinearity a practice for shaping historical narrative.

Lydgate furthers this model of history as assembled by readers after the prologue, in the first of the three parts into which he divides the story of the Theban siege, where he moves from relying upon elicited nonlinearity to performing nonlinear reading for his audience. In the first part of the poem, Lydgate relates Thebes’ foundation narratives before moving on to the story of Laius and Eddipus. Part I concludes by detailing Eddipus’ incestuous marriage and his death. Part II shifts focus to Eddipus’ sons, Polymyte and Ethiocles, whose disagreement over the Theban crown leads to strife and Polymyte’s exile. Part III relates the battle between these brothers, their deaths, and Theseus’ arrival and subsequent destruction of Thebes. As becomes evident throughout the *Siege of Thebes*, nonlinearity is at the heart of Lydgate’s view of history. His oft-dismissed didactic moralizations on the events he relates transform them from exemplifications of sinfulness and Theban deceit into passages that provide Lydgate with the occasion for diverting from the narrative of Theban events in order to explore political strengths and weaknesses. These moralizing moments also provide the opportunity for Lydgate to comment on the organization of history. One of the conventional medieval views of history focused on its cyclicity, which operates to repeat, but also to emphasize the linear sequence of events (this happens, then this happens; a man grows in greed, commits sins, falls, and then the sequence repeats with a different person as focus). Lydgate, however, examines how this linear cyclicity can be broken. For example, when Oedipus’ son Eteocles, under the burden of his promise to cede the crown to his brother at the end of a year, rethinks his oath, Lydgate uses the moment as an opportunity to exhort kings to hold to truth and avoid falsity (ll. 1721–5). Lydgate suggests, when he informs his readers that Thebes ‘Distroied was … / For doublenesse of Ethiocles’ (1777–8), that his readers, and kings in particular, are
Nonlinear reading

not bound to repeat this fate but, keeping truth, may avoid it. That is, history is not, in its effects, inevitably circular. Its cycle can be broken, allowing history to advance in a new direction. In fact, what has become history does not have to become the future. What makes the inevitable cyclicality of the future neither inevitable nor cyclical is determined by the choices individuals, like kings and even his readers, can make.

This transformation that Lydgate seeks to effect in the Theban narrative also extends to his and Chaucer’s relationship as poets. Again, as in the structure of the *Siege*, Lydgate relies upon the authority of his readers to determine his reception and reputation. The ability to upend history by making fresh choices effects a change that readers can also apply to how they view his relationship to Chaucer. In order to make this possibility more apparent to his readers, Lydgate turns again to the modelling of nonlinear strategies when discussing the foundation narratives of Thebes. His most pointed modelling of a nonlinear approach to historical chronology emerges when he describes the first foundation of Thebes by Cadmus after Lydgate has already described its second foundation by Amphion. The order of Lydgate’s telling is itself a significant feature. But rather than following Lydgate’s sequence, let us first address the first foundation. For it, Lydgate turns to older authorities as his source:

Some expositours,
Groundyng hem / vpon olde auctours,
Seyn that Cadmvs / the famous olde man,
Ful longe afor / this Cite first began …
With thong out-korve / of a boolys hyde …
To get Inne londe / a ful large space
Wher-vp-on to byld / a dwellyng place (I.293–6, 299, 301–2).

Thus Lydgate summarizes the myth of Thebes’ Cadmean founding, in which Cadmus, in search of his sister Europa, was advised by the Delphic oracle to give up the search and instead follow another cow and found a city upon the place it first rested. Cadmus sowed dragon’s teeth in this ground, and from them warriors sprang up and began attacking each other. It was there, with the help of the fittest survivors, that Cadmus built his city.

Of course, the history of Thebes does not end with its Cadmean foundation. ‘But Cadmus ther hath longe not sojourned’, Lydgate notes before he returns to the story of the exemplary King Amphion. This second foundation, for Lydgate, seems more
meaningful. After the exile of Cadmus led to the ruin of the city’s first foundation, Amphion rebuilt the city ‘With the swetnesse / and melodious soun / And armonye / of his swete song’ (I.202–3). The arts, expressed through Amphion’s playing and song, figure centrally in this second foundation. A few lines later, Lydgate returns to this theme with an extended comparison of the pen versus the sword. The arts, he concludes, provide a stronger foundation for a city than does military might. As Lois Ebin and Lee Patterson remark, this second foundation demonstrates the triumph of Mercury over Mars, words and song over war. For Lydgate, the first poet to refer to rhetoric as artistic ‘illumination’, the second foundation of Thebes is infinitely preferable to the first.

Yet Lydgate is concerned not only with the foundation of Thebes, but also, as the Siege prologue has demonstrated, with the foundation of the English literary scene and his own place in it. In the context of the relationship between the Siege and the Canterbury Tales, the foundational position of arts resonates strongly, while it simultaneously raises the question of whose arts hold precedence. Lydgate’s retelling of the two foundational narratives of Thebes strikingly orders the two events so as to relate Amphion’s later foundation first (lines 200–43) and offer a moralization upon the example Amphion sets for rulers. He then turns to Cadmus (lines 293–315), who loses his crown and gains exile in its stead. Last, Lydgate returns to the example of Amphion (lines 325–8), from whom descends a line of kings including Laius and his infamous son Oedipus. As the audience of the Siege reads these foundation narratives, they learn first of Amphion, then of Cadmus, and then Amphion again. This sequence represents Lydgate’s most prominent use of performed nonlinearity. Lydgate juxtaposes these foundation narratives for his readers in a way that emphasizes how the arts help a kingdom flourish, and how a second foundation can improve upon the first. This juxtaposition also evokes one choice that nonlinear readers could make: beginning to read with Chaucer, turning to Lydgate, then returning to Chaucer. Chaucer, as a sweet singer, might well fit the role of Amphion, and this would be consonant with Lydgate’s respectful treatment of him. Such an interpretation, however, makes no place for Lydgate himself.

Instead, a chronological account offers a stronger parallel for Lydgate’s and Chaucer’s relationship vis-à-vis Cadmus and Amphion: Chaucer, like Cadmus, was a founder and originator – in Chaucer’s case, a founder of the English literary scene. As Cadmus
was credited with introducing the alphabet, so was Chaucer assigned the foundational English literary role. Indeed, Lydgate treats Chaucer thus in the *Siege*, acknowledging his fundamental indebtedness even as he simultaneously builds upon and elides Chaucer’s work. In this way, it is Lydgate who, Amphion-like, expands on the initial foundation with a newer, successful foundation of his own. The sequencing of the two narratives emphasizes the prominence of the second foundation. The Cadmean narrative, which has the potential to unseat Lydgate’s preferred narrative through the authority of greater antiquity, historical precedence, and ‘olde auctors’, becomes subordinated to the second foundation in a way that mirrors the work and the choice presented by the *Siege* as a whole. Chaucer himself is one such ‘expositour’ and a ‘famous olde man’ who may give way to Lydgate even as Cadmus gives way to Amphion.

Notably, even after he introduces the Cadmean narrative, Lydgate continues to insist on the primacy of Amphion’s foundational story. In the broader context of nonlinearity as elicited by the relationship between the *Siege* prologue and the *Canterbury Tales*, this approach of Lydgate’s invites a closer reading of his own relationship to Chaucer. At the same time, by acknowledging the Cadmean narrative and moving directly from the second discussion of Amphion to Laius, Oedipus’ father, Lydgate attempts to close the narrative of Theban foundation so as to prevent his own work from being superseded and replaced. In this way, Lydgate shares something with the writer of *Titus and Vespasian*, who also relies upon performed nonlinearity in order to provoke particular readerly interpretations. Lydgate here provides readers with an example of performed nonlinearity in order to make a point about how they can narrate the story of his and Chaucer’s relationship.

Readers who respond to this suggestion that historical chronology does not have to determine the truth of precedence, that the trajectory of history does not have to be everlastingly subject to linear sequence, suggest a medieval pre-history to Espin Aarseth’s term for digital media nonlinear readers: ‘agents of the text’. Lydgate invites his readers not only to reconcile the *Siege* with the *Canterbury Tales*, but also to become his proxies, his agents, in the struggle to develop and assert his own literary reputation. Through his readers, and through their use of nonlinear practice, Lydgate seeks to re-found the Knight’s Tale as part of a Theban tradition that begins with himself, whom Chaucer, though the earlier writer, follows in precedence. That Lydgate does so through reorganizing...
the foundation narratives, inviting readers to apply a familiar mode of reading, and, by means of that application, agree with Lydgate in shaping his literary reputation, must be acknowledged. The description of Lydgate as a derivative imitator struggling vainly to match or even exceed his literary forefather – still a common perception of the poet even in the wake of recent revisionist scholarship – gains new significance if the Siege is read before the Canterbury Tales. Lydgate seeks to strategize his way to becoming a literary luminary whose work sheds new light upon familiar texts. Chaucer’s greatness supports Lydgate’s own exceptional status as a poet. In such a light, Lydgate assumes precedence over Chaucer, and Chaucer’s works become interpreted through the lens of Lydgate’s didactic morality. Readers engaged in following Lydgate’s suggestions to read not simply his text, but history in a nonlinear way become powerful agents for redefinition of his own authority. Nonlinear reading thus relies on readers’ agency and interpretive authority, even as that agency and authority are crafted in such a way that they become subject to – Lydgate clearly hopes – the writer’s guidance. As with open- and closed-access emendation, nonlinear reading becomes a site for exploring the developing relations between writers who see both themselves and their readers as sources of authority.

Manuscripts and Nonlinearity

Evidence attesting to readers’ performance of nonlinear reading can be difficult to identify, as nonlinearity prompts a reading experience primarily experienced ephemerally through readers’ intellectual associations among texts and selections from texts. Indeed, as the discussion in the previous chapter of how gender intersected with restrictions placed upon corrective reading has shown, that ephemerality may have provided a degree of its attraction to writers of devotional works. For translators like that of the Orchard of Syon, the ephemerality of nonlinear reading provides another way that audiences of women readers could participate with texts and writers, yet leave the work of writing itself in the hands of learned writers, a body predominantly male in its composition.

Yet manuscript evidence can further our understanding of how readers and scribes both understood the nonlinearity of these texts. Such evidence indicates that providing support to nonlinear reading through provision and marking out of textual divisions formed an interest of the scribes copying Titus and Vespasian, and
that Lydgate’s extensive efforts to reformulate his audience’s perception of his reputation and legacy relative to Chaucer achieved only limited, mixed results. Clearly, however, the evidence indicates that audiences responded to the prompt to participate with texts through nonlinear reading in thoughtful ways, though not necessarily with the results the writers tried to elicit.

That readers may have appreciated the nonlinearity of *Titus and Vespasian*, but also found it taxing, perhaps especially for the effort required to determine its connections among the legendary and miracle narratives, is suggested by both manuscripts of *Titus and Vespasian* and *The prose siege of Jerusalem*, a fifteenth-century redaction of *Titus and Vespasian* that excises much of the legendary material surrounding the attack on Jerusalem.37 The life of Christ, with which *Titus and Vespasian* begins, and the death of Judas, with which it ends, are the two most prominent excisions. In this way, the manuscript provides a streamlined narrative with fewer of the episodic juxtapositions that would have made readers work to identify the thematic connections among them. The active work of interpretation required to understand the connections between *Titus and Vespasian*’s episodes here finds a response allowing for more passive, less effortful reader engagement.

Taking a different approach, the scribe of one *Titus and Vespasian* manuscript, Morgan Library MS M.898, provides chapter summaries at the beginnings of episodes. These summaries suggest that the scribe anticipated that readers would find the summaries useful and less laborious than identifying the pertinent developments in plot and themes themselves. Furthermore, the use of summaries indicates that readers might, despite how the writer of *Titus and Vespasian* crafted the work to be read in a linear sequence, be interested in accessing only certain portions of the text at certain times. This approach builds on the writer’s documentation of his own use of nonlinear reading, while at the same time making it easier for readers to approach the episodic elements of the narrative in their own determination of sequence, rather than that provided by the writer. That is, scribes who imposed textual division on the narrative indicate their anticipation that readers might prefer to access the work nonlinearly, and rework the poem by creating an organizational structure to facilitate nonlinear access.

Such reorganization of the text might take different pathways according to how the scribes, in their role of professional readers, interpreted the text. These attitudes towards the work also seem to
have altered over time. For example, the scribes of British Library MS Add. 10036 and Add. 36523, two of the earliest manuscripts of *Titus and Vespasian*, provide no distinctions between episodes, designing textual layouts that consequently facilitate linear reading in accordance with the writer’s organization of the text. Later manuscripts, perhaps responding to fifteenth-century preferences for texts with marked divisions, supply summaries and chapter divisions like those seen in M.898. Such mixed responses to the work’s nonlinearity attests to how the creation of linear narrative from nonlinear reading experiences works rather experimentally in *Titus and Vespasian*. While some scribes recognized the writer’s attempts to represent his nonlinear experience in a linear narrative, others could and did override this by dividing the text in ways that responded to their own perceptions that it should be read nonlinearly, thus facilitating subsequent readers’ nonlinear access to various narrative episodes. In other words, perceptions of a text’s accessibility to linear or nonlinear reading could vary among audiences, and could be shaped and reshaped not only by writers’ efforts and readers’ decisions, but also by the decisions of scribes.

In the case of the *Siege of Thebes*, perhaps the most vivid illustration of the success of Lydgate’s nonlinear reading strategy can be identified in a manuscript that collects it along with selections from the *Canterbury Tales*: Longleat, Warminster, Marquis of Bath MS 257. This manuscript contains the Knight’s Tale, the Clerk’s Tale, and the *Siege of Thebes*, copied in a single hand. Strikingly, the Knight’s Tale and the Clerk’s Tale have been stripped of the prologues that position them within the pilgrimage frame of the *Canterbury Tales*. Only the *Siege of Thebes* retains its prologue, and in Longleat 257, the *Siege of Thebes* comes – strikingly and pointedly – first. This manuscript anthology, which dates to 1457–69, gives evidence for reading choices that privilege the *Siege of Thebes*, attending to the chronology of the Theban narratives rather than the pilgrimage frames. The alternative reading pathway that Lydgate made available to readers through the nonlinear relationship he developed structurally between the *Siege* and the *Canterbury Tales* gains material force in this manuscript. Chaucer has, literally in the arrangement of the texts in this manuscript, become Lydgate’s follower, and the Knight’s Tale and the Clerk’s Tale become incorporated into Lydgate’s own poetic creation and aspirations. Lydgate, a skilled and professional reader who elsewhere shows himself interested in accommodating and instructing his readers in the various ways in which they might
Nonlinear reading

read and interpret his works, in the *Siege* deftly develops a tale that capitalizes on a common reading skill of his readers and, in so doing, accommodates those who came to him first, or in preference, as a means by which he can extend his reputation and authority.

Longleat both demonstrates the existence of one reading path that Lydgate made available to his nonlinear readers, and also demonstrates the agency of readers to arrange such readings according to how they interpreted what they read, whether these are readers such as the scribe responsible for the creation of the manuscript, or the patron who commissioned its development and determined its contents. The Longleat manuscript gives their readings material force through textual collection – for collections not only facilitate nonlinear reading but can, in their creation, derive from nonlinear reading as well. The common perception of the *Siege*, one that dominated in the late Middle Ages as now, is that of a work written as a sequel to the *Canterbury Tales*. Alongside this interpretation of the *Siege* emerge others cast into relief by the text’s reliance upon performed and elicited nonlinearity. Nonlinearity provides readers with the agency and authority to grant primacy to Lydgate’s provision of the foundational Theban narrative that the Knight’s Tale then concludes.

When readers approached the *Siege* in this manner, then the relationship between the *Siege* and the *Canterbury Tales* developed by Lydgate suggests less about failure than it does about success. For these readers, the *Siege of Thebes* and Lydgate pave the way for the more frivolous *Canterbury Tales*, pre-emptively casting Chaucer’s text within a didactic framework that begins with Lydgate’s moral interpretation of the matter of Thebes and ends with the Parson’s sermon. In reflecting this reading order, manuscripts of the *Siege* like Longleat 257, and manuscripts of *Titus and Vespasian* that emphasize or obscure the episodic narrative in ways that promote nonlinear or linear reading make visible not only the variety of ways the texts were used by their original readers, but also contribute to our understanding of the writers’ goals for shaping their perceptions of their readers, the possibilities of their readers’ interpretive strategies, and their own understanding of their authority to make their readers work in these ways.

Assessing the manuscript evidence of nonlinearity further reveals how contingent could be the categorization of scribes. For example, in the context of corrective reading practice, writers’ references to their audiences situate scribes as belonging firmly to the category of readers who need to be encouraged to pay attention
to the details of the text and correct it. In the context of nonlinear reading, scribes move between categories of reader and writer even as they resist categorization. That is, in Lydgate’s case, scribes once again become implicated among his diffuse conception of a broad reading public. In other cases such as that of the Orchard of Syon, which is directed specifically to an audience of nuns, or in that of Titus and Vespasian whose scribes impose dramatically distinct modes of organization upon the text, scribes adopt a more interventionist role in shaping reception of the text. In fact, how scribes of Titus and Vespasian impose organizational schema upon the text in ways that facilitate readers’ nonlinear engagement with the work suggests that these scribes adopted a much more authorial role in guiding and shaping the audiences’ reading experiences. Consequently, assessing nonlinear practice provides further ways by which the work and status of scribes may be evaluated.

Conclusion

Studying the use of nonlinearity in the Orchard of Syon, the Siege of Thebes, and Titus and Vespasian enables examination of how a culture grappling with strategies for negotiating the sequence of texts in manuscripts gave rise to works that reflected, anticipated, shaped, and promoted the choices of their writers and readers. The Orchard showcases the agency of readers, who are anticipated as able to effect meaningful choices about the text and its relationship to their spiritual state. The Siege of Thebes provides a fascinating study of one author’s expectations about his vernacular audience’s ability to determine relationships between texts and what that ability signifies for his developing reputation as a writer. Titus and Vespasian offers a compelling glimpse into how a single writer, reflecting his own nonlinear reading practices, developed a text that models that reading practice in order to enhance the work’s devotional interpretations.

The Siege of Thebes and Titus and Vespasian represent works for which the authority of readers is both crucial and yet also constrained, exemplifying tension between freedom and control that scholarship on contemporary nonlinear media helps distinguish. In these and other works, readers’ choices are often presented as conditional, limited to the options authorized by a text. The Orchard, for example, focuses on the choices readers could make as they negotiate within the text, yoking those choices to specific goals and attitudes and, additionally, excluding from its attention
how readers might also bring external texts to bear. In Elizabeth Schirmer’s observation, this facilitation and restriction of readers’ choices creates a tension ‘between empowering ... readers and containing and controlling their readerly agency’.41 Such a tension can be seen in *Titus and Vespasian* as well, which manages readers’ authority by juxtaposing lives and events in order to provoke devotional interpretation of the text and consequently enhancing its own authority. Yet, as Lydgate’s treatment of nonlinearity in the *Siege of Thebes* vividly demonstrates, such sophisticated reading practices were not restricted to religious texts and audiences alone. Pursuing the secular audience interested in Chaucer’s *Canterbury Tales*, the *Siege* capitalizes on a growing thirst for participation amongst readers and uses readers’ authority to shape a writer’s authority. Lydgate relies on elicited nonlinearity to provide readers with a choice about how to relate his text to Chaucer’s, then performs a nonlinear reading of history to suggest how that decision could be resolved in a way that heightens his own authority and reputation.

These texts’ reliance upon and development of a discourse of participatory reading focused on nonlinear reading practices furthermore recalls John Dagenais’s comment that ‘Reading, not writing, was the dominant literary mode in the Middle Ages’.42 The possibilities of nonlinear reading shape the structural and thematic concerns of all three works. The translator of the *Orcherd* frames the dialogues of Catherine of Siena with a metaphor of the reading process designed to elicit a particular mode of interpreting and negotiating among sections of the text that generates affective responses. By turning to nonlinearity, the writer of *Titus and Vespasian* imposes a familiar mode of devotional, affective interpretation upon his readers to elicit their participation through thematic analysis.43 Through such applications, the uses of nonlinearity in the *Orcherd* and *Titus and Vespasian* provide evidence for what has been described as a ‘steadily growing level of confidence and sophistication in the composition, production, circulation, and consumption’ of vernacular religious texts.44

As Lydgate’s *Siege of Thebes* demonstrates, however, reliance upon this sophisticated reading practice for the composition, circulation, and consumption of texts cannot be restricted to the devotional alone. In the *Siege*, Lydgate makes use of nonlinearity by applying it to the construction of his literary reputation, in a manner that also intersects with traditions for assembling manuscript anthologies and miscellanea. In this way, Lydgate also
Participatory reading in late-medieval England anticipates the print-era role of editors as collaborators in developing and publicizing texts as he relies on nonlinearity to encourage readers to become his literary agents. Nonlinear reading, for Lydgate, becomes a mode of self-promotion.

While Lydgate’s strategy differs from that of the translator of the Orchard and the writer of Titus and Vespasian, all of the writers deploy nonlinearity to achieve specific goals for their texts through a tensely negotiated, limited reliance upon readers’ agency. Yet, even as Elizabeth Schirmer attributes this tension to the ‘textual culture of Syon Abbey’ and ‘a moment of crisis in Middle English textual culture, sparked by the controversy over the Lollard heresy’, the shared presence of nonlinear practices in Titus and Vespasian and the Siege of Thebes, works neither associated with Syon Abbey nor exclusively religious in their audiences, points to the broader reach and influence of nonlinearity, even as it also suggests a deeper understanding of the practices and pressures shaping English textual culture. In this light, these three texts can be seen as pointing to late Middle English writers’ recognition of the potential vernacular readers possessed for understanding, practising, and becoming skillful with sophisticated reading practices. Furthermore, the reliance these writers placed on their late-medieval readers, particularly in ways that disregard the work of scribes, shows how such readers’ authority and agency became framed as crucial to the success of the writers’ goals.

In addition, how the translator of the Orchard, Lydgate, and the poet of Titus and Vespasian negotiated between granting readers’ agency and controlling the extent of that agency, evidences the historical contingency that attends medieval uses of nonlinearity. At the same time, however, medieval uses of nonlinearity provide a bridge for understanding its emergence in media today. As developed here, the subcategories of nonlinearity, performed and elicited, could be applied to forms of digital media in order to distinguish better how nonlinearity today continues to be a powerful mechanism for controlling readers. They can also refine our understanding of the applications, aesthetics, and strategies that applied to medieval uses of nonlinearity. Such aesthetics point to how writers used reading practices not only in the formation of their own writing, but to create connections with other works, which they could then present in their own works in ways that raised or lowered the boundaries between texts. Such efforts reflect the establishment of literary networks, within and between works. At the same time, readers could ignore these boundaries, reorgan-
ize the relations of texts in a network, and even establish their own networks through associations they recognize between the present text and prior reading. Reflecting on the slipperiness of nonlinear practice in this way highlights the queerness of readers through the heterogeneity of their practices, the ease of their resistance to the imposition of organizational norms, and even the way that scribes and writers tensely negotiate or complicate those norms. In such a context, reading evokes a queer potential. The attempt to discredit and condemn nonlinear reading in the 1549 *Book of common prayer* highlights the contentious, dangerous nature of what queer reading can do to the body of the book; through nonlinear practice, the book and reading practice both become perceived as ‘broken’. Yet that potential for disruption also provided medieval writers with ways to mend relations between readers and texts, crafting a practice that facilitated the savoury consumption of texts.

As we attend to the ‘medieval literacy industry’, the insights of digital media criticism offer a framework useful for reconsidering the medieval pre-history of today’s digital media practices, particularly the function of nonlinear reading in the late Middle Ages. Attending not only to the manuscripts that provide material evidence for medieval reading, but also to the literary works that provide their own evidence for reading practices, and to the broader cultural practices that reflect and influence the same, helps pave the way for a more nuanced, informed understanding of medieval literary culture, the forces that shaped the texts we still read today, and the tools available to writers and readers alike.

Notes

3 Despite this early rejection of discontinuous reading, Matthew Brown notes that devotional works in early modern England continued to rely upon and advocate nonlinear reading to their audiences (‘The thick style: steady sellers, textual aesthetics, and early modern devotional reading’, *PMLA* 121:1 [2006], 67–86). For a religion that relies upon continued assessment of the New versus Old Testaments, and whose central redemptive narrative is repeated across four Gospels, habitual linear reading provides a continual challenge.
Scholars of nineteenth-century literature connect these issues particularly to the novel. For example, J. Hills Miller writes that ‘The linearity of the written or printed book is a puissant support of logocentrism. The writer … sits at a desk and spins out on the page a long thread or filament of ink. Word follows word from the beginning to the end. The manuscript is set for printing in the same way, whether letter by letter, by linotype, or from tape by computer. The reader follows, or is supposed to follow, the text in the same way, reading word by word and line by line from beginning to the end’, in *Ariadne’s thread: story lines* (New Haven and London: Yale University Press, 1992), 5. Miller suggests that, just as writing a novel produces a linear narrative, and the materiality of the work is linear, so too reading follows linearly. Yet, while this may be true for some novels, these are not ontological truths of the codex as a media form, as I discuss here. These qualities are instead influenced by the organization of a particular literary form. Similarly, Jeffrey Knight argues that textual composition is related to the materiality of printing only through the choices made by writers to respond to the material form of printing, in *Bound to read: compilations, collections, and the making of Renaissance literature* (Philadelphia: University of Pennsylvania Press, 2013).

8 Phyllis Hodgson and Gabriel M. Liegey, eds, *The Orchard of Syon*, Early English Text Society original series 258 (London: Oxford University Press, 1966), at 1. Subsequent quotations will be from this edition. In modern English, this passage might be translated as, ‘Therefore, religious sisters, I encourage you to disport yourselves in this spiritual orchard at reasonably set times, and walk about with your mind and reason where you wish, in what alley you like. Specifically, savour there as best you be disposed. You must choose as you like where you will walk among thirty-five alleys – that is to say, thirty-five chapters – one time in one, another time in another’. The *Orchard* has received much scholarly attention in recent decades for its importance in representing women’s devotional and reading practices in the community of nuns at Syon. For discussions of the *Orchard* and its readers, see Denise Despres’s ‘Ecstatic reading and missionary mysticism: The Orchard of Syon’, in *Prophets abroad: the reception of continental holy

9 See Appendix B for examples of other instructions on nonlinear reading. For discussions on how nonlinearity is used to promote affective interpretation, see Sarah Noonan, ‘“Bycause the redyng shold not turne hem to enoye”: reading, selectivity, and pietatis affectum in late medieval England’, New Medieval Literatures 15 (2013), 225–54; and, more generally, Mark Amsler, ‘Affective literacy: gestures of reading in the later Middle Ages’, Essays in medieval studies 18 (2001), 83–110, and Affective literacies: writing and multilingualism in the late Middle Ages (Turnhout: Brepols, 2011).

12 Riverside Chaucer, I.3177.

17 Aarseth, *Cybertext*, 79, 95.

20 As Jessica Brantley notes, such considerations of page layout and design support nonlinear reading of the page itself, as the eye moves not from first word to last in linear sequence, but from heading to text to gloss and decorative capital (*Reading in the wilderness*, 94). Particular sequences can be encouraged by the relative size of different visual elements on the page, as well as the colours used, but the performance of nonlinearity still remains up to the reader.

22 On the subject of collative reading, see Brown, ‘Undisciplined reading’. Another parallel might be drawn to the works of Marie de France, who refers to her work of composition using the term ‘assembler’, to assemble, in the prologue to the *Lais*. As such, the text does not require the interpretive effort of assemblage in the way that the *Orchard* does, this labour having been accomplished already by the writer.

23 J. A. Herbert, ed., *Titus and Vespasian or, the destruction of Jerusalem* (London: Roxburghe Club, 1905), lines 7–11. Subsequent quotes are also drawn from this edition.

24 For instance, in her chapter comparing *The Siege of Jerusalem* with *Titus and Vespasian* in *The Siege of Jerusalem in its physical, literary, and historical contexts* (Dublin and Portland, OR: Four Courts Press, 2000), Bonnie Millar dismisses *Titus and Vespasian* as incoherent
because of its narrative additions and divagations (124–5), and even the poem’s editor declares that ‘For the sake of brevity I have frequently alluded to the present metrical composition as a poem, but the justice of Dr. Brandl’s description of it as “void of artistic composition” cannot be gainsaid’ (Herbert, Titus, xliv).

27 Riverside Chaucer, I.3177. Implicit in this suggestion that readers turn the leaf to avoid the tale is the expectation that – without such prompting – readers will negotiate the work linearly, and certainly the number of spurious links and additional tales added to fifteenth- and sixteenth-century manuscripts and printed texts of the Canterbury Tales suggest a desire, not simply for a completed work, but one that could be read linearly, without fragmentation or breaks between beginning and end.

29 On Lydgate’s strategies for authorization and self-fashioning, see John Meyer-Lee, Poets and power from Chaucer to Wyatt (Cambridge: Cambridge University Press, 2007); John M. Bowers, Chaucer and Langland: the antagonizing tradition (South Bend, IN: University of Notre Dame Press, 2007), especially at 18; Thomas Augustine Prendergast, Chaucer’s dead body: from corpse to corpus (New York: Routledge, 2004). As Meyer-Lee puts it, Lydgate enters the Siege of Thebes ‘to bestow upon it the authority he possesses outside of it. The agon with Chaucer that he states throughout his imitation of the Canterbury Tales … aims not so much to depict himself as an authentic disciple and heir as to transform Chaucer into a flesh-and-blood laureate who retroactively defines the role that Lydgate implicitly claims to occupy’ (39–40). See Meyer-Lee, ‘Lydgate’s laureate pose’, in John Lydgate: poetry, culture, and Lancastrian England, ed. Larry Scanlon and James Simpson (South Bend, IN: University of Notre Dame Press, 2006), 36–60.

Part II
Evoking participation
Reading materially:  
John Lydgate’s ‘Soteltes for the coronation banquet of Henry VI’

Allone as I went vp and doun,  
I ane abbay wes fair to se,  
Thinkand quhat consolatioun  
Wes best in to aduersitie,  
On cais I kest on syd myne e  
And saw this writtin vpoun a wall:  
‘Off quhat estait, man, that thow be,  
Obey and thank thi God off all’.

Robert Henryson, ‘Abbey Walk’¹

Like other texts addressed in these chapters, the short lyric poem ‘Abbey Walk’, by the late fifteenth-century Scots poet Robert Henryson, engages the work of reading in ways that facilitate and even necessitate reader participation. A poem concerned with man’s awareness of God’s mercy, ‘Abbey Walk’ introduces a simple refrain at the end of each of its stanzas: ‘Obey and thank thi God off all’. The poem gains its modern title from its first few lines, in which Henryson describes an occasion when, solitary and struggling to address life’s adversities, the narrator of the poem goes out walking and unexpectedly sees a hymn written upon a wall. This positioning suggests an external origin for the hymn: rather than simply a composition of Henryson’s, it can be viewed as a lesson the narrator must learn from an external source, one that surmounts his own troubled state. The source of the hymn as located on the abbey wall is repeatedly referenced by the narrator throughout the remainder of the poem. Provided by the stones in a place desolate of any human presence but the reader’s, addressing humanity’s transitory possession of royalty, goods, and gold, the hymn offers a text illustrative of the natural order of the world, one that connects that natural order to reading by the transmission of the hymn by means of natural objects, the stones of the wall.
‘Abbey Walk’ thus represents reading that emerges from the representation of an overlooked category of medieval textual media that I call ‘extracodexical’. An extracodexical text is a written work that circulates outside the boundaries of the familiar codex, whether manuscript or print book. Heraldry, dishes, walls, tapestries, and embroidered or woven textiles and other objects are common surfaces for medieval extracodexical texts, which can also take the form of various charms and talismans. These and other examples invite scrutiny about how participatory reading practices emerge from interactions with such extracodexical texts. In addition to emendation and nonlinear apprehension, two primary and widespread modes of participatory reading reliant upon the written codex format, what modes of apprehension might be identified in participation with texts outside the codex? What experiences might contribute to shaping participatory reading in circumstances where texts are inscribed on objects people wear, dine from, walk around, or consume?

This chapter explores how extracodexical texts can illuminate participatory reading practices that emerge from works in and outside of manuscript contexts. In doing so it paves the way for subsequent analysis of other examples of extracodexical texts and their impact on participatory reading practice in the following chapter. Considering texts outside the boundaries of manuscripts as belonging to a shared category invites evaluation both of their parallels with each other, and also evaluation of how they differ from works in manuscript contexts. It is not simply that books mattered in the later Middle Ages: it is that texts mattered, and mattered in and across a variety of media. In other words, attending to extracodexical texts enables a de-centring of the book format in manuscript and print, and facilitates attention to and engagement with the variety of forms that medieval literary texts could assume. Furthermore, some texts can evoke extracodexicality by, in a manuscript context, relating or describing or otherwise circulating texts that were, in their original context, extracodexical. The movement of extracodexical texts into (and out of) manuscript contexts thus invites further evaluation of what is gained and what is transformed or obscured or multiplied by the changing medium of transmission. In these ways, assessing the roles played by extracodexical texts enables the effects of a particular medium – whether manuscript or other – to be explored with greater nuance.

Critical to extracodexical texts is the role played by their materiality, for it is the material difference of medium that defines them
as a group. In ‘Abbey Walk’, the hymn engages the reader through several communicative modes predicated upon its materiality, its stone vehicle. The stone does not have pages that can be turned; it does not have rubrication or drawn margins or drawn lineation, typical hallmarks of books that shaped readers’ literate practices. It cannot be apprehended non-linearly, nor can it be emended with any degree of casualness. Nor can it easily be manipulated; the reader must concede to its location and permanency and approach it. Its extracodexical form requires or disallows certain behaviours and practices by readers. Yet the stone, durable and natural as it might seem, nevertheless requires the presence of a reader to engage it and make its meaning manifest. Without the presence of the narrator as reader before the wall, a presence that that allows him to apprehend the poem, it would not exist as a hymn to be represented by the poet. Without the wall, the narrator as reader would have to learn the lesson offered by the abbey wall text in a less visceral way. Crucially, the encounter between the narrator-reader and the poem on the wall – preserved in a manuscript text – serves to illuminate how reading shaped and was shaped by the materiality of the extracodexical text.

Materiality and extracodexical texts

Accordingly, this chapter focuses on participatory reading as understood through the critical framework of materiality. Materiality has flourished in medieval studies in recent decades, influenced by new materialisms and especially object-oriented ontology, which provides a framework for understanding the independent agency of things. Object-oriented ontology and speculative realism provide the means to approach medieval historicity outside and around the perspective of the human, and have usefully intersected with ecocritical studies to generate ecomaterialist analyses that consider the agency of, for example, water or fire. Yet the materiality of objects that evoked or necessitated human participation can be assessed in ways that extend beyond the ontological focus. In particular, recent developments in the study of materiality in digital contexts offer approaches of use to the study of premodern, medieval materiality. Joanna Drucker, N. Katherine Hayles, and Matthew Kirschenbaum have been the leading voices discussing how to assess the materiality of digital media. In their approaches, they expand upon the understanding of materiality developed through the work of phenomenologists
and gender theorists such as Maurice Merleau-Ponty and Judith Butler. The approaches of digital materiality studies also help to illuminate ways of thinking about medieval textual experience beyond that of the pages of a manuscript, which has dominated critical perspectives of literary materiality particularly in the wake of heightened consideration of the ‘manuscript matrix’, which ‘involves cognitive perception as two kinds of literacy: reading text and interpreting visual signs’. In counterpoint, Michael Camille asserts that attending to the manuscript involves more than confronting medieval reliance upon both word and image; it also requires assessing the sensory experiences manifested through the tactility of parchment. Yet, as critics studying the materiality of digital media have shown, details like these that represent the ‘forensic materiality’ of works are only one among a number of ways that materiality constitutes meaning.

Forensic materiality contrasts with ‘formal’ materialities in assessing digital media, according to Matthew Kirschenbaum. Forensic materialities are those physical properties of a media’s form, familiar to medieval studies as the ‘manuscript matrix’ to which New Philology directed such attention, and the sensation of the parchment page that Camille discusses. In contrast, formal materiality emphasizes the ‘imposition’ of multiple states on an object, which Kirschenbaum applies in particular to data or digital objects. For example, the use of a text editor to delete symbols on the page of a digital document represents a formal materiality of deletion. Ensuring that the data is also deleted from the hard drive engages in forensic materiality. In a manuscript context, the erasure of a word or page can be an act of formal materiality; it is not necessarily also an act of forensic erasure, as contemporary technologies such as those applied to palimpsests can be used to recover traces of the original writing. Just as one example of how this might relate to studies of medieval manuscripts, even current materialist focuses tend to miss the layer of the forensic when attending to their materiality: such analyses see the ‘words and not the ink with which they were written’, as Tim Ingold asserts. Against a ‘poetics of parchment’ and its corresponding material investigations, medievalists might also wish to investigate the ‘poetics of ink’. Certainly, medieval writers distinguish between the qualities of red and black ink, for instance, which they respectively treat as representing the blood of Christ and the nails that pinned him to the cross. This association between nails and black ink might be extended further still if referring to ink written
evocatively with the highly acid ink made from oak galls, bitter and biting in its nature.

Such distinctions between forensic and formal materiality can also be represented in the literary imaginary. For Henryson’s abbey wall, the forensic materiality would be that of stone, whereas the formal emerges in the relation between the materiality of the text and the apprehension of the narrator-reader as discussed above. Similarly interested in what Kirshenbaum would term the forensic materialities of a work, N. Katherine Hayles evaluates how the material instantiation of a work, particularly in digital media, represents the convergence of communicative modes once viewed as medium-specific, such as moving images united with audio and text.7

This convergence of communicative modes evoked through encounters with materiality resonates strongly with medieval media, both in manuscript and outside it, where orality, imagery, text, and other modes may intersect and mutually affect each other, even as the emphasis on forensic materiality also invites consideration of the effects and types of formal materiality. It is these that engage Joanna Drucker, who offers the concept of ‘performative materialities’ to consider how ‘the cognitive capacities of the reader make the work through an encounter’ that ‘is always situated within historical and cultural circumstances and expresses ideology at every level of production, consumption, implementation, and design’. For Drucker, works cue readers’ engagement and the performance of materiality, and such materiality is always historically and culturally dependent. Materiality is not inherent in the form, but emerges through participation with readers as acts of interpretation.8 The materiality of Henryson’s hymn on the abbey wall develops not through any essential properties consistently conveyed by the stone wall, but through the narrator-reader’s apprehension of and participation with the stone-transmitted hymn.

In examining how materiality evokes participatory reading, this chapter marks a further turning point in relation to the studies of previous chapters. Whereas assessing corrective and nonlinear reading focused initially on the articulation of these practices by writers, in this and subsequent chapters the reading practices attended to are not the focus of instruction provided by medieval writers. Instead, particularly in the practice of material reading, participation manifests through the interpretive work initiated by how the texts function to create meaning.9 Accordingly, further consideration of how materiality shapes reading through its
Participatory reading in late-medieval England

production in participation with the reader becomes a necessity, as evidenced by how the stones of Henryson’s ‘Abbey Walk’ required the participation – even the performance – of a reader to make their hymn manifest.

Performativity in the context of medieval literature has gained increasing attention in the work of Robert Clark and Pamela Sheingorn, and through Jessica Brantley’s work on British Library manuscript Additional 37049, a Carthusian miscellany. Brantley situates her analysis particularly in the context of and response to the effects of the texts and images that stimulate performative devotional reading of the manuscript’s diverse collection of texts.10 Performative reading is not produced by the text alone, as Brantley observes; it can be evoked by a wide range of literary genres, such as plays to paternosters. Yet the alignment of reading with performance, while it effectively highlights how reading and performing in the later Middle Ages could often overlap, can potentially overlook aspects of a work not traditionally considered performative, but which can certainly be a practice of participation and interaction – such as walking and even sitting, both practices discussed below. Focusing on the role of materiality in the context of participatory reading in manuscript also invites, as mentioned above, consideration of how different types of materialities shape participatory reading. Exploring how participatory reading can be elicited particularly through materiality, in a way that explores materiality’s engagement with extracodexical texts, is the project of this chapter.

Consequently, this chapter facilitates the study of extracodexical texts, arguing that considering the materiality of texts emphasizes how medieval reading functions as embodied practice. That is, reading materially involves bodily, materially mediated modes of experience. These modes of experience not only include word and image and touch, but also sound, place, movement, gesture, and the material properties of texts often neglected as under- or un-literary. One such under-literary, materially dependent text is that of the ‘Soteltes for the coronation banquet of Henry VI’, composed for the 1432 coronation banquet by John Lydgate; this work will be the focus of the present chapter. Lydgate’s work has been the subject of reinvigorated assessment of materiality in medieval literary culture.11 Such materiality is central to the ‘Soteltes’, as the verses accompanied possibly edible, decorative dishes that concluded each course of the coronation banquet. Examining the verses and the materially dependent, embodied reading experiences
they occasion will illuminate the role of participatory materiality in the work of reading and pave the way for the tighter focuses on movement, architecture, and time in the following chapters.

Lydgate’s ‘Soteltes’ as materially situated extracodexical texts

The verses of Lydgate’s ‘Soteltes’ poem take their name from their original material context. Subtleties were decorative or sometimes edible tableaux presented as the culmination of a course or as the high point of an entire feast. While the shape, subject matter, and scale of subtleties could vary, they aspired to grand display and often evoked symbolism pertinent to the occasion of the feast at which they were served. For example, when the Holy Roman Emperor Sigismund visited Henry V just after the feast of St George in 1416 and was inducted into the Order of the Garter, three subtleties were served at the celebratory feast that followed. These works depicted a lady arming St George, St George fighting a dragon, and a castle with St George and the king’s daughter leading a lamb: fitting images for such an occasion. The subject matter of the subtleties evoked the patron of the order and of England itself, and reflected chivalric values important to the order, such as martial prowess and courtly behaviour, that Henry V sought to have the order embody. Whereas these tableaux focused on their imagery for meaning, Lydgate’s ‘Soteltes’ exemplify a work that, in its manuscript survival, points to its materially conditioned original state. Accordingly, the kind of participatory materiality that shaped the reading of the ‘Soteltes’ at the coronation banquet provides a case study through which the role of materially contextualized reading can be assessed. Doing so shows how reading the ‘Soteltes’ could produce a particularly affective reading experience that relies on the readers’ bodies to fashion and emphasize display of the new king’s power and authority.

While the text in its manuscript survivals could be considered only as possessing the formal materiality of the manuscript matrix – its paper or parchment, its ink, and so forth – the representation of the ‘Soteltes’ in several of the manuscripts nevertheless includes details evocative of the work’s prior materiality. First should be considered the textuality of the ‘Soteltes’ that make them readable, rather than wholly theatrical performances as discussed by Sponsler. In the manuscript context provided to the verses in London, British Library MS Cotton Julius B.i, each object constituting the subtleties is described as ‘with this scripture suying’, or
‘with this resoun’, and ‘with this reason folowyng’. This emphasizes the provision of verses in writing, as scripture, and through reasons, as mottoes, sentences, or verses. These descriptions attest to how the ‘Soteltes’ almost certainly offered their verses in a textual format. The textuality of subtleties accompanied by words is made even more explicit in records of the coronation feast of Henry VI’s mother, Catherine of Valois. Her coronation in the same place as Henry VI’s preceded it by the slim margin of ten years. Following each course of her coronation banquet subtleties were served, displaying motifs of St Katherine of Alexandria. The first subtlety consists of two tableaux, one with a pelican and other birds, and the other of Saint Katherine holding a wheel in one hand. A ‘Reason [is] in hir [other] hande, Madame le Roigne’, explains a London chronicle. To this the pelican responds, ‘Cest enseigne’ and the birds, ‘Est du roy pur tenir joie. A tout gent il met sentient’. (‘This is a sign / It is for the king to take joy / For all the people he makes [it] known’. Here, the reason accompanying the subtlety is clearly provided as written text.

The banqueting context proves significant to the manuscript witnesses as well, which reflect a continued interest in the original banqueting context of the verses, such as exemplified by the introduction to Lydgate’s first verse for these coronation subtleties in London, British Library Cotton Julius B.i.:

This was the first cours at his coronacion, that is to say, first, ffurmentie with venyson. Viande Royal plantid with losenges of golde. Borehedes in castelles of earmed with golde. Beef. Moton. Signet. Capon stued. Heron. Grete pike. A redde lech with lions corven theryn of white. Custade Rooial with a leparde of golde sittyn g theryn. Fritour like a sonne with a flour de lice therynne. A sotelte, Seint Edward and Seint Lowes armed in cote armours bryngyng yn bitwene hem the Kyng in his cote armour. (623)

Immediately following this introduction is given the verse of the first subtlety, introduced by explaining that it is provided ‘with this scripture suying’. By situating the verses within the order and provision of food in a banquet, the subtleties become contextualized by the spectacle and consumption of the banquet itself. Roger Epstein, in writing on the textual nature of the subtleties, refers to their presentation of the text in a public banqueting event as effecting ‘spectacular textuality’. The manuscript witnesses emphasize the combination of the subtleties’ textual as well as visual elements, couching both in the framework of the banqueting display. As
the hymn in ‘Abbey Walk’ functioned as an extracodexical text with which the reader-narrator interacted, the subtleties can be recognized as extracodexical texts integrated into the banquet, demonstrating the grounds of a reading practice dependent upon both forensic and formal materiality.

Formal materiality and the ‘Soteltes’

Although the forensic materiality of Lydgate’s subtleties is unknown, late-medieval subtleties could be fashioned from consumable items, such as bread or sugar, or from non-consumable items that might require the labours of craftspeople, including painters, carpenters, and metalworkers, to devise. Despite the insufficiency of current evidence to indicate the formal materiality of Lydgate’s subtleties, the material possibilities would nevertheless have evoked different interpretations for the original audience. They thus deserve brief address in that context, for their forensic materiality shaped how the subtleties’ formal materiality conveyed meaning to readers. Subtleties could encompass a range of forms and materials; the less sculptural ones might be made from as simple a material as ground meat. An example of this style of subtlety is provided in descriptions of the coronation feast of Catherine of Valois, Henry VI’s mother. At her banquet, the subtlety for the third course was made from a ‘mete in paste with iiiij aungels in fourme of Sent Katerine whele in the myddes with a Reason’. The meat has simply been moulded into the shape of a Catherine wheel, either supported or being broken by angels; such a subtlety was clearly designed for consumption as well as admiration and reading. Lydgate’s subtleties, along with the subtleties for the first two courses of the coronation of Queen Catherine, are more sculptural and thus required materials more suited for the purpose. Bread is a possibility, as is sugar, as are non-consumable materials. Given the details of Lydgate’s subtleties, the likelihood of non-consumable materials having provided the support for the subtleties is strong. The probability of the use of some if not entirely non-consumable items may also be suggested by details of the subtleties’ descriptions, such as the note that Edward and Louis are ‘armed in cote armours’, Emperor Sigismund and Henry V are ‘armed’ and both wear ‘mantelles of the garters’, suggesting that the heraldic armour and mantels may have been separate items, the armour perhaps even crafted by metalworkers. Yet if made of consumable items, the cultural background and figurative
connotations of the foodstuffs would affect interpretation: if made from sugar, for example, the expense and foreign origin of sugar would have – as the banqueting dishes did themselves – attested further to the king’s might and wealth.\textsuperscript{21} Bread could have been viewed as attesting to the king’s ability to support and nourish his people. The forensic materiality would, consequently, have added to the formal materiality of the subtleties, based on the participants’ understanding of the figurative implications of the subtleties’ material supports. Yet in the manuscript witnesses’ silence on the details of the subtleties’ material, the one aspect of formal materiality that we can point to is the presence of the textual ‘scripture’, even as we can only speculate about the specific details of its formal materiality (was it written with edible vegetable inks? On an edible or nonedible vehicle?).

The description of the subtleties in the manuscript witnesses, in their absent commentary on the subtleties’ formal materiality beyond the presence of the textual ‘scriptures’, asserts the primacy instead of formal materiality. The manuscript witnesses’ descriptions demonstrate how – perhaps regardless of the subtleties’ formal materialities – the material context of the subtleties nevertheless shaped their formal materiality. First, the convergence of the subtlety with the feast dishes indicates that each subtlety and its verse function as figurative consumables, their messages internalized in the bodies of the banquet audience.\textsuperscript{22} Understanding the text in this way demonstrates how cuisine functions as a materiality affecting the work’s apprehension. The verses become works to be savoured virtually, if not also literally, and in that savouring their ideology is taken in by the reader through the vehicle of consumption, a bodily practice. Participatory materiality thus shapes a reading of the ‘Soteltes’ that is both affective and visceral. Second, linkage of the ‘Soteltes’ to food also evokes the medieval practice of \textit{meditatio} in the reception of the subtleties. Through \textit{meditatio}, ‘reading is memorized and changed into personal experience’, a practice that Mary Carruthers notes that Jerome links to consumption. Jerome argues that ‘Consumption of the book is the foundation of reading and the basis of history. When … we store away the book of the Lord in our memorial treasury, our belly is filled spiritually and our guts are satisfied’.\textsuperscript{23} Reading functions as an act of consumption that alters the formal materiality of the reader’s own body. By imbricating consumption with the ‘Soteltes’ objects and verses, the subtleties themselves become works that readers internalize, forming the sacral yet secular foundation of the
new history brought forth by the coronation of a new king. Third, beliefs about medieval food practice connected consumption to changes worked upon the body of the person eating. Even virtual consumption of the subtleties thus construct the bodies of readers as supporters of the Lancastrian ideology promoted by the subtleties. In this way, the formal materiality of cuisine contributes to the reading of the subtleties through the process of figurative and possibly even literal consumption.

As an aspect of the subtleties’ formal materiality, the physical conditions of the Great Hall at Westminster as the place of the banquet also invite consideration for how they could shape participatory reading of the ‘Soteltes’. As the manuscript matrix provides a textual and material context for texts transmitted in codices, extracodexical texts enjoy as their ‘matrix’ not only the materiality of their own physical form, but the context in which they can be situated, through which they act, or in which they were transmitted through readers. For the ‘Soteltes’, their matrix extends to the Great Hall at Westminster as a socially significant place in which they were presented and read. While the relationship between architecture and readers will be explored at greater length in the following chapter, it is key here to address how the physical, material surroundings of an extracodexical text could impact its reading. Spaces are not only physical settings, but also become – through the human valuation and articulation of space – transformed into culturally constructed places that convey meaning and shape identity.24 Space influences reading in physical ways, and place contributes to the meaning and practice of reading within a space.

The Great Hall of Westminster Palace, rebuilt only three decades prior at the instigation of Richard II, provided the traditional space for coronation banquets. As not just a space but also a place, it drew on religious traditions as well as spatial status to establish its social meaning. At the time of Henry VI’s coronation, it was the largest hall of its size in Europe. Borrowing extensively from sacral architecture, the hall measured an immense 240 by 68 feet, and was able to host thousands for coronation feasts.25 Merchant stalls and shops typically lined the Great Hall during legal term-times, but for Henry VI’s coronation event, these additions were swept away and the bare masonry was covered with decorative hangings, perhaps some of the Flemish tapestries collected by Richard II or, for a more unified look, decorative woollen hangings similar to those used for the coronation of Edward III in 1327.
The hall thus functioned as a grand, imposing, and extensive place that emphasized the authority of the king. The arrangement of furniture for the feast stressed this point still further, for Henry VI sat behind the centre of a table on a raised dais located before the south wall, opposite the main ceremonial entrance to the north. Polychrome stone statues of England’s kings occupied niches flanking the lofty south window above the dais, reinforcing the assertion of power and grandeur offered to Henry VI in his central, elevated seat. To either side of Henry sat some of the more illustrious members of the nobility. Perpendicular to this table, along the length of the Great Hall, were arrayed other tables in two long rows.

The scope of the hall materially influenced the subtleties themselves, and attendees’ participatory reading of the subtleties. Few objects could be large enough that all those assembled at the coronation could read them. The issue of size relative to the physical space of the hall consequently indicates that those seated by the king, along with the king himself, to whom the subtleties would have been served, would have been their most intimate readers. In contrast, the rest of the court, clergy, and prominent London citizenry seated at the tables, and even the common citizenry assembled to watch from galleries, most probably heard the verses as they were read aloud, perhaps as the subtleties were processed into the hall. That reading aloud of the subtleties adds a vocal aspect to their materiality, one that could intersect with the acoustics of the hall. In these ways, the materiality of the Great Hall at Westminster affects the material process of engaging with the subtleties by creating contexts for reading the subtleties in ways differently affected by place and the arrangement of the people within it. Some of the readers could engage, through proximity to the objects, in intimate acts of reading where they apprehend the subtleties directly. For others, whose reading of the subtleties relies on aural apprehension of the verses, distance shapes their interpretation of the subtleties in various ways, giving greater emphasis to the visual cues of the subtleties and the performance of the verses, and making their reading more public in its effects.

In their presentation at the coronation banquet and in the way the verses were likely recited for aural apprehension by the audience at the banquet, the verses of the subtleties deserve recognition for how they participate in the realm of the public theatrical spectacle, as Claire Sponsler addresses. While many of the aspects of the subtleties can be viewed as performative – particularly their
consumption and spectacular, public display – performance can also obscure the participatory role of the text itself as described above. Considering the subtleties within the framework of performance can emphasize their reception as the performative effort, with the subtleties providing the script provoking performance by the audience. In contrast, participation offers the framework for considering agency on the sides of both reader and text: the text can be an agent that interacts with readers, their mutual, co-constitutive participation constituting acts of reading.

In addition, medieval concepts of reading, as discussed in previous chapters, acknowledge that reading experiences could engage both the single reader directly apprehending the text for himself as well as audiences apprehending the text by hearing it read aloud by others. Both modes of apprehension represent acts of reading. Such aural apprehension contributes to the participatory work of reading. It also serves as a reminder to audiences today of how the medieval boundaries that distinguished between the status of a reader and that of an audience were much more diffuse and interchangeable in late-medieval England. It is in this light that the subtleties are considered here as readable, extracodexical literary works. Considering their function as readable works further underscores the necessity of adopting a framework for assessing the participatory materiality of reading, as participation can encompass the shifting interchanges between audiences and readers. Considering the evidence offered in the manuscripts for the subtleties’ original context provides details that allow extrapolation of the forensic materiality of the verses as extracodexical works presented at the banquet. This materiality, together with the textuality of the verses, converges to engage the reader in the subtleties’ participatory materiality. Yet the participatory materiality of the subtleties is not conditioned by these aspects alone. The specifics of the coronation location, the person reciting the verses aloud, the audience who reads these verses through aural apprehension, and the king who is positioned to read the verses directly, show how the verses invite participation as a mode of reading through interaction between many distinct circumstances shaped or defined by materiality. In this way, material reading becomes an embodied, participatory practice. The participatory materiality of the subtleties enfolds the interacting bodies of readers and texts into the work of reading.
Participatory materiality and mobility

Having addressed the issues of textuality, cuisine, and place, it still falls to address other aspects of the participatory materiality of the subtleties. Related to place is the issue of mobility. Almost exclusively studied in the context of medieval cycle plays and their movement through civic space, mobility conveys material force through its performance in space, through its affects in space and on bodies, and through the meaning and significance of place. The subtleties were moved into the hall and processed under the eyes of all to the king’s table, as was customary with subtleties and feast dishes more generally. Where the subtleties entered from also deserves note. The dishes for the feast were conveyed into the Hall from the Great Kitchen and temporary, improvised kitchens, all buildings outside the Hall. While the entrance to the Great Hall nearest the Great Kitchen was located midway along the western length of the hall between its main entrance on the north end and the king’s seat at the south end, it is more probable that the feast dishes – and the subtleties – were brought through the main entrance at the north end of the Great Hall. Indeed, contemporary chronicles and coronation records indicate that the main north entrance was chosen for other major entries during the coronation feast, and it therefore seems most likely that this entrance was also chosen for the feast dishes and subtleties. Use of the main entrance would have allowed these officials to process the dishes up the length of the Hall, passing between the long tables, at right angles to the king’s, that seated the attending nobility, clergy, and prominent citizens of the city; the subtleties would have processed to the king’s table beneath these gazes. Accordingly, the entrance of subtleties into the hall took part in the carefully orchestrated display that surrounded grand feasts in general and Henry VI’s coronation in particular.

How the subtleties participated in this orchestrated display must be understood as again engaged with participatory materiality: Subtleties moved as household officers carried them into the feast hall and presented them to those dining at table. As the subtleties entered, guests witnessed their movement from their own seats at tables in the Great Hall. Especially apparent in the chronicle description of the subtleties, their textual and imagistic focus on their own movement erases the movement of the officers bearing them into the Great Hall. This emphasis is made apparent through how the chronicle depictions focus only on the subtleties’ move-
ments. The first subtlety, for example, is described as ‘A sotelte, Seint Edward and Seint Lowes armed in cote armours bryngyng yn bitwene hem the Kyng in his cote armour’. Edward and Louis are recognized as the agents moving the king through space in an ideologically evocative manner. This omission of the means by which the subtleties entered the hall thus elides the movement of their bearers. Such erasure transfers the agency of movement to the subtleties themselves.

Accordingly, mobility of the subtleties offers an additional participatory materiality conditioned by the subtleties as extracodexical texts, one that relies upon the bodies of the readers to enact. For the audience of the coronation feast, the movement of the ‘Soteltes’ into the Great Hall, their procession amidst the tables toward the king’s dais, and the public reading of their texts, enjoin stillness upon their audience, who are called upon to listen, heed, and learn the lessons imparted by the subtleties’ mobility and their own immobility. Emphasizing the mobility of the subtleties and the consequent stillness of their readers suits the political and performative needs of Henry VI’s coronation event, where readersviewers and even king are the focal points of political messages designed for public reception. Showcasing the mobility of the subtleties thus contrasts with immobility of the readers, fashioning their seated performance as one of attentive listening that marks them as receptive to the instructional message of the subtleties. Such a move rhetorically positions the audience as the recipient, not the origination, of meaning – even as that meaning could not be enacted without the audience’s participation. This relationship between the meaning of the subtleties and the audience who both help create that meaning through their participation and are also the objects of that meaning complicates the conventional understanding of participatory materiality, which recognizes both the human and the object participants as interacting subjects in the evocation of meaning.31 The message of the subtleties, however, is designed to shape and even constrain the subjectivity of the audience, as it simultaneously also relies on their participation in the creation of meaning, in order to represent that audience as ideologically compliant subjects of the king. Movement becomes an aspect of reading practice that is simultaneously material and political.

The last trio of participatory materialities intersect through the mode of the visual: the imagery of the subtleties, the gestures made by the figures represented in them (in the object and the verses), and the heraldic language of their appearances that make them
easily recognizable as specific individuals. These details converge in both the description of a subtlety and its verses. Lydgate provides each subtlety with an accompanying verse, provided in the manuscript witnesses after description of the subtlety imagery. The scripture that accompanied the subtlety following the first course reads:

Loo here twoo kynges righte perfit and right good,
Holy Seint Edwarde and Seint Lowes:
And see the braunch borne of here blessid blode;
Live, among Cristen moost souereigne of price,
Enheretour of the floure de lice!
God graunte he may thurgh help of Christ Ihesu
This sixt Henry to reigne and be as wise
And hem resemble in kyghthod and virtue. (1–8)

Gestures are prominent here in the imagery of the subtlety object and its verse, giving a bodily force to the message that is designed to be recognized by those assembled in the hall at Westminster. In this way, bodily work gains material function: even those unable to read the verses can recognize the body language of its message: The two sainted kings of England and France, Edward and Louis, support between them a figure of Henry VI himself. The verse elaborates on and makes this message of support clear, couching that support temporally in the hopes Lydgate offers for the potential excellence of the king. Politically, the dual support of the kings also reminds the audience of Henry VI’s claim to the thrones of two countries. The emphasis on gesture is evident in the way Edward and Louis are ‘bryngyng yn bitwene hem’ the figure of the king. Their figurative support is conveyed through their material, embodied gestures, their action of carrying their heir who embodies England’s hopes, reinforced by the easily identifiable heraldic imagery with which their armour is depicted. This prominence of an imagistic, gestural mode of the subtlety tableau enhances the force of its political message: the choice to usher Henry VI forward is one that has been made by Edward and Louis. In this context, their gestures in support of Henry VI perform an endorsement of the new reign.

The gestures also serve another function in that, although they are physically immobile in the object of the subtlety, the language used to depict them in the description of the subtlety and in the verses emphasizes the animated nature of the gestures. In the description of the first subtlety, Saints Edward and Louis are
‘bryngyng yn bitwene hem the Kyng’; in the second subtlety, the king is ‘knelyng before’ Henry V; in the third, the Virgin Mary is ‘holding in hir hand a crowne’, while Saints George and Denis are ‘knelyng’ beside her, ‘presenting the Kyng, knelyng’ (623–4). In this way, the subtleties viewed by the audience at the coronation represent a convergence of movement with fixed image. This convergence of movement and imagery is subsequently reiterated to the audience of the verses in their manuscript contexts. This intersection of movement and imagery describing the formal materiality of the subtleties presents a shifting of meanings that construct a performance of animated materiality. Animated materiality attributes agency to the objects so moved. This contrasts with the traditional view of objects, in which their status as objects defines them ontologically as lacking in agency. Yet by simulating movement in the language of the verses, the subtleties nonetheless represent the objects as agentive subjects, carrying, sitting, holding, and kneeling. The subtleties thus simultaneously resist oversimplification into the status of static objects and images, even as they fall short of self-motivated movement. Their animation comes through performance, enhanced by hidden human agency of those carrying the subtleties into the Great Hall. This performance grants additional force to the ideology of the subtleties.

Such additional force is further reliant upon the bodily participation of viewers, evidencing an effect that reinforces the role of what digital media critics refer to as ‘haptic visuality’, in which the eyes facilitate touch. Medieval optical theories resonate strongly with the concept of haptic visuality, for medieval theories on sight presuppose exchange between objects and viewers. In particular contiguity can be drawn between the medieval theory of extramission, in which the viewer’s eyes send forth a beam that perceives the object upon which one gazes, and haptic visuality, which considers how the work of the eyes function in ways analogous to touch, for in haptic visuality sight is thought of as ‘reaching out’ to apprehend the object of a gaze. The way the performance of animated materiality engages haptic visuality means that the audience of the subtleties works to constitute the image. As Susanne Akbari explains, ‘for the subject to know the object, the two must come into contact; the object must come to be, in some way, inside the subject’. That inside-ness converges further with the materiality of cuisine that characterizes the subtleties as subtleties. But what haptic visuality makes explicit in ways overlooked in discussions of medieval optical theory is the reliance of visuality upon the body.
The act of an image’s constitution, made possible through the reaching out of the gaze represents a mutual exchange and a reliance upon the body of the viewer, without whom no gaze would be possible. Considering the subtleties in this way further illuminates the processes involved in participatory materiality. Consequently, the participatory materiality of the subtleties provides multiple modes for internalizing the message of the work.

Examining the subtleties through the framework of participatory materiality highlights the labour involved in making readers work, for it emphasizes the processes by which the meaning of materiality becomes manifest in the extracodexical text, even in its manuscript preservation. Accordingly, it offers a useful nuance to ontological approaches to materiality, in which meaning can be seen as a property of the material form. In addition, considering participatory materiality of multiple works, such as the ‘Abbey Walk’ poem by Henryson that is referenced at the start of this chapter, as well as that of Lydgate’s subtleties, reveals how these works foreground materiality in common ways that require the participation and work of readers in interaction with the material text. Like the ‘Soteltes’, ‘Abbey Walk’ focuses on a material context in which is situated an extracodexical text, and this material context supports the message of the text. Both emphasize the imagery through which the text’s message is both constituted and extended. Space and place further add to the meaning of the work, as does the movement either of the object or the reader. Accordingly, the two poems evoke shared categories of meaning: text, imagery, space and place, movement, and even the spoken quality of the words all become meaningful aspects of the works. These aspects are figured through their materiality. Furthermore, these shared modes of materiality require a reader, one who does not simply recognize these modes of the text, but whose engagement with them makes these materialities and their significance interpretable.

It is not until the narrator of ‘Abbey Walk’ approaches the wall that he then sees the text. Reading it, he understands how the stones offer a message that solves the matter he has been contemplating. Its solitude mirrors the poet’s own as he walks alone; its formal materiality, the stone wall, testifies both to how the message came into being – through human agency – even as the durability of stone suggests the durability of the message, a counterpoint to the theme of the abbey wall text that suggests all human works fall into decay. Similarly, it is not until the audience
at the coronation read the subtleties that the significance of their materiality becomes effected. The subtleties’ mobility contrasts with the audience’s presence and stillness, the readers’ degrees of proximity and intimacy with the subtleties, the visual imagery and the textual message: all these constitute processes of participatory apprehension that support interpretation. Reading materially also engages in virtual enactment, for an object provokes its materiality, and an object’s significance is not inherently in its forensic qualities, but constituted through culturally situated meaning and social ideology that is enacted by the reader. Materiality can thus effect an encounter with the virtual. Consequently, to assess medieval materiality in the context of reading practice requires understanding that it does not make meaning ontologically, but through potentialities in action. It must be understood by what it does, not what it is.

Finally, participatory materiality represents a reading practice tied to making readers work. This work is occasioned through an encounter with a text, and interpretation of the text is provoked by various aspects of a work’s materiality. As Joanna Drucker asserts, reading becomes a ‘constitutive interpretation of act’ deeply affected by the materiality of a work in a particular historical context. Assessing the relationship between readers and materiality in Lydgate’s ‘Soteltes’ and Henryson’s ‘Abbey Walk’ shows how materiality cannot be identified simply and solely through the embedded properties of an object – its forensic materialities. Materiality is also conveyed and constituted through reception of its formal materialities, which are culturally produced. Accordingly, for medieval audiences, reading materially is a practice embedded in the moment, in the space, place, and other material conditions that shape the act of reading. In addition, how these qualities – and in particular the qualities of space, place, and movement – constitute a reading practice points not only to how reading functions as a materially bound practice, but also to how reading functions as a practice reliant upon a person’s bodily presence, senses, and physicality. This suggests that a related reading practice is embodied reading, which contributes to the subject of the next chapter.
Notes

10 See Clark and Sheingorn, ‘Performative reading’ and ‘Visible words’; for Brantley, see *Reading in the wilderness*. Brantley sees the manuscript as collecting together a wide range of texts marked by their reliance upon modes of performative reading.

11 See, for example, the essays collected in *Lydgate matters: poetry and*...

12 In France during this period, the conclusion of a course ushered in the entremet, a much more dramatic spectacle than that accompanying subtleties in England (see Bridget Henisch, Fast and feast: food in medieval society [University Park: Pennsylvania State University Press, 1976], 229).

13 Critical consensus has not determined whether these subtleties were purely decorative or edible in nature; evidence suggests that some were both decorative and edible, while others only decorative. See, for instance, Anne Lancashire (London civic theatre: city drama and pageantry from Roman times to 1558 [Cambridge: Cambridge University Press, 2002], 125).

14 The text of the ‘Soteltes’ survives in nine manuscripts, most of which situated it amidst the passages of London chronicles; two manuscripts present it in miscellanies focused on literary collections. For an assessment of these manuscripts and their relationships, see Sponsler, The queen’s dumbshows.

16 Walter Schirmer suggests that Lydgate’s ‘Soteltes’ verses were displayed on a tablet or scroll; see John Lydgate: a study in the culture of the xvth century (London: Methuen, 1961), 132.

17 A description of the coronation feast and subtleties are printed in A chronicle of London: from 1089 to 1483, ed. Nicholas Harris Nicolas and Edward Tyrrell (London: Longman, Rees, Orme, Brown, and Green, 1827), 162–5, at 164.

30 Although later architectural modifications to Westminster’s Great Hall have a limited ability to comment upon the medieval fabric of the building, in Francis Sandford’s 1687 work, The history of the corona-
tion of the most high, most mighty, and most excellent monarch, James II, Sandford includes a diagram noting the layout of the Great Hall for the coronation feast, which depicts the placement of tables, tableware, and king’s dais (108–9). This layout is consistent with that used for the coronation feast of Queen Katherine in 1421 (A chronicle of London, 162–3). In particular, the diagram for James II’s banquet identifies the location of entrances added to the Great Hall after the fourteenth century and descriptively labels these entrances. At the north end of the Great Hall are the two doors, the first of which is described as, ‘The door through which the Meat was brought in from the Chequer yard’ and the second of which is, ‘The Passage into the Hall from the Cellars’. The location of these entrances suggests a routine or ongoing plan for feast items, which included subtleties, to enter the Great Hall from close by its main north entrance. One effect of bringing the items in at this end of the Great Hall is that it affords those assembled the best and longest view possible as the items moved towards the king’s seat.

33 The distinction between haptic and optical has been proposed by Gilles Deleuze as multiple functions of perception, rather than representing different senses. Building on this, Laurie Marks’s work on haptic visu-
ality in video images has been particularly influential. Marks argues that haptic visuality encourages a ‘bodily relation’ that relies on con-
nections between the viewer’s body, the object, and vision. See Touch, sensuous theory and multisensory media (Minneapolis, University of Minnesota Press, 2002), 17.

35 For further consideration of virtuality, see Órla Murphy, who addresses these blurred boundaries through the lens of intermedial-

As discussed in the previous chapter, reading extracodexical texts materially requires attending to particular details such as space and place, and embodied experiences shaped by these materialities, such as movement. These three aspects of material reading converge in a striking way when considering the role of architecture in fashioning reading practices. Architecture may not seem an obvious direction in which to look when assessing the culture of reading in late-medieval England, but its neglect intersects with modern aesthetic judgments regarding the kinds of texts deemed sufficiently literary for study, a practice that has led to neglect of extracodexical texts more generally. In fact, civic and religious buildings throughout medieval Europe, and even the households of private individuals, could incorporate text in several ways and places, from the plates used at table to the hangings and paintings on their walls. The latter category of extracodexical texts offers a striking example of the intersection between reading and architecture. Wall texts typically accompanied imagistic paintings made on the walls, or on cloths or panels hung on the walls, of churches, private houses, and professional buildings. Although not completely unknown to modern audiences of medieval culture, they are uncommon in their survival. The most well-known wall texts of the fifteenth and early sixteenth centuries survive only through transcriptions of the texts recorded in manuscripts, where they may be supplemented only by brief descriptions of the images they once accompanied. Yet both in manuscript and in what can be reconstructed of their original locations, wall texts present another opportunity to examine how readers related to texts outside the bounds of manuscripts, and present instead in alternative material spaces. They also provide reminders of how richly textual were daily lives in late-medieval England, where texts might appear in cathedrals, guild houses,
and well-to-do households not only in elaborately decorated manuscripts, but also on pottery vases, pitchers, rings, panel paintings, wall hangings, and wall paintings – to say nothing of the text in cathedral windows.

Confronting the practice of reading in architectural contexts requires further widening recognition of the spectrum of participatory reading experiences, particularly those shaped by materialities. In an architectural, extracodal text, reading does not occur only when a reader holds or views a static, stationary book. It can also occur as readers moved throughout rooms, walking by or walking to or walking around textually contingent places and objects. Such places are socially constructed, and as such not only are shaped by the people who designed and used them, but shape those people in return. Such effects extend also to reading practice. In particular, movement in architectural space further emphasizes the social and physical role of the body in reading practice. Such considerations as these are not restricted, however, to medieval literary culture and architecture alone. Writing about such physical experiences in more modern contexts, digital media theorist Mark Hansen and others emphasize how bodily engagement with the world around a person can create marked effects. Acknowledging how various forms of media, and media located within particular places, promote specific types of relationships with readers today, it becomes particularly clear that understanding of medieval textual culture can be enriched by considering how texts, such as wall texts, might elicit or promote distinct types of interactions with readers. I contend that these modes of participation could, in turn, shape reading practices and reading experiences. Consequently, focusing on wall texts provides an opportunity to consider how architecturally inflected participation might arise, what its processes of apprehension might be, and how participation through architectural reading might shape interpretation. In particular, because wall texts can be located in spaces that people moved through, the reading experiences involving wall texts occasion the participation and shaping of the body as it negotiates the material, architectural space that also becomes readable space. Accordingly, in this chapter I will examine two sets of wall texts surviving in manuscripts that evidence details of their original architecture contexts, one secular and one religious, and will argue that the material environs effect alternative modes of reading experience shaped by both architectural space and the embodiment of readers.
The Percy wall texts

The secular example with which I begin addresses a series of particularly noteworthy wall texts recorded in the mid-fifteenth-century English manuscript MS Royal 18.D.ii at the British Library in London. The manuscript is best known as the sole illuminated copy of Lydgate’s *Siege of Thebes*. The illuminations in the manuscript were added after the Percy family acquired the book in the early sixteenth century. These were not the only additions made to the text in the first quarter of the century, however. Initially the manuscript only included two texts, namely Lydgate’s aforementioned *Siege* as well as his *Troy Book*. Sometime between 1516 and 1527, following its acquisition by the fourth Earl of Northumberland, Henry Percy, the manuscript was expanded. The new additions included a metrical chronicle of the Percy family as well as copies of additional verses painted on walls and ceilings of two of the family’s Yorkshire estates. The latter form the particular interest of this chapter, notably for how they connect reading and architectural space, for the way these connections function to shape the authority of the Percy family, and for how they enable recognition of a late-medieval secular mode of contemplative, domestic pilgrimage enacted through embodied reading.

The Percy wall texts are significant both for the number that survive and for the manuscript’s descriptions that locate them within specific rooms and buildings on two of the family estates, the manor houses of Leconfield and Wressle. These rooms include a library ceiling, the Earl’s son’s private closet, garden-houses, and a bath – spaces both private and semi-public within the estates. In their subject matter, consistently instructive, the Percy family wall texts touch upon proverbial advice regarding sin, the vanity of human delights, a moralization of musical instruments, a dialogue about youth, and Aristotelian advice to princes. Together, they create a series of didactic works that, as one of the verses painted on the Earl’s son’s closet proclaims, ‘made this hous for contemplacioun’.

In effect, Royal 18.D.ii preserves a rare textual anthology of both the wall texts and the designations of the architectural spaces in which they were designed to be read. In this context, reading is not an experience bound solely between the covers of a book or kept within the temporal bounds of an individual, public, or private reading event, but figures as an intrinsic element of the household’s architectural fabric and, indeed, that of the collective Percy estates.
Similarly, architectural space figures as an essential constitutive frame for the reading experience, a subject lightly touched upon in the previous chapter, but deserving of extended attention.

The surviving wall texts thus represent the Percy estates as spaces that – through the verses’ original collection on specific estates, and as unified again in manuscript – invite readers to traverse the Percy holdings and view the houses and estates as readable, textual, literary works. These verses manifest the estates in ways both virtual and physical, represented in the former through the manuscript, and in the latter through the original spaces they accompanied. As such, the verses invite readers to become virtual and physical tourists of the estate. They figure the Percy household as a space performed through embodied reading. In this reading experience, the reader’s physical body assumes a significant role in the production of meaning that is, here, related to the spatialization of the Percy wall texts. Even as they figure the household in this way, they also contribute to the assessment of the varying materialities constituting late-medieval English literary culture, a culture that encompassed both embodied reading practice and large-scale spaces and places like the Percy estates. The Percy family wall texts demonstrate how, in and outside of books, a particular category of literary production invited readers to move through, use, and relate to space.

A review of the two manors mentioned in the manuscript anthologizing the wall texts, Leconfield and Wressle, will give context to the verses and their role in creating spaces for the transit of readers in the Royal manuscript and on the estates themselves.

Leconfield was located in the East Riding of Yorkshire, and functioned as the principal seat of the Percy family from the fourteenth through sixteenth centuries. Demolished in 1608–9, only earthwork remains today and these indicate the layout of what once was a fortified manor house surrounded by a moat. In the sixteenth century, however, a survey made in 1537, an inventory of 1577, and an estate plan of 1591 provide some details of the manor’s layout around the time the verses were collected in the Royal manuscript. Leconfield was a quadrangular manor with three-storied towers at each corner. Residential wings flanked each side of the central courtyard, and the great hall was located opposite the entrance. The 1577 inventory noted a total of eighty-three chambers in the house; the earl and his family spread over twenty-three chambers in the south wing, which included a great chamber, a chapel, and a dining chamber, in addition to the closet of Lord Percy (the Earl’s
son, later the sixth Earl of Northumberland) and the library mentioned in the manuscript description of the verses. A deer park, ‘very fair and large and meatley welle woddid’, with a towered, brick house located a mile from the main house (referred to as the ‘New Lodge’) and garden (containing a multi-storied chamber) completed the grounds of the estate. The New Lodge was referred to in the household regulations of the fifth earl, compiled beginning in 1512, as the ‘secret house’ (secret house). In it, the earl annually broke up his household to retreat with select family and companions while taking the annual accounts. In addition, the household regulations record expenses for providing wood for fires in various rooms at Leconfield, including ‘My Ladies Lybrary’, ‘My Lords Lybrary within the Manner’, and ‘My Lords Lybrary over the Chapell Dour within the Manner’, and similarly record the expenses for a groom of the chamber whose duty involved ‘kepynge of Fyre in the Jewell-Hous and Lyberary and Houses in the Garden and outhere places where my Lorde shall syt aboute his Books’ (353, 378). While this is the barest beginning of how the estate might be assessed, the repeated emphasis on the spaces the estate offered for reading situates its architectural fabric as part of the design that the wall texts themselves complemented and extended. Leconfield was made for reading.

Like Leconfield, Wressle Castle shared much in common with the layout of Leconfield. It too was structured as a quadrangular manor with multi-storied towers at each corner. Wressle survives today in the East Riding of Yorkshire only as ruins, three sides of this quadrangular castle having been demolished around 1650 or later. As with Leconfield, a garden inside the moat complimented the property, and the descriptions contextualizing the verses in Royal 18.D.ii indicate that Wressle included a house with an inner and outer chamber, its design perhaps inspired by the ‘medieval love for the sequential planning of spaces’. At Wressle, the castle similarly emphasizes the value and necessity of reading, as the sixteenth-century antiquarian and book collector John Leland delightedly indicates in his description of Wressle from his 1538–43 Itinerary:

One thing I likid exceedingly: yn one of the Toures ther was a study called Paradise, wher was a closet in the middle of eight squares latisid aboute, and at the top of every square was a desk legid to set bookes on booke on cofers within them; and this seemid as joined hard to the toppe of the closette, and yet by pulling one or al wolde
Here, Leland describes a study – significantly named Paradise – that possessed a kind of Murphy-bed-style octagonal bookcase with pull-out shelves that converted into standing desks for the convenience of readers consulting multiple volumes. These descriptions of architecture, furnishings, and household maintenance practices at both Leconfield and Wressle clearly demonstrate the Percy family’s deep interest in linking reading and architecture throughout two of their most significant properties.

Within these spaces can now be situated the specific locations of wall texts. MS Royal 18.D.ii records six different sets of verses in five different rooms at Leconfield. The rooms decorated with wall texts included the ‘garett over the bayne’, which provides a dialogue between the ‘parte sensatyue’ and the ‘parte intellectyue’ on the vanity of human delights; the garret could be either a room over the bath-chamber, or the ceiling of the bath-chamber. The ‘garet at the New lodge in the parke’ offers a poem on music as a metaphor for the well-ordered, virtuous life; this space might have served as a music room for the earl’s pleasure during his annual retreat or during other times when he might wish to live separately from his household, as verses are composed on a variety of instruments. Between this set of verses and the next, the manuscript introduces a full-page illuminated Tudor-Percy emblem on f. 200r, the folio verso left blank. The emblem depicts a sun-in-splendour superimposed by a Tudor rose above a silver crescent that alludes to the Percy family, and includes additional imagery along with Latin and Middle English verses. Following the emblem, the provision of wall texts continues with proverbs on hope located on the ‘rooffe of the hyest chawmbre in the gardinge’, also on the walls of garret in the garden are verses relating the counsel of Aristotle to Alexander the Great; following these, ‘in the rouf of my lorde percy closet’, are proverbs about how, in youth, to become wise through study, which seem pointedly directed to the fifth Earl’s son, Lord Percy, later the sixth Earl; lastly at Leconfield are proverbs on ‘the roufe of my lordis library’ that guide readers in their practice of daily virtues.

At Wressle, three sets of verses decorated the walls of a single room of a house in the garden: first listed are those in the ‘Innere chamber abouv of the house in the garding’ that provide advice on a life of moderation, and which represent selections from Benedict
Burgh’s ‘Cato major’, a translation of the Distichs and the only set of wall texts in either household for which there are other witnesses. On the walls of the ‘side of the vther chamber aboue of the house’ is more advice from Aristotle to Alexander; on the ‘side of thutter chamber aboue of the house’ are proverbs encouraging a virtuous life that twice refer to themselves as left to the reader ‘for a memorial’, one quatrain explaining further that this memorial is, ‘Of loue and kyndnes and gode mynd special’, suggesting a mnemonic function to the verses as well.

In both their original locations and in the manuscript versions, the context provided for the wall texts indicates the extensive connection between the estates’ architecture and the wall texts, and also indicates how this extensive textual architecture might have shaped readers’ experiences. First, the texts in situ were not confined to a single room or even a single building at Leconfield, and even in Wressle occupied multiple rooms. Such a mode of organization would have required readers to move through multiple rooms and buildings in order to read them all at Leconfield, and multiple estates to read the entirety of them, an accomplishment most accessible to members of the family, their household, and frequent guests. Second, the manuscript version of the texts collects them all in a single, physical space, thus providing a more accessible source for those interested in reading the texts, but disinclined or unable to move between the estates and buildings. Third, the inclusion of the Percy emblem amid the manuscript presentation of the wall texts suggests that this unit in the manuscripts serves as more than a simple catalogue of texts that originated elsewhere. As such, the wall texts of the manuscript must be apprehended as part of a discrete work the emblem helps to create out of that section of the manuscript.

Recognizing these significant features of the wall texts suggests that, when considered for how they shape reading experiences, the reading experiences of the audiences engaged by each version of the wall texts must differ. This point may seem transparently obvious, but is worth stressing nevertheless for its ramifications. As audiences read the different versions of the wall texts, the spaces they traversed differ; readers of the texts originally located across the Percy estates were required to physically move among the buildings and estates (approximately twenty-five miles apart) in order to read the texts, while the readers of the manuscript version traversed the spaces virtually, and thus with greater ease. These dissimilar modes of access and reading impact how the Percy
estates and MS Royal 18.D.ii contextualized the estate spaces and reading experiences, even though the modes of access – architecture, reading, and movement – seem initially points of commonality between the two.

Before pursuing this analysis of architectural reading further, discussion of the theoretical framework that underlies the consideration of the wall texts in their spatial settings will help evaluate the significance of the wall texts in their architectural settings, and the consequences their settings carry for our understanding of the embodied reading processes they provoke. This study emerges from intersecting focuses on bodies, architecture, and reading that are current interests in digital media and medieval studies. In particular, I employ the work of media theorist Mark Hansen, whose work has influenced the phenomenological approach to theorizing and analysing digital media. In ‘Wearable space’, an essay that became a chapter in *Bodies in code*, Hansen begins not phenomenologically, but with a nod to Gilles Deleuze’s *Cinema 1: the movement image*. He first focuses on a concept introduced by Deleuze, that of the framing function performed by the technical image (a function that includes, for example, the technologies of the photograph, the film camera, and video camera). Deleuze identifies the frame as ‘a relatively closed system which includes everything which is present in the image – sets, characters and props’.18 According to Deleuze, what makes the frame a closed system is its relation to what is out-of-frame and is, therefore, ‘out-of-field’, which ‘refers to what is neither seen nor understood, but is nevertheless perfectly present’.19 As Deleuze further explains in *Cinema 1*,

[T]he out-of-field already has two qualitatively different aspects: a relative aspect by means of which a closed system refers in space to a set which is not seen, and which in turn can be seen, even if it gives rise to a new unseen set, on to infinity; and an absolute aspect by which the closed system opens on to a duration which is immanent to the whole universe.20

This relative aspect of the frame creates space by its reference to what is not seen but, through the moving focus of the camera or through montage, relates one frame to the next. For Hansen, Deleuze’s concept of the frame centres on bodily experience, for the ‘the bottom line is we are able to perceive images only because we sense ourselves as form’.21 Hansen builds on this concept by arguing that our cultural shift to the digital ‘has suspended the
framing function’ of the technical image, and ‘has accordingly empowered the body, in a truly unprecedented way, as the framer of information’. Thinking of the shift away from the framing function of the technical image to the body as framer of information not only allows Hansen to move from ontological analysis to the phenomenological, but also carries ramifications for my argument and medieval studies more generally. That is, Hansen’s shift is important for the way it suggests possible application of the analysis of modern digital culture to pre-print culture, where the body can also be similarly considered the framer of information or, more appropriately for medieval culture, knowledge. Accordingly, Hansen’s relocation of spatial meaning from cinema technology to the embodied frame offers the grounds for applying digital media theory on space and architecture to medieval works.

Hansen connects his analysis of the frame to architecture, which works as a framing function and in relation to the body: ‘architecture has, quite simply, displaced cinema as the quintessential art of framing for our time. … [A]rchitectural framing necessarily involves a negotiation between formal manipulation, built space, and the life of the body’. For Hansen, to study the architectural is to consider how it relates to our embodied lives, how it is calibrated to them, and how it interacts with space. Considering space, in turn, involves the consideration of movement, that is, how one navigates bodily through space. Architecture, space, and embodiment are inextricably intertwined. For Hansen, these interactions create ‘wearable space’. He explores the notion of wearable space through the Japanese-American artist Arakawa’s concept of the ‘architectural body’: since the body, Hansen summarizes, is always a body in space, it thus becomes an architectural body. For Arakawa and his long-time collaborator Madeleine Gins, architecture contributes fundamentally to the fashioning of the self, acting as an ‘outer skin’ that dictates ‘our behavior, beliefs, [and] perceptions, as well as our ways of living our lives’. Thinking of architecture as wearable space will impact our understanding of the wall texts in their architectural setting, as will be discussed further below.

In analysing how the architectural body spatially conditions human perception, Arakawa and Gins posit the notion of ‘landing sites’. Landing sites describe how different forms of attention situate the body within an environment. As Arakawa and Gins explain, analysing landing sites enables one to ‘gain perspective on human functioning and separate out its component factors …
Reading architecturally

kinaesthetically, tactilely, visually, orally, olfactorily, and gustatorily all at once’. Hansen adds that these landing sites ‘occur as a perceiver’s perception ... lands here and there’, and compel ‘the body to concentrate on recalibrating itself’ in relation to space. In other words, landing sites implicate how the body participates with architectural space. Landing sites operate through three imbricated modes of attention: perceptual, imaging, and dimensionalizing. The perceptual landing site ‘lands narrowly as an immediate and direct response to a probable existent, a bit of reporting on what presents itself’. Such a site might be the manuscript in front of a reader, a chair, a wall: whatever occurs in proximity to the body. In contrast, the imaging landing site ‘lands widely and in an un-pinpointing way, dancing attendance on the perceptual landing site, responding indirectly and diffusedly to whatever the latter leaves unprocessed’. The imaging site shares some characteristics with Deleuze’s notion of the out-of-field; it may be diffused, and perception might include what exists or happens around the corner, or will occur later in the day. Finally, the dimensionalizing landing site ‘registers location and position relative to the body’; it creates the perception of depth and the effect of the siting environment. As Hansen summarizes, these sites ‘are responsible for embodying space, for imbuing it with a sensory richness that yields bodily meaning’.

In this approach to assessing how architecture participates with a person to affect apprehension and interpretation of space, we can already begin to see how analysis of the Percy wall texts, in their manuscript instantiation and in their original context, might be approached. Before offering such a reading, however, I want to emphasize how the practice of reading fits into this constellation of architectural, spatial embodiment. It has long been an understanding among medievalists that the body bears an important role in understanding medieval book culture, particularly through the influential book-as-body metaphor, and more lately in grappling with the recognition of the ways in which medieval manuscripts were based on the flesh of slaughtered animals; in recent years, scholars have acknowledged that reading, too, can involve the body, particularly through the mode of performance. Assessing the performative aspects of reading which contribute to the role of reading as an embodied experience, we should not only acknowledge performative and sensory modes of apprehension, such as the sensations of touching the flesh pages of a manuscript, but consider how other practices, such as materialities as discussed in the
previous chapter, also contribute to embodiment. In this context, movement, which Hansen views as central to space–architecture–body negotiations, has a role in medieval sensory theory, which itself offers insight on a medieval theory of embodiment: it is through movement that the body visually, aurally, tactiley, spatially, and olfactorily apprehends its environment. This view of space–architecture–body negotiations provides a means for assessing the processes through which architectural reading relies on embodiment, and refines the role of medieval theories of the senses in the context of reading. Engaging embodiment and architecture in these ways points to the generalized nature of medieval reading as embodied experience, and to the specific functioning of architectural reading practice.

Consequently, in turning to architectural reading as the practice through which the wall texts of the Percy estates and MS Royal 18.D.ii can be apprehended, the body assumes a key role in constituting meaning through the experience of reading. As noted above, the meaning thus constituted will differ when considering the locations and reading experiences of the wall texts. First considering the texts as originally located on the Percy estate, as one of the verses notes, reading them casts the house – and the outlying buildings into which the wall texts extend – as an architecture of secular, household ‘contemplacioun’. Although conventionally a devotional, immaterial practice, such contemplation relocates the readers’ focus from the realm of the immaterial to the material. In Arakawa and Gins’s terms, the readers’ ‘architectural body’, their outer skin, incorporates all the information from the landing sites of each space in which they encounter the wall texts. Such incorporation does not simply insist on embodied reading, but also widens the readers’ embodied perspectives, which become informed both by the didactic message of the texts, as well as by the servants that pass through or by the rooms, intent on their work; the other people using the spaces for edification, labour, or devotion; and those who are not present, but absent, intent on other activities. Consequently, the reader participates in the pageantry of life on the Percy estate, whether they read at Leconfield or Wressle.

To read on the estates, and to read these verses with the architectural body, encourages readers to recognize how the Percy family values proverbial advice, classical learning, and appreciation for the moral instruction of the musical arts, and to recognize how they decry vices: these are portrayed as essential not simply to the intellectual or moral life of readers, but also to the readers’
conduct of themselves and their bodies. Indeed, this reading mode both emphasizes and models, through its embodied physicality, such a mode of living for the reader. Through the embodied role of reading and the architectural body, the reader, who becomes clothed in this educative space, both perceives and participates in the moral model household of the Percy family.

The localizability of the wall texts informs readers about virtues particular to the use of specific rooms in specific spaces. In Lord Percy’s closet at Leconfield, for example, the wall texts inform the reader that the youth who ‘thynkithe himself wyse / Shall know himself better by vertuus exercise’ (202r / Flügel 482). These same verses, however, also comment on the mobility of information and learning: the youth who takes advantage of the opportunity to gain knowledge and skill in reasoning through study – perhaps even study in the library whose walls were decorated with proverbial advice – will be able to ‘bere them away for his owne goode informacion’ (ibid.). A later line additionally recommends moderation in education, as other verses recommend moderation more generally, advising readers that ‘But allway to be in stody dryethe vp a mannes blode’ (ibid.). The verses thus gesture to their location-specific function, suggest the transportability of the virtues gained in different spaces, and indicate that physical engagement with the texts read becomes part of the practice of these virtues. Furthermore, because the verses can be found in not just one room, but many, and not just one estate, but multiple estates, this moral mapping makes a statement that encompasses the Percy family lifestyle as a whole, and suggests the transferability of this lifestyle to readers outside the Percy family: it is both individuated to the family, but learnable by non-family readers. Even the recommendation to spend time on activities other than study encourages readers to move elsewhere and pursue other activities – into, for example, the park, where readers could enter the New Lodge at Leconfield for musical practice and encounter the verses there, or into the garden and the garden-houses possessed by both estates, and gain new opportunities to embody and be clothed in the moral architecture of the other verses.

Furthermore, the role of landing sites as applied to the Percy family wall texts suggests how the architectural environment of the texts would have engaged the readers’ participation and thus their apprehension of the texts themselves. Royal 18.D.ii does not simply supply the name of the room or building in which wall texts are located, but also often identifies them spatially, as located in
the ‘rooffe’ or the sides of chambers. It also identifies the rooms in relation to other rooms, emphasizing how the space of a particular wall text was meant to be understood. Wall texts are located in the ‘hyest chawmbre’, the ‘vtter’ (outer) chamber ‘abouv of the house’, in a ‘closet’, a ‘garett over the bayne’, the garret of the New Lodge, a mile distant from the manor itself. Spatially these rooms signify exclusivity of access, privacy, elevation. The work of accessing them at the estates themselves, and through the descriptions in the Royal manuscript, emphasizes that these architectural spaces convey meaning of which the reader of the wall texts is elicited to be aware.

As a result of such awareness provoked by landing sites, the reader engaged in apprehending the wall texts is made cognizant of reading as a bodily activity shaped by the architectural space of the texts. Places are not interchangeable; to read the music proverbs in a ground-level, great hall would produce a different interpretation and yield a different experience than would reading them in the garret in the New Lodge. In a great hall casually open to the public, the music proverbs would produce a reading experience shaped by the details of that landing site, attesting to a general valuation of musical instruction; in the garret above the New Lodge, they become woven into the apprehension of individual music education, eloquent of the personal value the earl places upon fluency in the art of musical practice. Further details of the spaces no longer recoverable would add to these readings in even more detailed ways: the nooks and crannies of the rooms, the presence or absence of windows and natural lighting, even the presence of servants or other people.

In contrast to the verses as they might have been read at Leconfield or Wressle, the manuscript version of the verses in Royal 18.D.ii provides an alternative perspective of the Percy estate. First, some description of the manuscript provides additional context for understanding the verses. The manuscript is a sizeable volume, measuring 395 × 280 mm: a large book probably made for display and public reading, and less for individual reading experiences. Perhaps originally for presentation by its first owner, Sir William Herbert, the first Earl of Pembroke, it entered the Percy family when Henry Percy, the fourth Earl of Northumberland, married Maud Herbert, William’s daughter. It then came into the ownership of Percy’s son, Henry Algernon, for whom the manuscript was expanded to include material specific to the Percy family. The wall texts themselves are written in a
gothic hand and decorated by large capitals with all the strapwork, flourishes, and decorative techniques of a display script. In its inclusion of the wall text verses, the manuscript seems to imply use elsewhere than Leconfield in particular, where manuscript access to the wall text verses might seem redundant, as so many of them focus on spaces on that estate; read in Wressle Castle, it could evoke the distant Leconfield while also providing the text of the verses in the Wressle garden-house; read elsewhere, it could evoke both absent estates.

While the reader of the wall texts in their original locations, who would pass amongst rooms with verses, would also be aware of rooms without verses, and thus tie the advice of the verses more strongly to specific types of activities available elsewhere on the estates, the manuscript version of the wall texts depicts the estates almost in the form of a summary, or synecdochally, in which the absence of rooms becomes less noticeable, and this ‘highlights tour’ of the estate represents the entirety of the estate. In Deleuze’s terms, the other rooms of the estates are wholly ‘out of frame’ of the manuscript. Restricting the frame of the estates only to those rooms mentioned in Royal 18.D.ii consequently shapes the readers’ focus exclusively on the work of this more limited collection of architectural frames. Yet the rest of the manuscript’s contents might be viewed as standing in place of the absent rooms; it is to these works that the manuscript assemblage of the verses connect, rather than to other rooms at Leconfield and Wressle. These other texts include John Lydgate’s ‘Testament’, ‘Reignes of the Kinges of England’, Siege of Thebes, and Troy Book; William Cornish’s A Treatise between Information and Truth; John Skelton’s ‘On the Death of the Earl of Northumberland’; the anonymous Le assemble de dyeus; the anonymous ‘The blysyoure of the arms of kyngis’, which describes the arms of various kings; William Peeris’s metrical chronicle of the Percy family; and, of course, the Tudor-Percy emblem placed between two sets of wall texts.

Overall, the manuscript includes works that provide advice on governance and moral authority, and others that speak to the history and might of England’s secular rulers in general and the Percy family in particular. As Alexandra Gillespie characterizes the miscellany, it sustains ‘traditional ideas about noble service to the monarch’.33 Viewed in a slightly different light, the texts move from a devotional exaltation of the virtues of Christ to several texts that engage, at a global-historical (Troy Book and Siege of Thebes), national (Lydgate’s ‘Reignes’), and local (Peeris’s chronicle) level
with the virtues, successes, failures, and necessary skills of secular rule, before ending with the wall texts. In consequence, the wall texts seem representative of the virtues and successes of private life that follow those of public service, and specifically testify to the private as well as public values and morals of the Percy family.

In the coupling of the verses with descriptions of architectural space, the wall texts of Royal 18.D.ii invite virtual movement through the estate. The role of movement indicates the significance of the embodied role of reading and the way that such a mode of reading can be enacted virtually. The way the manuscript wall texts invite movement into the virtual space of the estates’ educational architecture intersects with recent scholarship on virtuality in medieval literary contexts. In particular, Seeta Chaganti has emphasized how multimedia combinations of, for example, ‘murals, architecture, sculpture, poetic inscription and kinetic bodily participation’ lead to the articulation of a virtual space for the viewer.\textsuperscript{34} The Royal manuscript, however, demonstrates how a single medium, poetic inscription, can create similar effects exclusively through its textual representation of architectural space. Architectural framing alone suffices to create virtual space through which readers can travel. Significantly, this suggests that focus on the role of ‘multi-’ in multimedia may not be a necessary condition for virtuality, particularly for medieval audiences conditioned to make connections across media instantiations of narratives – for example, hagiographic narratives in manuscripts and stained glass windows – on their own. Rather, the crucial determinant of virtual space is the role of embodied reading. When texts or other media works rely on, invite, or recommend experiences that situate reading as embodied experience, virtual movement and spatial negotiation commonly follow. For Hansen, to be embodied is to negotiate the relationship between the body and space. Furthermore, reading with the architectural body locates readers as central participants in the act of making meaning: such meaning exists not solely in the words of the texts themselves, but in the spaces and how the reader both perceives and relates to them.

Lydgate’s \textit{Daunce macabre}

The importance of space and place is particularly crucial to another set of wall texts, the \textit{danse macabre} of the medieval St Paul’s Cathedral in London. As such, the \textit{danse macabre} demonstrates another example of architectural reading, showing how it emerged
in contexts other than that of wall texts situated in the domestic household space. John Lydgate based his translated, revised and extended version of the danse macabre verses upon those painted on the outer walls of the charnel house (a building in which bones are piled) that bordered the cemetery of the Franciscan parish church Les Saints Innocents. The Parisian mural was created in the mid-1420s, and Lydgate likely saw it when living in the city from 1426 to 1429. Arranged in several sequential images, the mural depicted personifications of Death, represented as a decomposing corpse, leading away people who represented members of medieval society, such as kings, cardinals, merchants, and gentlewomen. Verses accompanied each pair of figures, one stanza in which Death addresses a person, commenting on the inevitability of death that the person’s privileges cannot gainsay, and one stanza in which the person responds, first in protest and in contemplation of their sins, then in reluctant acceptance. Although not the first artistic depiction of the personification of death in medieval artistic culture, the Parisian danse macabre proved immediately influential; by the mid-fourteenth century churches across Europe had been adorned by the danse macabre. It was also quick to enter print circulation: by 1485 the Parisian danse entered print publication, and in 1538 Hans Holbein published a series of woodcuts of the danse likely based on the version at Basel. Its inclusion in St Paul’s Cathedral in London represents the earliest adoption of the danse macabre outside Paris, fashioned about five years after the Parisian danse was created and Lydgate first saw and translated it. Lydgate’s Daunce of Poulys, as a text and in its location in St Paul’s Cathedral, has enjoyed greater attention in recent years in the wake of growing interest in both Lydgate’s work in general and his engagement with materiality. Although the danse at St Paul’s was destroyed in the mid-sixteenth century, and there are many questions about it that cannot be answered, documentary records, archaeological evidence, and manuscript witnesses to the London danse illustrate how it, as with the wall texts of the Percy estates, invited participation through space and place, visual apprehension, and mobility.

Place is particularly important to how the Daunce of Poulys invited participation, and what details can be identified about that place deserve consideration. Some of these details can be had from the surviving manuscripts that take care to indicate the place and space the poem inhabited. One of these manuscripts, Cambridge, Trinity College R.3.21, an important collection of
Lydgatean verse, identifies the original location of the poem, later supplemented by further details in a second hand. The scribe provided his description of the poem’s place in a rubricated headnote: ‘hEre foloweth the Prologe of the / Daunce of Machabre translatyd by / Dan John lydgate monke of Bury out of / ffrensshe in to englyssh. whyche now ys / callyd the Daunce of Poulys’. Later, a second hand added more details around the headnote, noting below that ‘& ther was pryntyd in þe cloystar at þe dispensys & request of Jankyn Carpynter’, while mentioning in the top margin above that ‘this daunce of machabre is depeyntyd richly / at sent innocents closter in parys in fraunce’. Both the scribe and the writer of the later gloss emphasize the lineage and situation of the danse at St Paul’s, with the scribe associating it more generally with St Paul’s, and the second hand providing specific details of its place within St Paul’s precinct: the Daunce of Poulys was located in the cloister.

Which cloister at St Paul’s enclosed the Daunce of Poulys is made clear by the sixteenth-century historian and antiquarian John Stow, who comments upon it in his survey of London, stating that

There was also one great Cloyster on the north side of this church inuironing a plot of ground, of old time called Pardon church yard, wherof Thomas More, deane of Pauls, was either the first builder, or a most especiall benefactor, and was buried there. About this Cloyster, was artificially and richly painted the dance of Machabray, or dance of death.

The scribe adds a few key details to the descriptions of Lydgate’s poem in Trinity College R.3.21: the cloister enclosing the Daunce of Poulys framed a space referred to as the Pardon Churchyard, and had been built or rebuilt by Thomas More in the early fifteenth century. Pardon Churchyard was located on the north side of the cathedral, situated in a square framed on the south and east sides by the nave and north transept of St Paul’s. The degree to which More intervened in the cloister’s space remains as uncertain to audiences today as it did to Stow in the mid-sixteenth century, but evidence from archaeological research indicates that the space had been used for burials dating from the Anglo-Saxon era through the thirteenth century; by the fourteenth, it appears regularly as Pardonchirchhawe in the wills of citizens requesting burial there. Pardon Churchyard thus had functioned as a space important for several centuries to the citizens of the city who sought burial in its grounds.
Whether More’s contribution in the 1420s was to arrange, as Stow notes uncertainly, for either the endowment or building of the cloister, it is clear that by the time Lydgate translates the verses, the space had become enclosed and thus less accessible to the general public. Amy Appleford views this enclosure and restricted access as one possible motivation for John Carpenter’s contributions to having Lydgate’s *Dauoce Macabre* installed in the cloister at St Paul’s. John Carpenter worked as the ‘secretarius’ for the city of London, its Common Clerk, from 1417 to 1438. He also compiled a manuscript documenting the practices of the city, a custumal called *Liber Albus*, and later became a member of Parliament. Carpenter was thus deeply engaged in the civic life of London, and his provision for the installation of the *Dauoce of Poulys*, Appleford argues, represents the assertion and insertion of civic interests into the sacral space of St Paul’s.

Civic influence at St Paul’s could also be expressed in more mundane and quotidian ways. Although the period in which the *Dauoce of Poulys* was fashioned and installed in the Pardon Churchyard was yet a century from the notoriety of ‘Paul’s Walk’, in which city fashionables and news hunters promenaded through the middle aisle of the cathedral nave to display their selves and discover news, St Paul’s nonetheless contributed to and manifested the interests of citizens in many ways. Scribes assigned to serve the populace occupied designated places in the nave; its bells regulated the opening and closing of city markets; traffic between its north and south doors led to irritation and, by the mid-sixteenth-century, a mayoral injunction against the carrying of ale, fish, and foods through the short cut. Boys gathered in the precinct grounds to play ball games until they were forbidden in 1385, and in 1400 a pretend battle among youths enacting disputes between the monarchies of Britain became an actual battle that ended with bloodshed and death. Some guilds also used the space for their own purposes; for example, the fullers assembled to attack one of their fellows there in 1365. More significant to civic welfare were the uses of the space around St Paul’s Cross in the north-eastern yard as a site for folkmoots, where as early as 1263 the guilds ‘won rights of self-determination for the first time in the city’s history’. As David Lepine observes, the spaces and places of St Paul’s served a variety of civic and secular social purposes.

This use of St Paul’s space particularly affected the locale of *Poulys Dauoce* and, consequently, its reading. Its enclosure with the cloister built or endowed by More sought to effect a removal
of the space from the city, and even a separation of the churchyard from the grounds of St Paul’s itself. Such restrictions on access effected through the claustration of the Churchyard, however, may have had the counter-effect of making the space more desirable to the people of London. Over the course of the fifteenth century, Stow notes that Pardon Churchyard became a desirable space for burials of the city’s elite: ‘In this Cloyster were buryed many persons, some of worship, and others of honour. The Monuments of whome, in number and curious workmanship, passed all other that were in that Church’. The popularity of Pardon Churchyard as a desirable burying-ground for those of status in the city, ‘in the years that Westminster Abbey was becoming the royal burial church and thus exclusive, ... gave tomb-makers more chances to innovate and establish fashionable designs’. Its restricted access and the innovative possibilities for its monuments made it a fashionable place to be seen in death.

It is within this space of the Pardon Churchyard and Cloister that Carpenter had caused the *Daunce of Poulys* to be installed on the inside wall of the cloister, ‘curiously painted vpon boord’, as Stow notes. It thus framed Pardon Churchyard with its tombs and monuments. The location of the *danse macabre* on the walls of the cloister itself furthered this connection to death and reading, for the architectural conventions of the monastic cloister upon which the cloister of St Paul’s and other secular cloisters drew identify the space as one for reading. That is, cloisters by the end of the eleventh century ‘had become the place for reading *par excellence*’. In monastic cloisters, the cloister walks were often filled with book chests and cupboards; the arcade that let light and air into the cloister walk frequently included low benches at its base, so that monks might sit upon them to take advantage of better light for reading. While no archaeological evidence remains of the arcade at St Paul’s to indicate whether it, too, included such a bench, the cloister participated in a long history associated with reading. This association was furthered in the 1440s, less than a quarter-century after the installation of *Poulys Daunce*, when Walter Sherrington, a canon of St Paul’s from 1440 to 1449, established a library over the east walk of the cloister. Like the Percy family estates, the Pardon Cloister housing the *Poulys Daunce* was a space designed for reading. That *Poulys Daunce* inhabited a space designed for reading furthers understanding medieval perceptions of the range of experiences bound up in the act of reading, for *Poulys Daunce*, as a mural series, could be considered primarily a work of visual
artistry, and could also be considered a performative text that leaned on the conventions of drama.55

These details of space and place further indicate how they, as landing sites, shaped the reading of *Poulys Daunce* in ways that, by design and by chance, could affect interpretation of the work. That is, following Appleford’s argument, Carpenter’s contribution of *Poulys Daunce* linked the city to the sacral space of the Pardon Churchyard. Pardon Churchyard itself linked to the city through the myriad ways that people of London made their presence felt in St Paul’s. To read *Poulys Daunce*, then, was not simply to be educated in or reminded of the ever-present possibility of death and the need to prepare for it as individuals. To read *Poulys Daunce* was also to be invited through its architectural setting to consider the application of death to the community: to the dancers the work depicted, who included in their numbers not only the national and religious elites of king and pope, ladies and abbesses, but also the civic and familial members of society, from mayors to artificers and servants.56 The architecture of the space functions with the text to create a landing site that elicits such connections, even as the environment of St Paul’s – audible to those in the Pardon Churchyard to view *Poulys Daunce*, and known to those familiar with the city – still furthered readers making such connections.

As readers confronted the *Poulys Daunce*, these details of the landing site of cloister and cathedral would have become incorporated into their apprehension as they read the work. In visuals and text, *Poulys Daunce* invites another form of identification and engagement from readers, that of embodied identification. Death, whose own embodiment is emphasized in the visual tradition of the *danse macabre* through its representation as a dessicated, animated corpse, is similarly shown reaching out to grasp the people it addresses, bridging the two bodies, and connecting them as a mirror reflecting present and future. A line from the ‘verba auctoris’, the author’s words to the reader, makes the invitation to readers that they identify with the individuals death leads explicit: ‘In this myrrour / euery man may fynde / That hym behouyth / to goon vpon this daunce’.57 The reader apprehending *Poulys Daunce*, in its images and texts, should apply it to themselves as if the work were a mirror that allowed them to see themselves and their end reflected in it. They are the bodies dancing with death; simultaneously, they are also the desiccated bodies of Death itself, a point made clear in one of the concluding stanzas of the *danse*:
Ye folk that loken / vpon this scripture
Conceyveth heer / that al estatis daunce
Seth what ye be / & what is your nature
Mete vnto wormys / nat ellis in substaunce
And have this myrrour / ay in remembraunce
Before your mynde / aboven al thyng
To all estatis / a trew resemblaunce
That wormes foode / is ende of your lyvyng. (Lansdowne MS 561–8)

Accordingly, *Poulys Daunce* invites readers to engage with the text in ways that cast light upon late-medieval views regarding how readers should participate with and interpret the work. The emphasis on the text as a mirror indicates that readers’ participation with literary works was conceived through invitations to self-identify with the work, both in its representation of individuals and more generalized bodies. This invitation to identify further nuances another reading practice previously referred to that also involved identification, that of immersion. That is, texts represented as mirrors invite immersion through connecting the reader’s self to the subjectivity represented in the text. The treatment of the subject in the work is, consequently, viewed as affecting readers’ own subjectivities because of their identification with the subject or subjectivities of the work.

Furthermore, Lydgate’s *Daunce Macabre* urges readers to participate by adopting multiple, overlapping subjectivities, in which they are both themselves, living and moving inexorably towards death, and themselves, in a sense already dead. In this way, readers apply the lessons of the *danse* to themselves in a visceral, immediate, and personal manner. In addition, as with other immersive texts, the multiplication of selfhood effected through participating in the mirroring of the text again suggests that medieval audiences engaged in their own practices for affecting and extending identity through accessories that, although not textual, represent another avenue for expressing the premodern posthuman.

Such application of text to self, leading to a distributed practice of subjectivities, is enhanced by the landing sites provided by St Paul’s: standing in the cloister, they not only face the *danse*, but as they read it they move around the tombs and monuments of the churchyard circled by the cloister walk. These landing sites provoke readers to extend their awareness beyond themselves, participating in its multiplicity by means of the proliferation of deaths figured in the text and visuals of the mural, and through
the monumental furnishings of the courtyard itself. The presence of the tombs and monuments consequently provide another set of landing sites available to readers, sites that provoke readers to participate in the message of *Poulys Daunce* by applying it to themselves, seeing all possible futures and professions that they might currently enjoy or to which they might have aspired, multiplying before them as bodies in death and in memory.

Although, again, none of these monuments survived Somerset’s demolition of the Pardon Churchyard in 1549, the tombs favoured by the city elites who arranged for these tombs and monuments in the Pardon Churchyard certainly took advantage of the ‘innovate[ive] and … fashionable designs’ offered by tomb-makers of the time.59 Among these designs would certainly have been included ‘a new and strikingly different type of sepulchral monument’ first built in England in 1424, a handful of years before the installation of *Poulys Daunce*: the transi-tomb, which depicted – like the *danse macabre* itself – a doubled mirror of the person buried, one image of them in life, and one of their decayed corpse reposing in death, skin stretched tight across a skeletal frame, often perforated by worms.60 The transi-tomb changed the traditional purpose of death monuments; rather than acting solely to represent the decayed body of the deceased, transi-tombs served a variety of purposes, one of which was to educate the living as a *memento mori*, reminding viewers of their own forthcoming deaths.61 In engaging with both tombs and text, readers of *Poulys Daunce* triangulate between three bodily landing sites: the bodies of the *danse macabre*, the bodies monumentalized on tombs, and the bodies of the readers themselves. The interrelationships between these three bodies effect architectural reading of *Poulys Daunce* as dependent upon both place and body. Reading *Poulys Daunce* in the Pardon Churchyard thus even more profoundly emphasizes the message of the work by the way the landing sites of the churchyard provided direct, immediate evidence of the readers’ end, and of the bodies they inhabited that were simultaneously both living and dead, salvation their only hope of survival. In all these ways, the work of landing sites evoked through the location of *Poulys Daunce* thus invites readers to extend their situational awareness beyond the frame of those artfully crafted boards painted with the *danse* to consider the surrounding environment itself and its contributions to their apprehension of the work. They, too, may see their ends in the same churchyard whose transi-tombs, along with the *danse*, depict the finality of death along with an embodied force.
focused on the decaying corpse. This is the work of the posthuman, in which the sense of self becomes multiplied and externalized through the technology of the tomb, the art of the multimodal text-and-image of the *Poulys Daunce*, the architecture of the churchyard and cloister walk, and the interactions among these landing sites and the reader.

Exclusive to the tradition of Lydgate’s *Daunce Macabre* most associated with *Poulys Daunce* is acknowledgment of the emotional response such work might engender in the reader who participates by applying this visual, visceral, bodily lesson to themselves: ‘Be nat afferd’, Lydgate consoles (577). With that phrase he both acknowledges an anticipated response and then seeks to transform it: ‘[T]rust trewly / ye shal nevir the sonner deye’, he adds; rather, the sight should cause the reader to ‘dreede’ sin ‘And vse vertu / prayer & almesse deede’ to ‘doon the bettir’ (579, 580, 583–4). By acting on the dread stirred by the *danse*, readers so moved are invited to conclude their reading with action bent on improving their spiritual state.

This situated awareness and the emotional movement that Lydgate invites readers to transform through action correspond to a similar interest in movement throughout the *danse macabre*, which, after all, is conceived through the expression of movement in dance. The intersection between its choreographic mode of expression and its architectural inhabitation have received attention from both Elina Gertsman and Seeta Chaganti, who note how the vertical movement of the *danse* (framed by the verticality of the cloister arcade and from the verticality of the upright figures of Death and the people whom Death invites to dance, which most likely were placed above the verses of their dialogues) exists in tension with its lateral movement of the dance (its sequential progression along the walls from figure to figure). For Gertsman this movement, fused with artistic traditions including literary and visual, invites readers to perform a ‘kinesthetic mode of looking’ at the *danse*.62 For Chaganti, the tension between the vertical and lateral movement of the *danse* create the ‘virtual churchyard that becomes an important part of the spectator’s experience’, and it is within this space that interchange between multiple forms – of bodies, of movement, of the temporalities of life and death – can occur.63 I would argue that the movement extends beyond looking by contributing to the performance of participatory reading. Furthermore, the virtualizing effects of movement, although in need of further discussion here, are not
the least effects that movement creates for the participatory reader of Poulys Daunce.

That is, while the placement of the dance along the four walls of the cloister walk not only effects virtual movement, it also effects literal, physical movement around the Pardon Churchyard that, nonetheless, does not end within the cloistered walk of the Pardon Churchyard itself: the Pardon Churchyard at St Paul’s was not only an end point in one’s travels, but was also a through-point, a space between spaces, through which readers passed as they entered and left the Pardon Churchyard. Reading concluded, business in the Pardon Churchyard concluded, readers had to move on, enter new landing sites, and that forward movement is further propelled and shaped by the invitation issued them in the final lines of the poem: readers should move themselves physically out of the space, mentally in their ‘mynde / to revolve and rede’ further (578) and, through these movements, engage in ‘vertu / prayer & almesse deede’ (583). The most logical place to begin the text of Poulys Daunce would have been on the wall adjacent to the door leading into and from the nave of St Paul’s, which was located on the east wall in the southernmost corner of the cloister.64 Following the typical progression of laterally organized murals in the direction of reading, left to right, Poulys Daunce likely began by that door on the south wall, leading to the west wall, north wall, then east wall and back towards the door leading into the nave. This layout would position readers to re-enter the nave upon concluding their reading, where they would then be situated to act on Lydgate’s advice to engage in prayer. Under such conditions, readers’ mobility as elicited by Poulys Daunce would lead them into the space where they could further the instruction begun by the work. Re-entrance into the nave, then, functions as a transition to a final landing site, a conclusion that propels readers from self-scrutiny to spiritual action.

In these ways, Poulys Daunce and the Percy family wall texts, one a work situated in a religious space focused on inspiring the reader to pursue spiritual improvement, one a work situated in domestic spaces focused on inspiring the reader to moral improvement, are similarly shaped by their architectural environments and the landing sites these environments provide to provoke a reading practice that responds to the details of space and place. This architectural reading also, like the other reading practices focused on making readers work, invites readers’ participation: not only the performance of visual apprehension, but the interactions
Participatory reading in late-medieval England

of mobility conditioned by that architectural context. The details of these architectural situations share a similar difficulty in reconstructing their finer details, but that difficulty does not disguise the impact location had on the participatory work of reading. The particular influence of place on wall texts of the *danse macabre* and the Percy family estates would generate different interpretive responses among readers, and generate distinct practices of apprehension, if situated in distinct places with their own particular architectural demands. Even in their manuscript contexts, they provoke a different mode of participatory reading.

Virtual tourism, mental pilgrimage and the wall texts

Mobile participation with Lydgate’s *Daunce Macabre* and the Percy estates does not end with the simple representation of text situated within architectural space across the Pardon Churchyard and the Percy estates. The manuscript versions of both works offer an alternative mode of participatory reading, in which movement aided by architectural references reconstructs what Chaganti refers to as a ‘virtual churchyard’ – and what might thus be termed in the context of the Percy wall texts the ‘virtual estate’. The virtual spaces – virtual landing sites – created through the manuscript versions of these works, however, differ markedly from the physical spaces of their architectural installation. Manuscript versions of the two works treat the spaces as exemplary, from which noise, traffic, labourers, servants, and all the details of quotidian experience are elided. In these contexts, movement and place, and the interactions between them, become both sanitized and virtualized.

Such treatment of movement in the manuscripts evokes intriguing connections between the virtualized movement they offer and today’s practice of virtual tourism. Such tourism – often by website, but also through videos and other media – selectively represents destinations in order to appeal to the desires of the target audiences. A basic example of virtual tourism is that provided by Google Earth, which a person can use to revisit sites from which they have been absent for years, or access panoramic imagery of a site to which they have never been. In particular, virtual tourism has been criticized for the way it lifts spaces ‘out of their local contexts’ for the purpose of providing luxury experiences to the ‘mobile elites’. Extending this reading to the manuscripts of Lydgate’s *Daunce Macabre* and the wall texts in Royal 18.D.ii suggests that the manuscripts’ versions of the works remove them
from their local contexts in order to re-map them onto landing sites designed for the benefit of a reading elite. Reading the two wall texts through manuscripts encourages readers not only to absorb their moral lessons, but to participate in virtualized movement that offers insight on the locationally distinct authority of the works. For Lydgate’s *Daunce Macabre*, the visceral instruction offered by the architectural surroundings of the Pardon Churchyard, with its tombs and monuments, is replaced by the guiding authority of the poet’s voice, which comes to dominate in the absence of the architecture and, in the longest version of the work (the version of Lydgate’s translation considered less connected to St Paul’s), through the inclusion of verses in which the translator, Lydgate, addresses his readers. For the Percy wall texts, the sanitized landing sites of the manuscript that situates the wall texts among other works invites readers to understand the political, social, and moral authority enjoyed by the Percy family. The collection of other texts in the Percy family manuscript also suggests an investment in this message of power and authority. As readers encounter the wall texts in manuscript form, removed as the texts are from the daily life of the estates where they were originally located, readers encounter the Percy family estates as a fantasy of the idealized household, characterized by the moderate lifestyle of labour, education, and self-improvement of the family.

However, the didactic function of *Poulys Daunce* and the Percy wall texts in manuscript also shapes the expectation that touring virtual, didactic architecture will result in moral improvement for readers. This differs from, as is arguably its consequence in modern contexts of virtual tourism, an enhanced sense of self-importance. These differing attitudes that emerge from contemporary analysis of the function of virtual tourism, and how this enables analogous critiques of the way the wall texts facilitate experience of the *danse* and the Percy estates, create tension between two modes of virtual experience (and the didactic work of moral improvement clearly intended as a consequence of absorbing the moral lessons of the wall texts). This tension gestures to culturally distinct expectations and practices that surround both virtual experiences: one functions to enhance the individual’s sense of specialness, and the other functions didactically to facilitate moral reflection and inculcate virtue.

These contrasts between the modern and late-medieval function of virtual tourism also evoke another experience more familiar to medieval audiences, the practice of mental pilgrimage. Medieval mental or ‘imaginary’ pilgrimage drew on pilgrimage literature in
order to provide more accessible experiences to wider audiences. Rewards might even be considered greater for those who travelled mentally as opposed to physically, for the mental travellers received their rewards for this spiritual labour from God alone.\footnote{Yet the continued popularity of pilgrimage in the later Middle Ages challenges the valuation thus placed upon mental pilgrimage. As Kathryne Beebe observes, ‘Pilgrimage in spirit perhaps drew basic inspiration from a fundamental ambivalence within Christian thought about the merits of going elsewhere to seek the holy, as opposed to seeking inner sanctity’.\footnote{When considering the manuscript versions of the texts of Lydgate’s Daunce Macabre and the Percy family manuscript in this light, the dynamic between the problems of mental tourism and the benefits of mental pilgrimage suggests a complicated role for the works.}}

Indeed, with specific reference to the Percy wall texts, the life of one of the Royal manuscript’s readers provides evidence to indicate that at least one person seems to have responded to the manuscript’s representation of the Percy estates and their moral messages as a virtual tourist, rather than as a mental pilgrim: Henry Algernon Percy, the ‘Lord percy’ for whom wall texts were provided in his closet (f. 202r–204r / Flügel 482–5), later the sixth earl of Northumberland. Placed within the household of Cardinal Wolsey, where he was bullied for fiscal imprudence, the young Percy developed a romantic attachment to Anne Boleyn in the early 1520s. This incurred the wrath of Henry VIII, directed at both son and father, and led to a severe chastising of Percy from the fifth Earl, who came to the Cardinal’s household to meet with his son. During this meeting the father condemned his son, saying, ‘thou hast allwayes byn a prowde, presumpcious, disdaynfull, And a very onthryfte waster’.\footnote{Throughout his adulthood, the sixth earl furthered the familial tensions apparent in this episode. His comment in a letter to Thomas Cromwell on the ‘debility and unnaturalness of those of my name’ indicates his own contempt for his family.\footnote{Childless and in the last years of his life, he seems to have sought to disperse the inheritance of his brothers by assigning grants of lands outside the family (ibid.). Finally, in the months before his death, he was unwillingly caught up in the Yorkshire rebellion known as the Pilgrimage of Grace and, while bedridden, said to be ‘weeping, ever wishing himself out of the world’, upon which occasion he handed over Wressle to Robert Aske, a leader of the uprising and a former servant of the Percys, and fled.\footnote{He died not many months after, in June of 1537, having refused to make financial provisions}}
for his widow. Such actions seem to be less the work of a magnate respectful of his inheritance and guided by the moral principles advocated in the wall texts, learning from them in the way that a ‘mental pilgrim’ might from a pilgrimage text, and more the responses of a member of the political and cultural elite of Tudor England, interested in securing his comfort and pleasures in ways analogous to those of the contemporary virtual tourist. Indeed, Henry Algernon Percy’s father, when commenting on his son’s pride, disdain, and wastrel ways, certainly seems to have expected that his son would have engaged with the wisdom of the wall texts on a much less superficial level.

Not only does this again broaden our understanding of interests that shape cultural production in later medieval England, but the connection also creates a parallel between religious sites and the way the wall texts of Royal 18.D.ii map the Percy estate, and the danse macabre evokes mental pilgrimage as its readers traverse the landing sites of the Pardon Cloister. Both the wall texts of the Royal manuscript and medieval pilgrimage activities focus on the spatialization of knowledge, in which particular modes of experience are tied to specific locations. As a pilgrim might travel to specific locations in Jerusalem, or within a cathedral marked by virtual pilgrimage stations, or through reading an itinerary or travel narrative to learn and refresh their knowledge of events in the life of Christ, so might the reader of the Royal manuscript traverse various sites of the Percy estates, gaining knowledge in each location. In effect, this parallel depicts a kind of nascent ‘heritage tourism’, in which the religious has been replaced by secular moral and ethical guides for living a virtuous life, and demonstrates how the texts serve as a ‘memoriall’ (210r / Flügel 495) to the family’s past values.

Considering the connection between mental pilgrimage and the two wall texts also points to further connections to the work of mental pilgrimage. John Ganim and Shayne Legassie, introducing an essay collection focused on exploring the notion of cosmopolitanism in medieval culture, through examples including texts that allowed readers to travel virtually to other places through reading them, suggest that ‘imaginative identifications’ between and among places provided means by which medievals evaluated their own identities and senses of belonging. What this suggests is that wall texts like those of Poulys Daunce and those of the Percy estates may have, through their localized, architectural reading, engaged readers similarly in both reflection on their identities and senses
of belonging. Readers of *Poulys Daunce* were reminded that they belonged to the Christian community of London, centred at St Paul’s; through the connection of *Poulys Daunce* with installations of the *danse macabre* in other locations – connections that were (for example) made explicit in Shirley’s and the second hand’s additions to Lydgate’s *Daunce Macabre* in the Trinity manuscript – readers were also invited to consider themselves part of a broader European community of readers drawn together by both their engagement with the *danse* and its universalizing subject matter. In a related vein, readers of the Percy wall texts in Royal 18.D.ii were invited to participate in a pilgrimage of the estates of this elite family in a way otherwise restricted to members of the household. Reading wall texts in manuscripts, then, in addition to reading them on site, could invite readers to perform fellowship across space, time, and place. As Ganim asserts of pilgrimage, wall texts could offer an ‘epistemological metaphor’\(^{75}\) focused on the performance of embodied, architectural reading that enabled readers to know themselves better, improve themselves, and join similarly minded communities of fellow readers. It is the virtual churchyard turned outward to encompass the whole of a shared culture.

**Conclusion**

Returning to the initial quote offered in Royal 18.D.ii regarding how the Percy wall texts present their architectural frame as a ‘hous’ that was ‘made … for contemplacioun’, the mnemonic function of the wall texts evokes as well their apprehension through architectural reading. The presence of *Poulys Daunce* and the Percy family wall texts emphasizes how architecture, as well as books, could be designed for reading, for speaking to and with their readers. Furthermore, the interrelationship between place and text indicates that, just as the materiality of manuscripts produces different effects on readers, and invites distinct modes of reading practice, so too could architecture, through the local, immediate details of the landing sites created through the interaction of place, text, and reader. In considering the interrelationships effected through texts situated architecturally, Heather Meakin argues for the adoption of the term ‘architext’. To analyse an architext is to recognize ‘that the texts and the space they occupy are interdependent on one another for their meaning; text is not simply applied to a neutral surface’.\(^{76}\) Not only is it that space and place are socially constructed, but how that space is designed and used
– from its passers-by to its wall texts – reflects that construction and consequently invites readers to participate in particular ways conditioned by this social context. Furthermore, the wall texts, in both manuscripts, on the Percy estates and on the walls of Pardon Churchyard at medieval St Paul’s, exemplify reading practices that cross the boundary of secular and religious reading. In this context, negotiating the architectural bodies of reader and text provides access to the shaping of the self, and reinvigorates the recurring late-medieval debate between active and devotional lives by blending the two into an experience that remains engaged with the world through domestic architecture, or through civic engagement, even as it leans on devotional practices. Such mobile reading through space echoes how, in the immersive reading practices of the previous chapter, movement in synthetic space provided a key means by which the agency of immersive readers could be enacted. Mobility, in physical architectural spaces, synthetic narrative spaces, and the virtual spaces provided through texts in manuscripts, fundamentally shapes the role of reading through its emphasis on the body as a conduit to interpretation. Reading is, in all these circumstances, an embodied experience, in which how the body moves and relates to space affects the interpretive work of readers.

This reliance on reading as an activity carried out through the ability to move through space also underscores how provision of the extracodexical wall texts throughout the estate at Leconfield, in particular, equates the house with reading and textuality, as if the estates were books themselves to be traversed by their embodied readers. Similarly, reading begun through participating in Poulys Daunce in the Pardon Churchyard could reinforce the social role of the cathedral in medieval culture as dedicated to reading, practised across the landing sites of the cathedral: in the churchyard in contemplation of death, and in the nave while gazing at stained glass windows that visually and textually related their own narratives, or in chapels at prayers. Not only does this allude to the culturally authoritative function of medieval literature, but the estates and cathedrals, like books, also become authoritative texts that invite people to read and learn from them, reinforcing their cultural authority. In creating textual, inhabitable space, extracodexical works such as the wall texts also suggest that reading evokes both learning and inhabitation, developing a resonance between immersion in the household or cathedral and immersion in a book. Such immersion entails identification of reader with the textual work and, in the case of the wall texts, the morals and values they
Participatory reading in late-medieval England

express. Furthermore, the way that landing sites function to extend readers’ bodily conceptions of themselves beyond their physical confines into the spaces in which they read highlights how reading functions as a technology of the self. To read, and particularly to read with the architectural body, engages the body and changes the body in relation to the space of reading. In this way, reading both enables readers of the extracodexical texts situated within architectural spaces to recognize the way that these spaces can inform, teach, and improve their inhabitants, and also invites readers to bring that architectural, textual, moral awareness with them as they move into new landing sites, religious and secular, public and private, embodied and virtual. Participatory reading involves bodies in action.

Notes

1 Wall texts have been little-studied before the recent material turn generated interest in these non-canonical, architecturally sited texts, which include not only works painted directly on the plaster of walls or ceilings, but on cloth hangings and tapestries. The past decade’s re-evaluation of the work of John Lydgate has been especially prominent in assessing wall texts and verses on painted cloths, as the verses of several poems designed for walls or wall hangings survive. Most relevant for the present essay is Seeta Chaganti’s work on the role of death in apprehending John Lydgate’s verses on the danse macabre situated in medieval St Paul’s Cathedral in London (‘Danse macabre and the virtual churchyard’. postmedieval 3:1 [2012], 7–26). Claire Sponsler addresses the close relationship between such works and writing when assessing the etymological links between ‘textile’ and ‘text’ (‘Text and textile: Lydgate’s tapestry poems’, in Medieval fabrications: dress, textiles, clothwork, and other cultural imaginings, ed. E. Jane Burns [New York: Palgrave Macmillan, 2004], 19–34). See also Jennifer Floyd’s discussion of Lydgate’s verses for the Amorours of London (‘St. George and the “steyned Halle”: Lydgate’s verse for the London Armourers’, in Lydgate matters, ed. Cooper and Denny-Brown, 139–64). Writing from the perspective of an art historian, rather than a literary critic, Linda Safran situates the wall texts of medieval Italy as a form of public discourse that functioned in conjunction with other spatial, textual, and decorative systems (‘Public textual cultures: a case study in southern Italy’, in Textual cultures of medieval Italy, ed. William Robins [Toronto: University of Toronto Press, 2011], 115–44). For a general introduction to wall texts, see Roger Rosewell (Medieval wall paintings in English and Welsh churches [Woodbridge, UK: Boydell, 2011]).

The wall texts from the Royal manuscript have been edited by Ewald Flügel, ‘Kleinere Mitteilungen aus handschriften’, *Anglia* 14 (1892), 463–97, and the manuscript is also available online in a digitized facsimile published by the British Library (at the time of this writing, accessible at [www.bl.uk/manuscripts/FullDisplay.aspx?index=11&ref=Royal_MS_18_D_II]; see f. 202r (Flügel, 1892: 482) for this specific quote. All other quotations from the text will be transcribed from the manuscript, and their citations will also include the page numbers to the corresponding passage in Flügel’s edition. Critical treatment of these verses has been of the passing sort; see, in addition to other sources cited above, A. S. G. Edwards (‘Middle English inscriptional verse texts’, in *Texts and their contexts: papers from the Early Book Society*, ed. John Scattergood and Julia Boffey [Dublin: Four Courts Press, 1997], 26–43, at 29–30), which situates the Leconfield and Wressle verses within the context of genre.

A petition of 1652–3 provides a twenty-one-year lease of ‘the house called the New Lodge in the Park called the New Park of Leconfield’ to Allan and Josselin Percy (Clay, 1896: 183). The description of the park is offered by John Leland in 1577; see the *Itinerary of John Leland the antiquary*, Vol. 1. 3rd ed. Ed. Thomas Hearne (Oxford: James Fletcher, 1768), 47.

Henry Algernon Percy, *The regulations and establishment of the household of Henry Algernon Percy, the fifth earl of Northumberland at his castles of Wressle and Leckonfield in Yorkshire, begun Anno Domini MDXII* (London: William Pickering), 299, 303, 442. This work is also known as the Northumberland Household Book. On the tradition of the ‘secret house’, see Girouard, *Life in the English country house*, 76, 78.

For an extensive, detailed analysis of how the space of a Tudor estate might be explored and analysed, see James M. Sutton, *Materializing space at an early modern prodigy house: the Cecils at Theobalds, 1564–1607* (Aldershot, UK and Burlington, VT: Ashgate, 2004).

John A. Goodall, ‘The great tower of Rochester Castle’, in *Medieval art, architecture, and archaeology at Rochester*, ed. Tim Ayers and
Participatory reading in late-medieval England

10 Leland, *The Itinerary of John Leland the antiquary*, Vol. 1, 55. At Leconfield, Leland had observed a related space, also called Paradise; at Leconfield, however, it is ‘a little studying Chaumber’, which housed the genealogy of the Percy family (*ibid.*, 47).

11 The latter is the more probable conclusion; although in the sixteenth century great houses began to include specialized spaces for books and reading, in earlier buildings, such as Caister Castle, constructed in the early fifteenth century at the behest of Sir John Fastolf, the bathing house formed part of the owner’s suite of chambers; at Caister Castle, it held about two dozen books (see Chris M. Woolgar, *The Great House in late medieval England* [New Haven: Yale University Press, 1999], at 63).

12 For a discussion on the types of instruments and music lessons supported by these proverbs, see Rob C. Webman, *The crisis of music in early modern Europe, 1470–1530* (New York and London: Routledge, 2005), at 155–6.

13 Fol. 200 is a singleton added into the quire, but Malcolm Parkes considers the scribal hand to be the same throughout these folios; see Malcolm B. Parkes, *English cursive book hands 1250–1500* (Oxford: Clarendon Press, 1969), pl. 15.

14 The most extensive analysis to date of the emblem is that offered by Arthur G. Dickens, ‘The Tudor-Percy Emblem in Royal MS. 18 D ii’. *The archaeological journal* 112 (1956), 95–99. For a more recent analysis, see Alexandra Gillespie, ‘“These proverbs yet do last”: Lydgate, the fifth earl of Northumberland, and Tudor miscellanies from print to manuscript’. *The yearbook of English studies* 33, Medieval and Early Modern Miscellanies and Anthologies (2003), 215–32, at 230–2.

15 In this case, ‘roufe’ most probably means ceiling, a not uncommon location for wall texts. These library proverbs have been argued to represent a debate between two voices offering opposing comments on the value of study, although they are not formatted as a dialogue in the way that the verses in the ‘garett over the bayne’ are, where the speakers are labelled each time the voices shift. For more on this argument, see Fiona S. Dunlop, ‘Mightier than the sword: reading, writing and noble masculinity in the early sixteenth century’, in *Representing medieval genders and sexualities in Europe: construction, transformation, and subversion, 600–1530* (Woodbridge, UK and Burlington, VT: Ashgate, 2011), 161–72, at 163–4. See Appendix C for an index of the wall texts’ first and last lines.

16 For more details about the verses situated in each of these spaces, see Appendix C.

17 This passage’s evocation of medieval mnemonic practices suggests a significant relationship between the wall texts and the embodied,
Reading architecturally

mobile reading depicted here. For more on locationally situated medieval mnemonic practices, see Mary Carruthers, *The craft of thought: meditation, rhetoric, and the making of images, 400–1200* (Cambridge: Cambridge University Press, 1998). The Royal manuscript’s linking of wall text to sites within the Percy family estates, in particular, evokes the ‘locational memory’ of which Carruthers writes (10); by emphasizing mobility not solely in the manuscript alone, but also through the estates themselves, however, the function of the Percy wall texts extends beyond that of the mnemonic into the realm of embodied shaping of the self.

A timeline of the spread of the *danse* is included as an appendix to the only critical version of Lydgate’s version of the text, *The Dance of

Trinity R.3.21 was compiled by two scribes, one known as the Hammond scribe and the other as the Trinity Anthologies scribe; it later belonged to the antiquarian John Stow. The portion of the manuscript containing the wall texts is attributed to the hand of the Trinity Anthologies scribe. For details on the work of these scribes in these and a related manuscript, see Linne R. Mooney, ‘Scribes and booklets of Trinity College Cambridge, manuscripts R.3.19 and R.3.21’, in Middle English poetry: texts and traditions; essays in honour of Derek Pearsall, ed. Alastair J. Minnis (Woodbridge, UK: Boydell, 2001), 241–66.

F. 278v, my transcription; a digitized facsimile of the manuscript is available online at http://trin-sites-pub.trin.cam.ac.uk/james/view-page.php?index=1374. The miniscule initial ‘h’ above the first line of the scribe’s headnote was clearly intended as a guide for the later illumination of a major capital, for which additional space was provided; this programme of decoration extends through the first twelve folios of the manuscript, but was never completed. It nevertheless indicates that both scribes involved in collaborating on the manuscript compiled it with attention to it as an important collection worth the additional time, effort, and expense to decorate.

51 Ibid., 109.

53 Ibid., 12–13.

56 Two versions of Lydgate’s poem exist, referred to as the A and B versions. Which figures are included in the *danse* differs between these (the A text, for example, includes passages on a lady of great estate, a monk, a usurer, a squire, a parson, a clerk, and a tregetour; the B text includes passages on a mayor, a canon regular, a doctor of law, a judge, a nun, an artificer, and a servant). Appleford argues that the B text is most likely the version that was installed at St Paul’s, as the inclusion of major, judge, artificer, and servant made the text more localized to figures more characteristic of London (*Learning to die in London, 1380–1540* [Philadelphia: University of Pennsylvania Press, 2015], 90–4).

58 Chaganti, in ‘*Danse macabre* and the virtual churchyard’, notes that previous discussion of this phenomenon demonstrates a Derridean
paradox, that identification is both individual and universal; for Chaganti, this emphasizes the focus on form in the *danse macabre* (11–12).

59 For the fashionableness of St Paul’s tombs, see Schofield, *St Paul’s Cathedral before Wren*, 137.

60 The best resource for the *transi*-tomb itself is Kathleen Cohen’s *Metamorphosis of a death symbol: the transi tomb in the late Middle Ages and the Renaissance* (Berkeley: University of California Press, 1973), quoted here from p. 1. Schofield, in *St Paul’s Cathedral Before Wren*, also discusses a transi-tomb originally located in the middle of the choir of St Paul’s, the tomb of Dean Colet, which survives only in an engraving made by Wenceslaus Hollar from 1657, at 137–8; further study of the fragmentary survivals of other monuments at St Paul’s is still wanting, until which the most comprehensive resource is the engravings by Hollar published in William Dugdale’s *History of St Paul’s* (London: Thomas Warren, 1658).

61 Cohen, *Metamorphosis of a death symbol*, introduction and chapter 1. The first English transi-tomb, that of Henry Chichele, the Archbishop of Canterbury, makes this educational role of the transi-tomb explicit in its inscription, which reads (in Cohen’s translation from the original Latin): ‘I was a pauper born, then to Primate raised / Now I am cut down and ready to be food for worms / Behold my grave, / Whoever you may be who passes by, I ask you to remember / You will be like me after you die; / All horrible, dust, worms, vile flesh’ (16, n. 9).

63 Chaganti, ‘*Danse macabre* and the virtual churchyard’, 17 and 22.

64 This door has been omitted in the map of St Paul’s that has seen the widest circulation, created by Tracey Wellman for Derek Keene, Arthur Burns, and Andrew Saint, eds, *St Paul’s: The cathedral church of London 604–2004*, 42 (fig. 20), and reprinted in Appleford, ‘The dance of death in London’, 288; Appleford, *Learning to die in London*, 85 (fig. 3). This map shows only one exit in the centre of the north cloister wall, leading from the Pardon Churchyard into the grounds of the Minor Canon’s residences, and omits any means for entering or exiting the cloister from the cathedral itself. Schofield, intimately familiar with the architectural evidence of the cathedral and its history, suggests that there ‘was probably a public entrance to the cloister, perhaps near Sherrington’s chapel’ outside the northeast corner of the cloister and abutting the north entrance to the nave (*St Paul’s Cathedral before Wren*, 172). A second door into Pardon Cloister, Schofield notes, was the one referred to in the arrangements for Prince Arthur’s marriage to Catherine of Aragon as a ‘little door against the Consistory that leadeth into the Palace’, from the west wall of the north transept, shown in an undated sixteenth-century plan of the cathedral known as the ‘Codrington plan’, which ‘led first to the
Pardon Churchyard’ (ibid., 145 and figs 4.4 [Codrington plan] and 4.108 [Museum of London Archaeology plan]).

Google’s most well-known virtual tour explores Abbey Road, https://insideabbeyroad.withgoogle.com/en. In a more serious example of the political and historical role virtual imagery like that provided by Google Earth can play: at the time of the writing of this chapter, satellite imagery was used by the UN to assess the state of the late antique ruins at Palmyra, much of which had been overtaken and demolished by the Islamic State (ISIS) in 2016.

Mimi Sheller, ‘Virtual islands: mobilities, connectivity, and the new Caribbean spatialities’. Small Axe 11:3 (October 2007), 16–33, at 23, 26. Mobile elites are not only those who can choose to visit the sites, however remote, but also those who will never visit the sites, but possess technology, such as mobile smartphone technology, enabling them to access such tours.

Kathryne Beebe, ‘Reading mental pilgrimage in context: the imaginary pilgrims and real travels of Felix Fabri’s “Die Sionpilger.”’ Essays in medieval studies 25 (2008), 39–70, at 43. See also Kathryn M. Rudy, Virtual pilgrimages in the convent: imagining Jerusalem in the late Middle Ages (Turnhout: Brepols, 2011).

Beebe, ‘Reading mental pilgrimage in context’, 58.

During or after the sixth earl’s lifetime, other readers of the manuscript left their marks between its pages: on f. 1r, the inscription ‘Kateryne Eggcomb’ may have been that of the sixth earl’s wife; the sixth earl’s nephew, Henry Fitzalan, twelfth earl of Arundel, inscribed his surname and motto on f. 212vol. After that, according to the British Library description of the manuscript’s provenance, it seems to have entered the hands of John Lumley, the first baron Lumley, who records it in a catalogue of his collection assembled in the year of his death, 1609.

John M. Ganim and Shayne Aaron Legassie, ‘Introduction’ to Cosmopolitanism and the Middle Ages (New York: Palgrave Macmillan, 2013), 1–20, at 3 and 6. See also Matthew Boyd Goldie, The idea of the antipodes: place, people, and voices (New York: Routledge, 2010), who argues that place-specific medieval practices, laws, and expression simultaneously produce a kind of ‘flatness’ through how they are shared across cultures (14).
John M. Ganim, *Chaucerian theatricality* (Princeton: Princeton University Press, 1990), 63. Ganim also emphasizes the performativity of the pilgrimage narrative, which he relates to theatricality. Relatedly, Claire Sponsler argues that the theatrical performativity of many late-medieval texts represents a medieval engagement with collaboration through readers’ and others’ performances of texts that counters modern notions of the singular author (*The queen’s dumbshows*, 1).

Reading temporally: Thomas of Erceldoune’s prophecy, Eleanor Hull’s Commentary on the penitential Psalms, and Thomas Norton’s Ordinal of alchemy

Thomas Hoccleve’s Dialogue with a friend, previously discussed in the Introduction as exemplifying a moment of participatory reading, incorporates several specific reading practices into the interaction described between Hoccleve and his friend. One of these participatory reading practices, which Hoccleve also represents in the poem, is the practice of reading temporally. Temporal reading emerges prominently in the poem when, in its prologue to ‘Jereslaus’ Wife’, to which his interventionist friend and reader prodded him to add the final moralization, Hoccleve describes how the friend had previously visited him. After a discussion of Hoccleve’s health, in which Hoccleve asserts he must return to study and writing to prove his recovered wits against the insults of a disbelieving public, the friend asks Hoccleve what the poet will write next. Hoccleve explains that he plans to take up the matter of a Latin treatise and translate it into English. The treatise ‘lerne for to dye / I-callyd is’, Hoccleve says, and explains that it might help others:

\[\text{yf that hym lyke / rede and beholde,} \]
\[\text{consyder and se well / that it is full hard} \]
\[\text{delay accompts / tyll lyfe begyne to colde;} \]
\[\text{short tyme is then / of his offencis olde} \]
\[\text{to make a just and trewe rekenynge.}^1 \]

The reader desirous of preparing well for death can, if he wishes, read Hoccleve’s work. Reading about death and the necessity to prepare for it by addressing one’s sins in advance helps prepare for the inevitability of the effects of time on human lives. Supporting this point Hoccleve explains that his own awareness of time presses upon him, for he has reached his mid-fifties and thinks often about how the sweetness of the world too easily turns to bitterness. In this passage Hoccleve illustrates several common notions of time
that developed over the course of the Middle Ages. He describes the effects of experiencing time that he conceives of as possessing an inevitable, linear force; he also addresses the circularity of time, which can predictably turn from sweetness to bitterness, and back again to sweetness. These two notions of temporality, as linear and as circular, had long affected medieval understanding of the repeating patterns of human history and experience, as discussed previously in Chapter 2 when discussing the historical nonlinearity John Lydgate crafted into the *Siege of Thebes*.

Other concepts of time, such as agrarian and biblical, permeated the fabric of medieval culture. Contrasts between sacred and secular, monastic and mercantile notions of time, the temporality of the zodiac, of agriculture, of the church, and more, have received much attention. These multiplicities of temporality, of course, witness a medieval awareness of, and interest in, how different ways of attending to time shape perceptions of the world. Time did not simply affect human experience, however; it influenced life in ways that intersect with medieval literary culture. In literature, time could also be manipulated and trivialized. This treatment of time also emerges in Hoccleve’s *Dialogue*, in which multiple social perceptions of temporality intersect and are represented as influencing both the writer’s and, potentially, readers’ experiences. Different ways of perceiving the value and practice of time also shape the treatment of multiple temporalities in the poem. Yet, despite the significance of time in late-medieval culture, and despite the attentiveness paid to different medieval schema for conceiving of time, and despite extensive study on the book of hours—a text defined by time—and its role in constructing a popular understanding of sacred time in the late Middle Ages, little attention has been paid to how late-medieval perceptions of temporality intersect with reading experiences, and in particular how readers’ engagements with time become reading practice. In this chapter, I draw on a range of texts across religious and secular genres to show how pervasively time becomes incorporated into reading experiences and participatory reading practice in late-medieval England. Different ways of engaging with and understanding time shape reading experiences and, consequently, textual interpretation, from the pace of reading to readers’ creation of narrative sequence to the reader’s personal orientation to historical time.

The workings of temporality have, as with the other reading practices discussed previously, also engaged the interest of critics, artists, and theorists working with digital media, alongside theo-
retical ways of understanding time, from the work of Stephen Hawking to that of Giorgio Agamben. Among critics of digital media, how the experience of time in and in response to digital media have gained the most attention. Such critics, seeking to apply concepts drawn from narratology, have sought to explain and analyse temporal phenomenal present in works like video games. Analysing such, contrasts of duration and speed framed through the work of Gerard Genette and others have occupied the primary focus of scholars of digital media. Similarly to how digital media scholars study the processes of materiality, such critics’ interest has focused on how digital media facilitate the manipulation of time through the properties of media. For example, ‘system time’ addresses how the permanency of the text can be affected by software and the formal materialities of a computer system, such as its processing speed. An example of ‘system time’ emerges through William Gibson’s *Agrippa (a book of the dead)*, which was stored on a floppy disk and famously programmed to erase itself. The act of auto-erasure imposes limits driven by the programming, the system, of the work. These limits affect the time within which the work is available for a reader’s perusal. Accordingly, system time contrasts with and can affect ‘reading time’, which refers to the temporal availability of a text to readers. An illustrative example of constrained reading time is that exemplified in William Poundstone’s ‘Project for Tachitoscope [Bottomless Pit]’, which flashes image and text that disappear and are replaced within fractions of seconds. Both system time and reading time intersect in Gibson’s and Poundstone’s works in ways that require readers to adjust the duration of their reading practice to respond to the limitations imposed by the reading and system times of these works.

Accordingly, digital media critics often view the treatment of reading time as an intrinsic property of types of media. This approach emphasizes fundamental differences between, for example, the experiences of reading time in digital and print media, since their formal materialities differ. As Markku Eskelinen explains, ‘If system time and reading time were to be applied to print narratives, they would usually have both unlimited system time and unlimited reading time, because they are supposed to be permanent and there are no temporal limitations set to their reading’. Eskelinen’s influential argument treats the media form of a work as inalterably affecting reading experiences. This view, however, overlooks how social use can affect reading time both in print, manuscript, and digital media. Consequently, while such
criticism usefully directs attention to the qualities of a work that affect the reader’s experience of and engagement with temporality, it also invites further scrutiny of time, particularly for how the cultural and historical contexts of media affect temporal experiences and engagements.

One example of how such issues may be considered involves returning briefly to examples of the reading practice attended to in Chapter 2, nonlinear reading. As previously discussed, when medieval writers and modern critics explicitly address how nonlinear reading functions, they often link it to the formal materialities and structural considerations of textual organization. The division of a work into lexia, such as chapters or parts, can facilitate nonlinear reading practices driven by the readers’ association of passages of interest to themselves. Such associational reading has been related to time in the context of hypertext media, as critics suggest that nonlinear reading facilitates access to, and intake of, information in ways characterized as shallow and swift, as indicated by the dominance of the terminology used to describe hypermedia reading as ‘browsing’ and ‘surfing’. The shallowness of engagement with information was compensated for by the speed that allowed readers to apprehend greater amounts of information; hypertext media enable speed through the division of text into lexia and the provision of means for easily connecting one lexia to another via hyperlinks. For medieval writers, similarly connecting time to nonlinear reading, swiftness and shallowness are the opposite of the results achieved by nonlinear reading. For example, considering the *Orchard of Syon*, it is noteworthy that the translator links negotiation among textual nodes to the ability to spend ‘o tyme in oon, anobir tyme in anoþir’ (1), which helps promote ‘bisye & ofte redyng’ (421). To read nonlinearly offers readers the opportunity to choose how and where to spend their reading time, and increases the frequency of reading practice. In the perspective of medieval writers, nonlinear reading, when practised with temporal mindfulness, affects both reading frequency, reading pace, and textual navigation: one structural and two temporal aspects of reading that intersect to produce particular cognitive results. ‘Bisye’ reading can be developed through reading multiple passages in whatever sequence the reader finds useful, a change to reading pace reliant upon textual organization; ‘ofte’ reading develops more easily when the text can be dipped in and out of at will, when passages can be read independently and placed in associational context with each other. Yet rather than producing the shallow apprehension of
‘surfing’, this temporal practice of nonlinear reading helps make the reading experience deeper and more productive for the individual. Participatory reading can thus involve readers manipulating their temporal practice in order to enhance a deeper, customized engagement with the text.

Reading as temporal manipulation

By moving from lexia to lexia often and busily, readers manipulate the temporality of their reading practice in order to effect change in apprehension of a text. In the Orchard, this practice of temporal reading is represented as relying on adjustments to reading pace and textual sequence in order to customize the text to the individual reader’s needs and interests. Yet temporal reading does not promote only the ability to customize reading pace and frequency in order to achieve ‘bisy’ reading. An interpretation of how temporal reading functions that contrasts with the view of the translator of the Orchard emerges in the Middle English translation of the Pseudo-Augustinian soliloquies. In it, the translator notes instead that temporal reading offers an opportunity for refreshment of the reader. To this translator, the divisions of the text facilitate readers’ negotiation among passages, so ‘that where it lyketh hym he may beginne and also ende, ne lest often repeticion of one thing schulde make hevenesse’. By moving among lexia according to preference and interest, readers may avoid the boredom of repetition. Changing one’s reading pace, frequency, and sequence in order to dwell over a passage through its rereading, in this context, would be viewed as a problematic practice enhancing boredom, and thus counter-indicated by the need to keep the reader’s attention engaged through encounters with fresh material. This perspective demonstrates how temporal reading could be viewed not only as a practice enhancing customization, but also as a practice of attentiveness. Temporal manipulation of reading pace and sequence could make apprehension of a text feel lighter or deeper. Neither the translator of the Orchard nor that of the Soliloquies suggests a specific amount of time be spent on reading; rather, what they both emphasize is that readers’ temporal manipulation of reading practice shapes the subjective and affective experiences of reading and, consequently, textual interpretation.

The differing approaches of these writers to temporal reading, and the way these approaches contrast with modern critics’ views of the effects of reading on the temporal engagement with a text,
suggests that temporal reading is also a culturally constructed practice whose effects may be bound to a particular place and time. That nonlinear reading is today viewed as ‘swift’ and ‘shallow’ may say more about what scholars and users alike expect from reading digital media, and how we choose to read digital media, than it says about any transhistorical continuity about practices of nonlinear reading. Treatment of the same reading practice in different cultural and historical contexts should not be viewed as consistently producing the same results, which is to view the effects of a reading practice as predictable and constant over time. Instead, the same practice may produce different results because reading develops through culturally contextualized training and practice.

Yet some aspects of reading practices can be identified as similar across time and cultural difference. Through temporal manipulation, medieval and modern readers gain another way to interact with their texts and exert agency over the reading experience. As medieval readers chose how to attend temporally to the text, how much time to spend on a passage, and whether to reread one or briskly move on to another passage, they exerted agency to determine what aspects of temporal reading would most benefit their apprehension of the work. At the same time, however, as with other practices of participatory reading, writers advocating temporal reading practice did not view such readers as setting the agenda for their reading experience. Instead, writers treat their stated goals for the text, or the text’s aims as determined by its genre, as predetermining readers’ agendas and circumscribing the use of their agency. Readers should exert choices insofar as their choices support the effective interpretation of the work as stated by the writer or translator, or as implied by the genre of the text. Temporal reading, in this light, serves to make achieving the agenda set by a text or writer more likely and more accessible. That temporal manipulation becomes part of the work of participatory reading demonstrates how writers viewed time as a significant aspect of reading experiences, and the ability to affect time as crucial to readers’ participation, although reading temporally does not change readers’ abilities to affect the agenda set by the text or writer. For medieval writers, to read is to comply with the aims of the text read.

For readers, temporal reading under the guidance of writers’ proleptic instructions enabled a mode of reading that facilitated textual customization and enhanced attentiveness and engagement. While writers also seek to predetermine readers’ responses by
treating temporal reading as guiding affective responses to the text, temporal reading nonetheless requires the participation and compliance of readers, who can also choose to concentrate on whatever other aspect of interpretation suits them; furthermore, that writers represent the results of temporal reading as somewhat mutable may also indicate that its results might not be fixed, but could be adjusted to suit the goals of readers. That is, while texts like the Orchard of Syon that are designed for nonlinear apprehension can facilitate temporal reading by making a text more accessible to reading characterized by dwelling either briefly or lingeringly over short passages, these texts cannot make other reading practices inapplicable. That medieval writers nevertheless chose to advocate for temporal reading demonstrates how they viewed it, in its multifaceted application, as significant to the work of understanding a text. It made a difference to them that readers should approach a work in a particular mindset, and with the expectation of achieving particular results from their reading; writers turned to temporal reading to create a practice that would help achieve those results.

Temporal manipulation in these ways is not exclusive to medieval reading practice alone. Temporality, for example, also emerges as an aspect of literary culture through the work of textual composition: to ‘abbreviaten’ or ‘abreggen’ was viewed as diminishing both length and time, as explained in the Middle English translation of De re militari: ‘Pese bookes of werre craft … ben breueliche y-gedered oþer schortliche abreged out of auctors apreued’. Abridgement is an activity that can be both ‘brief’ and ‘short’, which unites perceptions of length and time. Linking length and time to textual composition further suggests that temporal manipulation functioned as a feature not of reading alone, but of both writing and reading. This view complicates Eskelinen’s notion of ‘system time’ by demonstrating how temporal manipulation may not only emerge from the formal qualities of an object, or through the experiences of a reader, but also, in the context of medieval literary culture, through the processes that writers, scribes, and readers enact through the practices that define them. The temporal manipulation of the length of the text also impacts what Genette refers to as ‘pseudo time’, which is the amount of text used to describe an event. In other words, medieval writers and scribes who altered the length of a text engaged in a process of altering the temporality of a text, even as readers also manipulated temporal experience through the process by which they apprehended a text. Both writing and reading offered opportunities to
practice temporal participation with a text, demonstrating that temporality in medieval literary culture extends past the simple notion of narrative temporality to a much more complex and multifaceted perception of time.

Considering that time is not simply an aspect of narrative craft, but of readers’ experiences, and of scribes’ and writers’ material, formal engagement with and contributions to a text invites further consideration of how time might be manipulated with consequences for readers’ apprehension of a work. Abridgement introduces an example of how scribal emendation of a text could affect reading time, but reading time could also be effected through occasion and performance. The example of John Lydgate’s ‘Soteltes’ discussed in the previous chapter exemplifies a text whose reading time was limited to the duration the subtleties entered the hall at Westminster at the end of each course of the coronation feast, and concluded when they were consumed or taken away in order to introduce the next course or end the feast. Ephemerality works like the ‘Soteltes’ thus impose limitations on reading time that are not responsive to the desires of readers to linger or not, but are, rather, responsive to the materiality of the text and the conditions of the occasion. Ephemerality may affect temporal reading in ways not restricted by events. For example, in the Percy family wall texts, the natural rhythms of the household create effects that would shape the way readers assess the work’s temporality. The verses providing proverbs on the subject of music located in the garret above the New Lodge would be apprehended differently if read just before a music lesson as opposed to after it, or would be read differently again during seasons or years without such lessons taking place. The use of space thus conveys its own temporal effects on a work, effects which can be ephemeral even when not tied to a specific event. Ephemerality constrains reading time in a way that, as Eskelinen observed, the printed (or manuscript) text may not – with some exceptions.

One exception to the constraints on temporal reading imposed by ephemerality emerges through a work’s remediation into another format. Such affected the Percy family wall texts and Lydgate’s ‘Soteltes’ when the verses were included and resituated for readers in manuscript contexts. There, the imposed, event- and space-orchestrated temporal constraints disappear, in the sense that readers can choose to extend or shorten the experience of reading them according to their own wishes. Nevertheless, maintaining the ‘Soteltes’ verses within the framework of the banquet suggests that
limits on reading time can be constructed virtually, if not materially. This virtual representation of temporal limits is evoked by the location of the verses within the framework of the banquet: there, they are represented as if still part of a temporally finite experience. Providing the framework of the occasion does not contextualize the content of the verses alone; it also evokes the temporalities, including the temporal limits, of the occasion in the act of conveying the verses to readers. Preserving the temporality of occasional verse, however, imposes changes upon it. Emphasizing the temporal limits to the verses in their occasional context can evoke a sense of urgency applied to subsequent readings of the work, even as it also emphasizes connections to the past event, thus imparting a gloss of continuity and stability to the work’s message.11 Such treatment of time may be supportive of the message of the text in its original presentation. Yet this treatment of time does not belong to the original work, but emerges from its new context. Remediation of the text thus remediates its temporalities as well, even under the guise of maintaining the work’s previous temporalities. Accordingly, reorganization of a text by the application of new schema, such as a work’s re-organization into new chapters, can create new temporal effects. Consequently, examining a text for its engagement with time may require considering, for example, how manuscript witnesses represent various schema for dividing and organizing a text, as each schema may differently affect temporal manipulation.

Reading as participatory temporality

For medieval readers, temporal manipulation does not represent the only way time becomes intertwined with the work of reading. Indeed, temporal manipulation can be seen as contributing to a practice of reading that might more broadly be considered as ‘participatory temporality’. This term draws on the critical framework of participatory materiality as discussed in Chapter 3, and also extends theorization of temporalities encountered in digital media. In digital media studies, Raine Koskimaa has elaborated on narratological understanding of temporality and contrasted it with assessments of temporality by scholars of digital media to distinguish four levels of temporality in narrative digital texts: user time (which is the time a person spends reading a text, and synonymous with reading time), discourse time (the time of the narrative discourse), story time (the time the narrative events take
place within the synthetic space of the narrative), and system time. Koskimaa notes that multiple levels of temporality can be engaged simultaneously, for system time operates in the same moments as story time and discourse time; this convergence of temporalities ‘merge together in a novel way’ in digital media. Such merging of temporalities suggests a particularly interesting development, for it indicates that distinct modes of temporalities may, in intersecting, affect each other—and affect even the user or reader.

Although the convergence of multiple temporalities may take place differently according to particular types of media, such convergences are not unique to digital media. For example, consider the widespread and influential metaphor of the book as flesh of Christ, previously mentioned as an example of the intersection between materiality and embodiment in reading practice. The metaphor also possesses a temporal functionality. One of the more descriptive uses of the metaphor is provided by Richard Rolle in a passage on devotional reading. Rolle writes:

[S]wet Jhesu, þy body is lyke a boke written al with rede ynke; so is þy body al written with rede woundes. Now, swete Jhesu, graunt me to rede upon þy boke, and somewhate to undrestond þe swetnes of þat writynge, and to have likynge in studious abydynge of þat redynge.

While Rolle does not explicitly address time, the metaphor he deploys here nevertheless evokes several temporalities that converge through it. First, calling attention to the nature of the book as flesh and body invites readers to consider the formal, material temporalities of the manuscript, which was once a living animal possessed of its flesh, but has since become remediated into the book. Next, comparing that manuscript body to the wounded body of Christ evokes for readers the historical temporality of his life. Other temporalities that converge through this metaphor are discourse time and reading time. A final temporality is that of story time: while Rolle does not relate a fictive narrative, he nevertheless narrates a micro-event, that of the development of his devotional practice in response to the book as body metaphor, which begins with the explanation of the metaphor, transitions into the development of a meditative practice based upon it, and anticipates the enactment of that practice.

Only one of these temporal levels, user/reading time, specifically examines reading experiences, such as that of temporal manipulation. Yet the convergence of other temporalities intersects with
reading time in ways that affect interpretation. This convergence marks the capacious medieval *now*, the all-encompassing sense of the present that asynchronously enfolds the past. This convergence also relies on the act of reading: to understand the book as body metaphor, readers recognize the convergence of temporalities as they consider their own relation not simply to their devotional practice alone, but also to the temporalities of that practice. To read the book as body metaphor, as described by Rolle, necessitates that readers recognize the various temporalities that converge in and through the metaphor, and interpret the metaphor through that understanding. The way the metaphor unites embodiment with temporality further suggests that embodied reading may always also be temporal reading, even when the temporality may not be emphasized in the text read. That is, embodiment is temporally contextualized as the body itself exists in and is subject to time. This engagement with time comes to the forefront of readers’ attentions when, as Hoccleve illustrates above, a text connects awareness of time to its effects on the human body. To engage in embodied reading consequently also evokes the temporality of the body that characterizes medieval human experience.

Thus, as with materiality, and as with the temporal manipulation of writing discussed above, convergence of such temporalities requires readers to engage in temporally structured processes as they read. In effect, these processes contribute to how readers perform and thus understand temporality. Accordingly, participatory temporality offers a comprehensive term useful for considering both how temporalities converge as part of the reading experience, and also what the convergence of those temporalities achieves. Accordingly, considering participatory temporality involves assessing how temporalities function as processes with which the reader participates. The remainder of this chapter will discuss three fifteenth-century works, one a secular, prophetic poem; one a devotional work translated by Dame Eleanor Hull, a *Commentary on the penitential Psalms*; and the third marking a return to Thomas Norton’s Chaucerian treatise on alchemy, the *Ordinal of alchemy*. Assessment of these works will demonstrate how participatory temporality functions across late Middle English literary genres as a widespread reading practice that shapes readers’ work.

Prophecies cluster around the figure of Thomas of Erceldoune, a thirteenth-century Scots poet; many of these prophecies, few if any of which can be attributed to the historical figure of Thomas, were collected in *Thomas of Erceldoune’s prophecy* following its initial
romance-styled prologue that explains Thomas’s rather fantastic experiences. This prologue and the prophecies form *Thomas of Erceldoune’s prophecy* survive imperfectly in three fifteenth-century manuscripts and one from the sixteenth century, and in shortened fragments in several others. Two of these manuscripts include the text alongside other prognosticative or prophetic works, reflecting the compilers’ strong interest in history and temporality. In *Thomas of Erceldoune*, the story of the prologue follows Thomas as he rests beneath a tree on a May morning. He then sees a richly dressed lady riding nearby, whom he initially takes to be Mary as Queen of Heaven despite the demurral of the lady, who says she comes from elsewhere. After Thomas pressures her into having sex, she takes him with her under the hill to her land, where Thomas spends what seem to be three days, only for the queen to explain that three years have passed. She then returns him to the tree where they first met, and at his importuning grants him a gift and shares five prophetic pronouncements. These five pronouncements include multiple prophecies, and form the subjects of the second and third parts of the poem. The work is thus deeply engaged with the multiplicity of time and temporalities people experience. Its prophecies, in particular, require readers’ temporal participation in order to effect interpretation.

How the prophecies elicit readers’ temporal participation begins with the narrating perspective of the poem. Identifying the speaker requires readers to immediately assess the chronology of the poem, work that the shifting identity of the speaker complicates. All witnesses to the prologue of *Thomas of Erceldoune’s prophecy* begin in the first person, using ‘I’ to summarize the subject matter of the poem. From the mid-fifteenth-century Lincoln Cathedral Library MS 91, compiled by the Yorkshire gentleman Robert Thornton in his northern dialect of Middle English, the narrator explains, ‘Lystyns, lordyngs, … I sall $\hat{\varepsilon}$ow tell al strew a tale / Als euer was herde by nyghte or daye’, which shall include his telling of ‘Batells donne sythene many a ȝere; / And of batells $\hat{\psi}$at done sall bee’. Such a conventional opening invites identification of the narrator as a poet providing a traditional oral performance of the work, whose written form includes those legacies of the oral tradition. This first-person becomes attributed to Thomas explicitly not many lines later: ‘Als I me went’, and sat under the tree, ‘I herde $\hat{\psi}$e jaye … als I laye’. Thus the initial ‘I’ of the poem becomes, for the reader of the text in manuscript, retroactively identified as that of Thomas. Thomas may occupy the role of the performing poet,
which would represent the poem as not only about his experience, but also as relating his experience through his own authoritative voice. That identification thus requires readers to locate the poem and its speaker in time, requiring interpretation of the poem depending upon reading temporally.

As the speaker’s perspective does not remain constant throughout the prologue, its inconsistency invites further temporal work on the part of readers. Only a few dozen lines after the first-person description of Thomas beneath the tree, the perspective shifts to third person as readers learn that ‘Thomas laye’ and ‘He sayd’ (73, 75). This shift may represent malleable, multiple narratorial identity, or it may represent the autographic textual voice. Regardless of the view of the narrator that one adopts, however, the narrating perspective represents two temporal moments. The third-person narrator relates Thomas’s activities as if they occur in the present, creating a sense of proximity and immediacy; the first-person narrator depicts events viewed as past developments on which the first-person narrator reflects. This shifting perspective adds a degree of mobility to the temporalities of the poem. The temporal mobility implied by the shifting perspective of the narrating point of view thus challenges readers to orient the poem temporally in relation to themselves. Is the poem contemporary to a reader, or from the recent past, or from further back in history? As the subject matter of the poem focuses on prophecy, determining its temporal orientation relative to readers is a necessity.

Reading temporally may seem like a typical reading practice that all readers engage in while reading any text. Yet not all texts require this work. For example, those set in the present moment, such as the prologue to the Canterbury Tales, do not require readers’ temporal orientation until factors external to the text, such as changing linguistic practice and religious culture, make the present-day setting of the poem a historical artefact to its readers. Thus, while reading temporally may be a necessity for any reader engaging with a text outside of its original historical context, temporal reading is only a necessity for some readers encountering the text as its initial and intended audience. In such cases, temporal reading can be – as Thomas of Erceldoune’s prophecy demonstrates, along with the other texts to be discussed below – planned for and crafted as an aspect of the text designed to elicit readers’ participation in order to promote particular ways of apprehending the text, interpreting it, or otherwise participating with it.
In the case of *Thomas of Erceldoune’s prophecy*, readers temporarily orienting themselves to the poem engage in one mode of temporally interactive reading practice. Readers’ different temporal orientations lead to different ways of interpreting the work and its topicality. In other words, viewing the poem as contemporary suggests that some prophecies are more likely to be as yet unfulfilled; a poem situated with greater temporal distance suggests that readers might expect some prophecies to have been fulfilled already, and some perhaps yet to be fulfilled. Readers’ temporal participation thus shapes interpretation. Such reliance upon readers, as with other reading practices discussed previously, seems not to have suited all writers equally well. For example, a fifteenth-century prophecy attributed to Merlin in Trinity College Dublin MS 516 clearly indicates uncertainty about how readers will orient themselves temporally to the prophecy. This uncertainty perhaps arises because the character of Merlin would have been recognized as a character of the past, temporally distant, which could then have prompted readers to perceive the prophecy itself as applying to a temporally distant past. Yet attribution of the prophecy to Merlin clearly added to its authority, and provided a context and authority worth maintaining. Accordingly, to address this problem and still encourage readers to orient the prophecy to their present moment, the writer of the Merlin prophecy adds the year. The poem begins with phrasing echoed by other versions of the prophecy, ‘When lordes wille is londes law’, then concludes the stanza with, ‘Then schal the lond of Albyon torne into confusioun! / A M CCCC lx and on, few lordes or elles noone’. When the law of the land is the will of its lords, the land will fall into confusion; by 1461, few lords stand against such calamity. Adding the date diminishes the need to rely upon readers’ ability to orient the poem temporally to themselves. Supplying the date explicitly encourages application of the prophecy to the readers’ contemporary political situations. Consequently, the presence of the date in the Dublin MS 516 version of the prophecy indicates the significance of the absence of dates in other works. Undated prophesies rely on other cues to encourage readers to orient such writings temporally, and rely to a greater degree upon readers themselves.

How readers temporally orient the poem consequently shapes expectations regarding the focus and applicability of prophecies. As a result, by challenging readers’ temporal orientation through its varying and multiple narratorial perspectives, *Thomas of Erceldoune’s prophecy* begins to make readers work to locate
it temporally in history. It also begins to develop expectations regarding the prophecies, even as this challenge of temporal orientation underscores the slippery multiplicity of time in the text. That such temporal orientation relies on readers’ efforts underscores the participatory function of temporal reading. As previously discussed in the context of reading materially, what a reader does, and how a text proleptically invites the application of a reader’s work, functions as part of the process that enacts the participatory nature of the reading practice. Temporal participation is cued by the text, but occurs through the actions of readers that affect interpretation.

This emphasis on temporal participation continues throughout the text in its provision of the prophecies themselves. Although many of the prophecies describe recognizable historical events, they do so – as is conventional for prophetic writings – allusively. These allusions require work on the part of the reader to sequence, thus situating further temporal participation as a prelude to understanding the subject matter and relevance of the prophecies. Furthermore, recognizing the events referred to in the prophecies as historical occasions that have already transpired again points to the processual function of temporality in the poem, as readers must distinguish them from forecasted events that have not yet occurred. Readers’ understanding of these aspects of the poem becomes further complicated by the presentation of the prophecies in temporal clusters that, within each cluster, proceed chronologically, even as the clusters themselves are not presented in chronological order.

The first prophecy related by the queen to Thomas exemplifies how the presentation of the prophecies could influence readers’ temporal performance. At the start of the second fytt, after the queen presents Thomas with the gift of truth-telling, she also provides him with a marvel, a prediction, at his request. At the conclusion of the prediction, she states,

Thomas, herkyne what I the saye:
Whene a tree rote es dede,
The leves fadis ḷane & wytis awaye;
& froyte it beris nane ḷane, white ne rede.
Of ḷe baylliolfe blod so sall it falle:
It sall be lyke a rotyne tree;
The comyns, & ḷe Barlays alle,
The Russells, & ḷe ffresells free
All sall ḷay fade, and wyte awaye.
The provision of family names make the historical allusion of the queen’s prophecy readily identifiable to readers familiar with the Second War of Scottish Independence. The resolution to the First War (which lasted from 1296 to 1328) had left various families denied access to the lands in Scotland that they viewed as their own; through allegiance with England, they pursued their claims in what became the Second Scottish War of Independence, which began in 1332 and lasted until 1357. These families included that of Edward Balliol, who claimed right to the throne of Scotland, and led the families of his faction – which included the Comyns, Frasers, and Barclays and were known collectively as the Disinherited – in the first of several campaigns in Scotland.21 This exemplifies one of the more recognizable temporal allusions in the poem that readers have to decipher in order to understand the implications of the prophecies.

This prophecy centres on events from the first to second quarters of the fourteenth century, and focuses particularly on events that took place in 1333: the failure of Balliol’s party when confronted with forces supporting David the Bruce’s hold of the throne.22 Next, the queen’s second prophecy discusses the Battle of Halidon Hill, also in 1333, a bloody defeat for the Scots. She then moves back temporally to reference the 1298 battle at Falkirk, in which Edward I of England defeated Scots led by William Wallace. After Thomas importunes her again, the queen moves forward temporally to the Battle of Bannockburn in 1314 during the First Scottish War of Independence, and after a few more events from the First War, on to the partial successes of Edward Balliol in 1332 during the Second War. The sequence of prophecies thus moves from events of the Second War to events of the First, after which follow earlier events from the Second War that precede the previously referenced Second War events. The poem concludes with prophecies about the future, extending even to an allusion that could be interpreted as referring to the return of King Arthur, unifying all Britain.

This organization of events within the prophecy clusters the past not as ordered, but as intersecting and branching in a rhizomatic network, and further represents the future as malleable and subject to interpretive ambiguity.23 No one prophecy is presented as providing a single key to unlocking the future; no single event dominates and imposes a linear narrative to history. The text thus invites readers’ participation by providing them with the prophecies as temporal puzzles. In solving them, the
reader orients the relation between past and future events, and further orients himself temporally: what is future for the poem’s Thomas the Rhymer and the Fairy Queen becomes past for the knowledgeable, alert reader. Such work in reading emphasizes again how late-medieval writers anticipated readers on whose interpretive labour they could rely. Such work also suggests how the text might have interested its readers. Robert Thornton, gentry landowner and copyist of the Lincoln Cathedral manuscript copy of *Thomas of Erceldoune’s prophecy*, may well have turned to the poem for reminders of the recent past that he could recognize and, in considering them alongside the future prophecies, assess how he might respond to developments in the tense political situation in Yorkshire and Scotland of the mid-fifteenth century.24

Furthermore, the presentation of the intermixed sequence of past events followed by predictions about the future creates an impression of social and political chaos. Identifying and contextualizing the past events referred to in the prophecies from events that had not yet occurred requires readers’ temporal participation. In effect, readers of the prophecies have to assemble mental chronologies of the events in order to draw order and meaning from chaos. In doing so, they distinguish past events from future events, which they can then interpret in ways consonant with their individual political ideologies. Through temporal participation with *Thomas of Erceldoune’s prophecy*, the reader emerges as a figure whose efforts bring order to history and clarity to time. Participation through temporal reading positions readers as both vehicles for and agents of temporality.

In these ways, reading temporally in late-medieval England involved temporal manipulation, the assemblage and orientation of the reader with regard to differing temporalities, and the convergence of multiple layers of time that readers engaged with and which shaped how readers interpret the work. Such aspects of temporal reading become explicit both in works that address time in relation to reading, and in works whose focus specifically involves time. Examples of these modes of temporal performativity can be identified in the descriptions of reading practice included in the *Orchard of Syon* and the *Pseudo-Augustinian soliloquies* described above, and in more literary works such as *Thomas of Erceldoune’s prophecy*. Aspects of temporal participation may also affect reading experiences in different ways, as temporal manipulation of the sort discussed in the *Orchard of Syon* and the *Pseudo-Augustinian soliloquies* seeks to shape affective responses to the work read,
Participatory reading in late-medieval England

While temporal orientation in *Thomas of Erceldoune* influences how readers orient themselves and the texts they read in relation to multiple conceptions of time. Such modes of temporal participation can also be identified in works less explicitly engaged with time or the practice of reading as these, and across the divide of devotional and secular literature. Examples of texts that demonstrate further engagement with temporal performativity these ways include Eleanor Hull’s *Commentary on the penitential Psalms* and Thomas Norton’s *Ordinal of alchemy*. A brief description of how each text represents temporal participation will contribute to a more nuanced picture of its workings as a reading practice, and demonstrate how temporal reading can intersect with other participatory reading practices previously described, such as nonlinear reading.

Eleanor Hull translated her *Commentary on the penitential Psalms* in the 1420s, when she, widowed, was living at least part of the time at Sopwell Priory, a house of nuns dependent upon the powerful and influential Abbey of St Albans. Her *Commentary* survives in a single manuscript collected and owned and partly copied by Richard Fox, the steward of St Albans. Following after the *Commentary* is Hull’s translation of the *Meditations on the days of the week*. There, Hull demonstrates her interest in and sensitivity to temporal participation by addressing readers’ temporal manipulation. Expanding on and altering the sense of her Anglo-Norman French source, Hull writes that it is unnecessary for readers to follow the linear arrangement of the text. Instead, they should negotiate the text according to their needs and interests: ‘Nere it nedyth allweys to begyn at euery tyme at the begynnyng hereof but þer as hym best lykyth and hath most devocyon to rede’, and adds, ‘by cause the redyng shold not turne hem to enoye for to long redyng’. That is, Hull suggests to readers that starting at the beginning is not an absolute necessity; starting where they most prefer helps produce a reading experience that is not overlong and therefore annoying. Hull thus indicates that devotion can be enhanced through readers’ application of nonlinear apprehension of the text, and nonlinear reading shapes the affective consequences of reading pace. Nonlinear reading thus facilitates deeper understanding of a text by giving the reader a practice through which they can temporally manipulate their experience with the work by adjusting the length of the text and, with it, their reading time. In contrast to the shortness of temporal performance Hull advocates in the *Meditations*, however, her *Commentary* demonstrates an alternative approach focused on lengthening text and
time. Hull achieves this by taking a single verse, and on occasion a single word of one of the penitential psalms, and expounding on it at length. Thus Hull’s commentary on verse 1 of Psalm 6 extends from folio 7r of the manuscript to f. 8r, from lines 275 to 314 of the commentary. Hull derives this practice from the source she translates; in making it accessible to the reader of Middle English, her text exemplifies and performs temporal manipulation for readers in ways that extend their engagement with the text of the psalms. Explication becomes a temporal practice that influences readers’ devotional experiences.

Such temporal manipulation further converges for readers of the Commentary through their awareness of Christian history, brought forth into the present by the texts of the psalms. This convergence is enhanced not by the work of the reader alone, but also by textual references to such history, as when the commentary for Psalm 6 discusses how the psalm reflects events from the life of David. Hull also provides encouragement that heightens still further how other types of participation may contribute to readers’ understanding of the psalms, as for example when she leads into a discussion of Psalm 6:1 with, ‘Then lete ous al crye as he dyd, Domine ne in furore tuo’ (275). Readers may join in with the text more profoundly if they vocalize their reading, joining in with David himself and a virtual community of other readers engaged in the same act. In this way, temporal participation converges with readers’ temporal perception of history to affect the readers’ awareness of the relationship between moments of Christian history. Hull shapes her text in such a way as to encourage readers’ expression of agency through temporal participation, and shapes that agency to produce a particular devotional effect of affective response, for temporal reading becomes a means for furthering affective response to the text through the encouragement of vocal reactions to reading the text. In this way, the reader’s time converges with David’s time through the unifying medium of the voice.

One further detail related to the Commentary deserves note for how it implicates the afterlife of the reading practices enjoined upon readers through their temporal apprehension of the text. Eleanor Hull is atypical both in her role as a woman translator writing in late-medieval England, and also because a probate copy survives of her will. She wrote the original copy in 1458, as the will states, ‘with myn owne hande’. It thus authoritatively speaks to what Hull thought important to bequeath to others without the intermediating influence of another writer’s composition of
the document. Most relevantly, her will refers to several books in Hull’s ownership. She bequeaths all of them to her spiritual director, Robert Housewife, an ordained priest and long-term friend of Hull’s who lived nearby the abbey at Sopwell manor. She writes, ‘Also I bequeethe to my fader Housewyf my greet portous and my litel portous and my sauter… Also I bequethe my fader Husewyf my blue bible of Latyn’ (203–4). Hull directs that a large breviary, a small breviary, a psalter, and a Latin bible be given to Housewife. Striking in their absences are references to Hull’s *Commentary* or *Meditations*. Hull mentions these four books alone, and no other books, papers, or written documents of any kind. The absence is telling particularly given her gifts to Housewife, who in his role as friend and priest might be most interested in possessing copies of Hull’s works on spirituality. The absence of any reference to written texts further suggests that, at the time of her death, Hull may not have owned a copy of the works she had translated several decades before. This absence of reference to surviving copies of Hull’s works in her own possession casts an interesting light on how medieval writers may have viewed their literary output. While it may comment on the expense of paper and parchment exceeding what a writer might wish to spend simply to retain a copy of their work, it also suggests that writers may have focused less on retention and ownership of what was only beginning to be thought of as their intellectual, creative property, and more on the value of its circulating in copies that could be read by others.

Yet in considering Hull not only as a writer, but also as a reader, the will provides further insight about the application of the reading practices discussed here. That is, three of the four books Hull mentions – the breviaries and the psalter – collected the psalms as their centrepieces. Hull clearly harboured an ongoing and intense interest in reading the psalms. That Hull maintained multiple manuscripts collecting the psalms, but may not have retained a copy of her own translation of commentary on the psalms, suggests that maintaining a copy of the *Commentary* may also have been unnecessary to her not only as a writer, but also as a reader. If Hull’s practice may be indicative of other readers’ practices, then learning the lessons provided by the *Commentary* rendered continued ownership of a copy less necessary. In this light, reading the *Commentary* effectively entailed learning its matter so thoroughly that subsequent reading of the psalms in other contexts could evoke the lessons and give application to the practices taught by the *Commentary*. This point is further supported by the text
itself, which does not restrict its explicative work to the texts of the psalms themselves. Indeed, matters like how a title functions are also explained. Such treatment of the role of titles suggests that Hull anticipated the work would be accessed by unsophisticated readers for whom the explication of the paratextual function of a title was new information. It also suggests that Hull expected readers would need this explanation because they would encounter psalms in other places bearing titles unaccompanied by explanation. In other words, readers of the Commentary were expected to read psalms again in other contexts, bringing to those subsequent acts of reading the lessons and practices modelled and guided by the Commentary. These lessons and practices include both the substance of the commentary, and also its practice of temporal performativity. Readers apprehending the psalms in other contexts could thus focus on them in ways that involved their now-practised manipulation of time, dwelling over and lengthening the experience of a text, and considering how the convergence of the psalms’ many temporalities reminded readers of their place in history. Such convergences would also serve to remind readers about their place in Christian temporalities. These Christian temporalities look in the present moment always to the past in order to anticipate the future, and perceive time as both circular and linear, repeating and simultaneously always on the cusp of rupture through the expectation of linear history brought about by the Second Coming and Apocalypse.

Another mode of temporal participation emerges in the act of rereading. In his Ordinal of alchemy, Thomas Norton depicts his interest in reading practices when he threatens his readers with alienation from God should they change even ‘oon sill-able’ of his text. Instead of changing the text, he explains, they should reread it: ‘Therfore trust not to oon reding or twine, / But xx. tymes it wolde be ouer-sayne’ (176–7). Re-engaging a work through rereading it invests and engages readers in a process of temporal extension. This extension of duration is not meditative or affective in its practice as that afforded by temporally reading the psalms in the ways described above, but intellectual. Norton emphasizes this function of reading temporally when he explains that his work ‘conteynyth ful ponderose sentence’ best understood by reading ‘many bokis, & then this with-alle’ (178, 181). While Hull and the translator of the Pseudo-Augustinian soliloquies seem to have found rereading conducive to experiences of boredom and annoyance, Norton is not alone in encouraging rereading and thus
encouraging temporal participation through re-engagement with a text. Similarly, while the majority of emendation invitations are located in prologues or otherwise near the beginning of a text, some are located near the end, which provokes rereading as a strategy of corrective reading. Corrective and temporal reading intersect in the practice of rereading, further nuancing the work of readers’ participation.

The temporal performance of rereading is multiple and varied; it affects and is effected by readers in many and different ways. For example, reading performs temporal convergence. By rereading, the reader moves forward in interpreting the text while looking backward to passages already encountered, recalling in the present the knowledge gained through past reading. Readers thus, through rereading, create a personalized temporal experience. Furthermore, considering rereading in terms of temporal structure points to how rereading is, in a way, a participatory temporality of productive disruption: rereading disrupts linear engagement with a text by introducing knowledge gained through previous acts of reading, and relies on that knowledge to transform the reader’s present engagement with the text. Temporal participation applied to rereading thus applies a kind of palimpsest effect to reading the text, in which the recollection of previous readings layer over each other and the present text. This palimpsestic experience of reading is not exclusive to rereading, however; it collects with it, as Norton points out, not simply a rereading of a single text from a single moment, but the application to a text of the ‘many bokis’ a reader has apprehended over many occasions. Commentaries of the psalms overlay subsequent readings of the psalms, and readers bring to the twentieth reading of the *Ordinal of alchemy* every insight gained over the previous nineteen readings, layered over and under and overlapping with any other reading accomplished between and since previous rereading. Such reading is simultaneously focused on memory and temporality, using memory as the vehicle through which multiple times of reading and the multiplicity of things learned converge in the present moment of reading, applied to the present text. Consequently, the temporality of rereading emerges as a productive process, deepening readers’ understanding of the text, and contributing to the readers’ intensive engagement with it.

Finally, temporal participation in late-medieval England – whether enacted through manipulation, orientation, or rereading – provides readers with strategies for shaping their affective and
intellectual responses to texts. Furthermore, temporal participation also invites consideration of the processes of historicizing the self through reading, in which reading provokes confrontation of multiple temporalities, such as the grand historical narrative of Christianity, but also with more private, local temporalities like those developed and experienced by individuals recalling their own histories as readers. At the same time, writers sought to shape temporal reading toward particular ends, thus contributing to the effort to educate England’s growing audience of readers. Yet, even as writers sought to shape such reading experiences, and with them develop particular reading practices that built towards intensive engagement with texts, readers could nevertheless exercise their agency to counter such practices, or engage with a text by not reading it at all.

Lewin (Ithaca: Cornell University Press, 1983), where Genette discusses the difficulty of measuring the “duration” of a narrative to that of a story’, which is a difficult endeavour ‘for the simple reason that no one can measure the duration of a narrative. What we spontaneously call such can be nothing more … than the time needed for reading; but it is too obvious that reading time varies according to particular circumstances, and that … nothing here allows us to determine a “normal” speed of execution’ (86). However, the inability to determine a ‘normal’ speed of
reading did not stop late-medieval writers from seeking to manipulate it nevertheless, as will be discussed here.

6 Ibid., 136. Eskelinen’s work has shaped discourse on temporality in new media for years, and still reflects the pervasive influence of second-wave digital media criticism, which sought to distinguish the practices of new media as a rupture from previous practices.

23 My use of ‘rhizomatic’ here follows development of the term in Deleuze and Guattari’s A thousand plateaus, referring to a non-hierarchical assemblage. The term has also been usefully explored in medieval studies in relation to manuscript studies, as providing an alternative to the traditional stemmatic view of manuscript relations; see Michael G. Sargent, ‘Organic and cybernetic metaphors for manuscript relations: stemma–cladogram–rhizome–cloud’, in The Pseudo-Bonaventuran lives of Christ, ed. Johnson and Westphall, 197–263.

27 For a discussion of the performativity of the penitential Psalms in Hull’s and other versions, see Anne Sutherland, ‘Performing the

28 Text of the will is included in Barratt’s edition of *The seven Psalms*, 203–4, at 203.

30 ‘Palimpsestic reading’ is a concept developed by Inge Boer, who argues that analysis of palimpsestic reading helps identify stereotypes in contemporary French culture; see *Disorienting vision: rereading stereotypes in French orientalist texts and images* (Amsterdam and New York: Rodopi, 2004), 18–19. Although anachronistic in its application to contemporary society, the palimpsest metaphor seems particularly apt as a way of describing the effects of reading temporally in late-medieval England. It is also worth noting that explicit instructions in any reading practice can reflect stereotypes about its audience, as I note in Chapter 2.
Conclusion
Nonreading in late-medieval England

Through emendation, nonlinear apprehension, materiality, and temporality, late-medieval readers in England enjoyed access to a diverse number of reading practices that invited and positioned their participation as central to the making of meaning. Suffusing these practices, medieval understandings of the body, of architecture, of mobility, and of space indicate a recognition of reading as an intellectual activity intensely physical, embodied in its practice. The materiality not only of the textual medium itself, but also of readers and the spaces they inhabited while reading, impacted reading experiences in profound ways.

In explicitly inviting, modelling, or discouraging such practices, writers considered what it meant to be a reader even as their understanding of what it meant to be a writer underwent change influenced by altering notions of their own authority and, eventually, the printing press. They determined that readers could indeed participate in the creation of meaning, and guided their audiences towards the types of reading practices that did not require formal university education or universal literacy. To the writers who elicited and modelled interactive, participatory reading practice, reading and writing were not only viewed as complementary activities; they were also activities that could involve the same work, the same practices, although different in scale. Both writers and readers engaged in emendation; writers relied on nonlinear reading to construct the structure of their works; they inserted themselves into the narratives they composed even as they invited readers’ own participatory contributions. To be a reader in England of the late fourteenth to early sixteenth centuries was to be understood as acting like a writer.

In this context, it can be useful to Hoccleve’s friend who, as discussed in the Introduction, prompts the addition of a moral to Hoccleve’s translation of ‘Jereslaus’ Wife’. The friend can be
situated firmly within the category of participatory reader, even as he contributed in a writerly way the moral to Hoccleve’s poem. His participation with Hoccleve’s texts involved interactions that shaped the final form of the work, and even motivated an addition to the work— but did not demonstrate the authority that had begun to characterize the identity of the writer. His additions were presented to Hoccleve, suggested to him, and accepted or rejected by Hoccleve as author. Hoccleve’s Dialogue offers a compelling portrait of a participatory reader. Hoccleve shares an interest in such with many other writers of the time. In the words of Thomas Usk, who, writing in the late fourteenth century, exclaimed that he desired not simply a good reader, but ‘coveite[d] and pray[ed for] a good book-amender, in correccion of wordes and sentence’, the participatory reader could offer much that writers viewed as beneficial. Nevertheless, that particularly desirable type of reader necessitated training and accommodation in order to engage most productively with the writer’s work. This training could start with activities as straightforward as assessing the metre of a line to judge whether any words might have been altered and, in their alteration, complicate the metre. Such readers needed both the encouragement to recognize themselves as capable of contributing to texts in transmission and interpretation, and the training that could make those contributions most effective. Writers, including Usk, Lydgate, Caxton, Hull, Skelton, and others, turned to participatory reading practices to facilitate the encouragement of this thoughtful, contributory reader.

Participation thus develops through discourse and reading practices as a fundamental aspect of the work of ideal readers, whom writers sought to encourage, train, and constrain. Readers could participate through how they negotiated texts; how they responded to them physically, intellectually, and emotionally; how they identified with a narrative or a character; how they related to the text’s material qualities or its material surroundings; and how they related to them temporally. Further forms of participatory reading, such as question poems and other ludic works, and immersion such as that promoted in medieval devotional reading and experienced today when playing most video games, could also invite participation. Participatory practices, accordingly, fostered a literary culture of exchange and community. By emphasizing participatory reading strategies, writers encouraged readers, or subsets of their readers, to practice or enact particular responses. Such writers’ interest in and reliance upon readers’ participation cannot be
understated in its consequences: The elicitation of readers’ participation represents the work of readers as mattering. Participatory readers mattered because their work made a difference – to the text, to its interpretation, and even, sometimes, to the writer.

That readers’ work mattered points to a significant change from the older discourse of the ‘learned’ and the ‘lewid’, the Latinate, literate, highly educated writers confronted by readers characterized by their ignorance of Latin, which ignorance betokened their scant claims to literacy. In the culture of the learned and the lewid, readers were perceived as scarcely able to participate with writers, let alone contribute in ways that mattered. This change, from that of the lewid vernacular reader whose contributions engendered little consideration, anticipation, or accommodation, to the participatory vernacular reader, speaks to how writers perceived the possibilities of their growing vernacular audience whose literacy practices were at the same time increasing in sophistication. As Katharine Breen has argued, writers from the twelfth century onwards sought to shape lay readership. Writers focused on how to inculcate amongst this audience ethical self-ordering, a project Breen sees as demonstrated most spectacularly in *Piers Plowman*. Yet the inculcation of a self-regulating framework did not suffice to address all the needs that, by the fifteenth century, writers viewed readers as facing. Nor did it address how writers began to see readers as offering valuable work complementary to their own. In consequence, participation emerges to flourish in discourse and practice. Focusing on participation thus underscores a concept of readers and reading in late-medieval England that treats readers as partners in the making of meaning. Recognizing readers as participatory partners thus enriches the portrait of late-medieval literary culture with which we engage. Even as it has become a given that late-medieval writers explored notions of authorship and authority that move them closer to the modern (and Romanticized) notion of the author as the sole creative force for a work, exploring participatory reading acts as a counter, for participatory reading practices demonstrate a collaborative model of meaning-making in which both writers and readers contribute to the creation and interpretation of literary works.

Nevertheless, not all writers viewed readers as able to respond with such positive contributions, or viewed readers as useful or desirable for their potential to provide such. Chaucer – who restricts encouragement of his texts’ emendation to a closed audience, who elsewhere seems particularly fixed on enlarging the
Participatory reading in late-medieval England

authority of the writer – offers intriguing counter-portraits of a different type of reader and a different type of reading. His portraits, illustrated in *Troilus and Criseyde* and the Prologue to the Wife of Bath’s Tale, is that of the nonreader. Considering nonreading alongside the reading practices previously discussed shows how late-medieval attempts to shape reading represent, in some ways, repeated attempts to avoid flirting with futility. No matter what writers recommended to readers, and no matter how strenuously they sought to safeguard against undesirable reading practices, readers could nevertheless choose to act on the very agency that many writers desired to harness to their own ends. Readers could even read by choosing not to.

Addressing what readers might do and how they might relate to texts, the book historian Leah Price asks, what ‘would it mean to study books without privileging reading?’ For Price, one way to answer this question lies in considering what she calls the ‘nonreading’ work of books. Considering ‘nonreading’ is to examine not only reading, but how books were handled (in which something is done to the book) and circulated (in which something is done to other persons by means of the book). Price’s concept of nonreading adds another angle to studying the history of the book and reading. The concept of nonreading also invites analysis that attends to the arguments of object-oriented ontology and new materialisms. As studying nonreading involves attending to the material nature of books, moments of nonreading demonstrate how the book as matter performs its own reading and its own narratives even as it interacts with humans and nonhumans alike, affecting their reading of and participation with a text.

In this context, two moments of participation figured around textual objects in Chaucer’s works call for particular attention. As one of the examples focuses on a letter rather than the book, expanding Price’s focus from the book to textual objects considered more broadly not only encompasses the examples discussed below, but also emphasizes how often reading experiences in medieval culture can be identified outside the covers of manuscripts through other engagements with textuality, from wall texts and subtleties to documents.

The first example of nonreading to consider comes from *Troilus and Criseyde*. Pandarus and Troilus have begun to collaborate in their efforts to persuade Criseyde to acknowledge and respond to Troilus’s professed love for her, although Criseyde proves hesitant. Abandoned by her father who has left Troy to join the
Greeks encamped outside its walls, Criseyde lives isolated from the nominal power structures of the city even as she also enjoys a degree of independence. The moment of nonreading develops when Pandarus passes the first letter from Troilus to Criseyde in Book II. In Price’s terms, this moment falls into the category of nonreading circulation, in which the text object acts on a person. The events leading up to the letter exchange are also significant for our understanding the letter’s eventual nonreading moment. Pandarus has previously informed Criseyde of Troilus’s love for her and encouraged her to love him in return. He has also coached Troilus in his letter-writing skills, instructing him to blot the letter with his tears. Troilus, having followed these instructions, kisses the letter. At that moment he acknowledges the letter as an agential object, saying, ‘Lettre, a blissful destine / The shapyn is’.

That is, Troilus views the letter as possessing the ability and power to enact change in Troilus’s destiny.

The moment of nonreading occurs when Pandarus conveys the letter to Criseyde. It is at this point when he hands it over that the situation becomes a little strained: as Chaucer writes, Pandarus meets with Criseyde in a garden with other people about, and there he, ‘hente hire faste, / And in hire bosom the lettre down he thraste’ (II.1154–5). He seizes Criseyde and thrusts the letter down the front of her dress. The language here is striking in its connotations – through ‘hente’ and ‘thraste’ – of violence. What this moment of nonreading demonstrates is how the letter acts as a textual object that does not simply stand in for or communicate Troilus’s desire to form a relationship with Criseyde. Instead, it disquietingly exceeds that meaning through the language of seizure, assault, and injury that echoes through the letter’s movement. Facilitated by Pandarus, the letter here asserts a violent, sexualized authority over Criseyde’s body, acting not only as a communicative object and love-token, but as assailant. This work of the letter thus queers Criseyde’s body as the two intermingle, destabilizing Criseyde’s bodily privacy and independence. In this way, analysing the work of nonreading in this scene shows how the letter compromises Criseyde’s bodily autonomy, thus undermining her earlier claim that ‘I am myn owene womman’ (II.750). This loss of autonomy elicits Criseyde’s compliance to the demand of Pandarus that she read and respond to the letter. It represents a loss of autonomy further emphasized and extended by later events in the poem. It also represents reading gone awry, in which the rejection of reading proves as problematic as reading could also
be. Consequently, nonreading demonstrates the dangerous possibilities of participation. Both reading and nonreading can provoke destabilization, suggesting that engaging with texts cannot always be relied upon as a benefit to readers.

The second example of nonreading comes from the Wife of Bath’s prologue: that moment in which Alison, realizing that her fifth husband, Jankyn, will never cease to read to her from his book of wicked wives. She grabs the manuscript and, as she explains, ‘Al sodeynly thre leves have I plyght / Out of his book’ (790–1). She abruptly wrenches three pages from Jankyn’s anti-feminist anthology. This moment of nonreading not only represents what Tom Shippey has referred to as an example of bibliophobia, but further distinguishes additional perspectives regarding human relationships to books. In ripping apart the book, Alison uses it as an object whose state speaks to and fuels her disagreement with her husband. Strained and disrupted, the book’s material state represents the emotional and intellectual state of their marriage. In addition, reframing this moment of nonreading to examine it not from a human perspective, but from the perspective of the book, shows how the book has become a victim of their marital disputes: in effect, readers witness the victimization of the book. The blame for disturbing misogyny falls upon it first, and Alison responds to harm and silence it. This example of nonreading also demonstrates how nonreading functions as an act of resistance to instruction. How writers – and even other readers – wish readers to participate may not necessarily suit the interests or welfare of those readers. Nonreading provides a participatory counter-practice to participatory reading. In the practice of nonreading, the reader exerts independent agency to oppose and even defend herself against the imposition of others’ agendas.

Furthermore, the body of the book acts as a surrogate for and prologue to the violence Alison immediately perpetrates upon Jankyn’s body: just after she rips out the pages, she explains that she, ‘with my fest so took hym on the cheke / That in oure fyr he fil bakward adoun’ (792–3). Violence to the book’s body prefigures violence to Jankyn’s body. In its surrogate representation of violence, and in the way that the book engenders Alison’s violent response, the book in a moment of nonreading also becomes weaponized. From it springs forth further violence. Both Troilus’s letter and Jankyn’s book demonstrate how textual objects can function not as objects of reading, but through the hands of non-readers as agents of victimization, ones that threaten the integrity
of Criseyde’s and Jankyn’s bodies. Nonreading demonstrates how it, too, can be an embodied practice. Even as reading can evoke and require the embodied participation of readers, nonreading can reflect on the embodied possibilities of texts themselves in their material forms. The work of reading, in its nonreading practice, is thus not restricted to the cognitive, intellectual realm alone. Perhaps most importantly, Chaucer’s depictions of nonreading remind audiences of writers and readers in the Middle Ages and today that, as much as medieval writers might have desired to prompt particular types of reading practice, they had to recognize the effects of the agency of readers that they sought to utilize for their own ends: possessed of independent agency, readers could always disregard whatever guidance writers sought to offer them in order to read and use texts for their own ends.

Included in the category of nonreading practice is a host of other acts. In particular, readers who wrote their names in their books mark moments of nonreading. Nonreading is also marked by doodles drawn by readers in the margins and flyleaves. Many such examples of nonreading can be seen in the margins of University of Chicago MS 564, a copy of the *Canterbury Tales*. It is liberally adorned with the names of several owners, primarily from the sixteenth century. Such inscriptions of identity have been adduced both as evidence of ownership, and also as evidence of particular attachment to the text. However, in the act of inscribing a name, the person writing it does not read, but is involved in an act of nonreading. The signature thus displays a conspicuous moment in which the writer did not pay attention to the text.

Doodles can operate similarly. In the margin of MS 564, f. 37r, someone penned a doodle of an inquisitive, bearded face. Above it has been written, perhaps by the same person, ‘Ryght worshepfull’, as if testing a possible letter salutation. Margins of manuscripts were often favoured for this purpose. In Oxford, Bodleian MS Selden supra 53, a collection of Hoccleve’s poems and Lydgate’s *Danse macabre*, the figure of a happy man, waving, has been drawn in dry point opposite a stanza from Hoccleve’s ‘Complaint’ on f. 78r, and numerous other skeletal faces in dry point appear on folios 54r, 73r, and 97r. In a mid-fifteenth-century copy of Lydgate’s *Fall of Princes*, a reader turned the manuscript sideways to explore a possible letter salutation in its left margin, ‘to ^ my moste very frynde in Rygarde and to’ on f. 22v, and later, on f. 45r, partway through a description of the rule of the Israelite king Rehoboam, a reader has added in the bottom margin ‘forget noth’ above a set
of entwined initials, which treats the book as a long-lasting monument recording what was presumably an affectionate relationship.\(^9\) Although it is possible that a person, searching for a writing surface, simply picked the manuscript up, turned to a random page, and penned their name, initials, or a drawing, it seems more likely that examples like these readers’ marks emerge in moments when the manuscript initially had been employed for reading. Readers read with dry point or pen in hand, or pen and ink nearby, perhaps intending annotation. Instead, they elected to do something other than attend to the text. Perhaps distracted, perhaps thinking of other matters, perhaps even bored, a reader stopped reading. Yet this reader continued to use the book. However, the reader’s use of it reflects a purpose other than reading. Such signatures, doodles, and marginalia ostentatiously mark moments when readers exerted their agency to escape the guidance of writers and instead pursue their own interests, leaving behind their own nonreading commentary.

In the hands of those nonreaders writing their names, texts were not in that moment of inscription sources of instruction. Instead, the object of the text provided a material vehicle for memory and identity. In the hands of doodlers, margins and flyleaves become spaces for play. Additionally, these moments of nonreading indicate how easily readers could turn their pens to other ends, how easily they could move between the role of ephemeral reader and the role – however mildly expressed – of contributor. In this role, they provided something to be read by later audiences, something that would compete with an author’s words, even Chaucer’s words, for the attention of subsequent readers. Acts of reading could also prompt resistant marginal commentary, as when John Shirley comments on Lydgate’s misogyny in the *Mumming at Windsor* to exclaim, ‘A daun Iohan, est y vray?’, and the scribe of Lydgate’s *Fall of Princes* in Harley 2251 disgruntledly addresses Lydgate in the margins, ‘Be pees I bidde yow’, ‘Ye wil be shent’, ‘Ye haue no cause to say so’, ‘Ye gete yow to thank’, and ‘Be pees or I wil rende this leef out of your book’, and then comments on the reactions of future readers when adding, ‘There is no good woman that wil be wroth ne take no quarrel agenst this booke as I suppose’.\(^{10}\) The book whose materiality is so necessary for corrective reading, whose organization prompts emotional and intellectual responses to the tales, whose temporalities elicit readers to situate themselves in particular historical or fictive moments, becomes also a space for readers to assert themselves, their individuality, and their
responses. Such moments of nonreading and resistant reading marked by marginal commentary further contribute to readers’ avenues for self-assertion and resistance. Such responses demonstrate the degree to which writers’ attempts to guide and influence readers could represent flirtations with futility.

These responses additionally highlight how much more strictly controlled the seeming liberatory digital media of today can be. A reader of a web page can only click on links provided, or abandon it altogether. They can only alter the text of pages, or leave comments or notes behind, when those pages provide an interface specially designed to accept, record, and publish such remarks. In other words, the materiality of the manuscript and print book enabled responses from readers to be noted regardless of writers’, scribes’, or printers’ plans, whereas it takes specialized design or add-on applications to enable readers to comment similarly on digital material, making the affordance of such participation part of or absent from a digital work’s planned design. Yet both medieval writers and readers and those of today’s digital media engage in exploring ways to relate to each other across the divide of time and space and community occasioned by the dissemination of texts to and beyond the writer’s initial audience. Finally, examining these long histories of the book, and the long histories of reading embedded within books and related textual media, demonstrates how complex and easily overlooked can be the practice of reading itself. In the academy today, reluctance and hesitance often emerge around the subject of critical reading as questions about its nature and function continue to arise: What is critical? What does it entail? What does it privilege, and what does it obscure? What are its benefits? While exploring ways of answering these questions, it can be useful to keep in mind that these questions have been asked for hundreds of years, in periods that witnessed greater challenges facing literary reading, and literary culture, than those we confront today. Not too many years ago, the National Educational Association in a series of studies first concluded that ‘Reading [was] at Risk’, then discovered that ‘Reading [was] on the Rise’, a determination that was subsequently determined to represent a ‘New Chapter in American Literacy’.11 This arc, from the disappearance of reading to the realization that it had not failed nor disappeared, but simply been practised in application to unfamiliar media, in unfamiliar places, and in unexpected ways, is one worth remembering when evaluating reading not simply today alone, but also in the late Middle Ages.
Notes

2 See, for example, Kimberly Bell’s essay, “‘Rounes to rede’: ludic reading games in the alliterative wheel of fortune poem Somer Soneday”, in Games and gaming in medieval literature, ed. Serina Patterson (New York: Palgrave, 2015), 169–86. Bell usefully summarizes key contributors to the discussion on literary games in offering a definition of literary games as ‘played by willing participants (the reading and listening audience members) who engage in a contest with the author (a game of interpretation) to achieve a certain outcome (discovering the message of the poem)’ (174). Although the study of literary games exceeds the scope of this project, it is worth emphasizing that the literary game depends centrally upon readers’ participation. A literary game without a participating reader is incomplete, existing as a game only in potential. As with the forms of participation discussed here, to achieve a successful game requires readers to be guided towards particular actions or interpretations. Thus literary games also give rise to dependency on readers’ agency that is in some way controlled or limited. For another approach to literary games that bridges the digital–literary divide, see Anastasia Salter, What is your quest? From adventure games to interactive books (Iowa City: University of Iowa Press, 2014) and Marie-Laure Ryan, Narrative as virtual reality: immersion and interactivity in literature and electronic media (Baltimore: Johns Hopkins University Press, 2003).

1438–9  John Lydgate  *Fall of Princes*  
I shal procede in this translacioun,  
Fro me auoidyng all presumpcioun,  
Lowli submyttyng eueri hour & space  
Mi reud language to my lordis grace. (438–41)
Yiff ought be wryte or seid to your plesaunce,  
The thank be yove to your royal noblesse;  
And wher I faylle, atwyteth ygnoaunce,  
Al the diffautys aret to my rudnesse,  
With this annexyd, requeryng of humblesse,  
That alle thoo which shal this makyng rede,  
For to correcte wher-as they se nede. (3373–9)
To alle thoo that shal this book be-holde,  
I them be-seke to haue compassyoun,  
And ther-with-al I prey hem that they wolde  
Favoure the metre and do correccyoun. (3394–7)  

1440  Translator’s epilogue to Palladius on Husbandry  
Good hope is reste and al yit shal amende  
Theron y treste And al this longe yeer  
Of husbondrie in hast y thynke anende  
The forme book is doon and Ianyueer  
And lo my lord in honde hath ffeueryeer  
Wul he correcte by what have y to done  
He wul doon as a lord Thenne aftir heer  
Asfaste y thynke on sette At Marchis mone (bk III)
1440 John Capgrave *Life of St Norbert*

> ȝe noble men, if þat ȝe list to race
> Or rende my leuys þat I to ȝou write,
> ȝe may weel doo it; I schal ȝou neuyr wite.
> In ȝoure correcioun put I þis matere
> For I wil sewe & translate þis story,
> And wele I wote ȝoure hertis be so clere,
> So ful of charite withouten trechery,
> ȝe wil not put on me no vyleny,
> But I deserue it, and þat schal I nowt,
> As I hope, neythir in speche ne þowt.

(lines 19–28)

1440–60 Richard Roos *La Belle Dame Sans Merci*

> And specially, let this be thy prayere
> Un-to hem all that thee wil rede or here,
> Where thou art wrong, after their help to cal
> Thee to corecete in any part or al.

(832–5)

c. 1447 John Russell *Boke of Nurture*

> Go forthe lytelle boke, and lowly þow me commend
> vnto alle yonge gentilmen / þat lust to lerne or entende,
> and specially to þem þat han exsperience, praynge þe[m] to amende
> and correct þat is amysse, þere as y fawte or offende.

(1235–8)

1448 Thomas Hoccleve ‘Balade to My Lord of York’

> If þat I in my wrytynge foleye,
> As I do ofte (I can it nat withseye,)
> Meetrynge amis / or speke vnfittingly,
> Or nat by iust peys / my sentences weye,
> And nat to the ordre of endytynge obeye,
> And my colours sette ofte sythe awry,
> With al myn herte wole I luxumly,
> It to amende and to correcte, him preye;
> For vndir his correccioun stande y.

1484 William Caxton *The royal book*

Thenne I exhorte & desire every man that entendeth to the proufft & seluacyon of his soule / to ouer see this sayd book / in which he shal fynde good & proufyttable doctrine by which he may the rather attayne to come to everlastyng blysse & alway what that is wryton is under correctyon of lerned men / humbly besechyng them to correcte & amende where as is ony defaute. & so doying they shal dolo a merytory dede. For as nyghe as god hath gyuen me connyng I haue folowed the copye as nyghe as I can.

1485 William Caxton *Charles the grete*

From the prologue:

I haue emprysed and concluded in my self to reduce this sayd book in to our englysshe / as all alonge and playnely ye may rede / here / and see in thys book here folowynge / besechyng al them that shal fynde faute in the same to correcte and amende it / And also to pardon me of the rude & symble reducyng

From the epilogue:

I haue put me in deuoyr to translate thys sayd book as ye heretofore may se al a longe and playn / prayeng alle them that shal rede / see or here it / to pardon me of thys symple & rude translacyon and reducyng / besechyng theym that shal fynde faute to correcte it / & in so doying they shal deserue thankynges / & I shal praye god for them.

1487 William Caxton *The book of good maners*

Prayeng al them that shal rede & here it to correcte where as they fynde faulte and to holde me excused of the rude & vnparfyght englysh.

1489 William Caxton *Fayttes of armes*

And where as I haue erryd or made defaulhte I beseche them that fynde such to correcte it & so doyng I shal praye for them.

1490 John Ireland *Meroure of wyssdome*

And Souerane lord þis werk I haue studiit and maid with gret laubour and submittis it to þe correccioun of þe halykyrk and me alsua / and to þe correccioun of þe kyrk of rome and all vthir / hat the correccioun of fautis pertinis to / bot I traist and it be correk writtin þar is na herrecy na errour in it bot þe haly doctrine of ihesu and verite.

1490 William Caxton *Eneydos*

But I praye mayster John Skelton late created poete laureate in the vnyversite of Oxenford to ouersee and correcte this sayde booke. And taddresse and expowne where as shalle be founde faulte to theym that shall requyre it. […] Then I praye hym & suche other to correcte ade or mynysshe where as he or they shal fynde faulte / For I haue but folowed my copye in frenshe as nygh as me is possyble / And yf ony worde be sayd therin well / I am glad. and yf otherwyse I submytte my sayde boke to theyr correctyon.

| 1505–6 | Stephen Hawes       | *Pastime of pleasure* | Vnder obedyence and the correccyon  
Of you my maysters experte in connynge  
I me submytte now with hole affeccyon  
Vnto your perfyte vnderstondynge  
As euer more mekely to you inclynynge  
With dylygent laboure now without doubtaunce  
To detray or adde all at your plesaunce. (2926–33)  
Vnto all poetes I do me excuse  
Yf that I offende for lacke of scyence  
This lytell boke yet do ye not refuse  
Though it be deuoyde of famous eloquence  
Adde or detray by your hye sapynce  
And pardon me of my hye enterpryse  
Whiche of late this fable dyde fayne and deuyse. (5796–5802) |
| 1510–20 | John Bourchier (Lord Berners) | *Arthur of Little Britain* | I truste my symple reason hath ledde to the understandynge of the true sentence of the mater, accordinge to the whiche I have followed as nere as I coude, desyrynge all the reders and herers therof to take this my rude translacion in gre, and yf any faute be, to laye it to myn unconnynge and derke ignorauce, and to mynysshe, adde or augment as they shall fynde cause requysyte. And in theyr so doynge I shall praye to God that after this vayne and transytorly lyfe he may brynge them unto the perdurable joye of heven. |
| 1513 | Henry Bradshaw       | *Life of St Radegund*  | Therfore I require / and pray you euerychone  
That this litell treatyse shall reed or se  
To accept my mynde with your discrecion  
And it to correct after your charite  
Amende the mater / where is necessite  
For syth it is known / that I am no clarke. (64–9) |
